Common Kingsnakes David Perlowin,2012-04-03 This edition of Common Kingsnakes has been revised and expanded to cover several related species. The book is packed with beautiful new photographs showcasing interesting varieties of common species, such as the California kingsnake banana morph, and not-so-common species, such as the bright red Sinaloan milksnake. Common Kingsnakes is an expert-written guide on how to care for your kingsnake. This informative book includes essential topics such as housing, feeding, and breeding. Their beauty, ease of maintenance, and relative docility make kingsnakes one of the most recommended snake species for beginning hobbyists.

Courting the Wild Jamie K. Reaser,2009-05 Do you remember the first time you feel in love? Within these pages you will find love stories, rapturous love affairs with the land, shameless seductions, betrothals, vows exchanged, marriages of the soul, heartaches, partings, healings, and renewals. The authors are the courters and the courted...Their landscape paramours embrace them and they grow forth from within.

Reptiles Kate Hofmann,2016-07-15 This book brings the world of reptiles to life with eye-catching photos and captivating information about turtles, snakes, lizards, crocodiles, and their scaly-skinned kin. Readers will learn how reptiles survive in many habitats, from hot deserts to tropical forests and even under the sea. They'll get an up-close look at reptiles' amazing senses, tricky defenses, and wide variety of strategies for moving around, catching and eating food, and bearing young. What makes a reptile a reptile? (scaly skin, cold-blooded, vertebrates, young look like small adults) Taxonomy (four living groups: turtles and tortoises; lizards and snakes; crocodilians; tuatara) The world through reptile senses (examples of special senses such as snakes' ability to taste air with the tongue and detect infrared heat, chameleons' ability to move eyes independently) Strategies for getting and eating food - some reptiles eat plants (turtles, iguanas), others eat meat. Hunters use many different strategies, including constriction (boas) and venom (many other snakes, gila monster, komodo dragon). Chameleon shoots its long tongue out to catch prey . The egg-eating snake unhinges its jaw to swallow eggs. Defenses - camouflage (chameleons) and mimicry, shells (turtles), venom, warnings (rattlesnake), and specific "wow" examples such as losing a tail (skinks), squirting blood from eyes (horned lizard), and unfurling a giant skin flap around its head (frilled lizard) Adaptations for different habitats - dealing with extreme heat and lack of water (scaly skin keeps water in, thorny devil collects water from dew with grooves on its spikes). Others are adapted for freshwater or marine life, or for life in the trees. Amazing moves - geckos' ability to grip with their feet, "flying" geckos and snakes, basilisk lizard that runs on water. Reproduction - most reptiles lay eggs, a few bear live young; most don't take care of offspring but some do guard eggs or young. Temperature of eggs, rather than genetics, determines whether offspring are male or female. Conservation - threats, endangered species, and a few examples of how people are helping to protect reptiles. Invitations to explore - sidebars throughout give readers tips for investigating reptiles where they live. Fast facts - eye-catching boxes provide information for fact-collectors: the smallest and largest reptiles, the fastest and slowest, the number of species today vs. in ancient times when reptiles "ruled."

State, Federal, and C.I.T.E.S. Regulations for Herpetologists Norman Frank, Erica Ramus, 1994

The Lizard King Bryan Christy, 2009-08-05 Imagine The Sopranos, with snakes! The Lizard King is a fascinating account of a father and son family business suspected of smuggling reptiles, and the federal agent who tried to take them down. When Bryan Christy began to investigate the world of reptile smuggling, he had no idea what he would be in for. In the course of his research, he was bitten between the eyes by a blood python, chased by a mother alligator, and sprayed by a bird-eating tarantula. But perhaps more dangerous was coming face to face with Michael J. Van Nostrand, owner of Strictly Reptiles, a thriving family business in Hollywood, Florida. Van Nostrand imports as many as 300,000 iguanas each year (over half the total of America's most popular imported reptile), as well as hundreds of thousands of snakes, lizards, frogs, spiders, and scorpions. Van Nostrand was suspected of being a reptile smuggler by Special Agent Chip Bepler of the U.S. Fish and Wildlife Service, who devoted years of his life in an obsessive quest to expose The Lizard King's cold-blooded crimes. How this cat-and-mouse game ended is engrossing and surprising.
