Rescue Team Candace Calvert,2013-04-19 Tired of running from her past, nurse Kate Callison intends to become Austin Grace Hospital's permanent ER director and make Texas her home. Despite staff friction, she's moving ahead. Then unthinkable tragedy wraps the ER in crime tape, bringing swarms of media, legal chaos—and a search-and-rescue hero who seems determined to meddle in her life. For Wes Tanner, nothing beats finding someone who's lost; he's known that helpless terror firsthand. So he'll expand his team's lifeline of hope: K9 tracking, swift water rescue, even horse-mounted searches. He's ready for anything—except Austin Grace's prickly and dismissive ER director. As Kate and Wes discover more about each other, new respect becomes something deeper. Kate wonders if her heart might have finally found a home. Then an unsolved missing persons case—and a startling new one—become catalysts that threaten the loss of all she and Wes have found.

Principles of Practice in Multi-Agent Systems Jung-Jin Yang,Makoto Yokoo,Takayuki Ito,Zhi Jin,Paul Scerri,2009-12-11 Agents are software processes that perceive and act in an environment, processing their perceptions to make intelligent decisions about actions to achieve their goals. Multi-agent systems have multiple agents that work in the same environment to achieve either joint or conflicting goals. Agent computing and technology is an exciting, emerging paradigm expected to play a key role in many society-changing practices from disaster response to manufacturing to agriculture. Agent and mul- agent researchers are focused on building working systems that bring together a broad range of technical areas from market theory to software engineering to user interfaces. Agent systems are expected to operate in real-world environments, with all the challenges complex environments present. After 11 successful PRIMA workshops/conferences (Pacific-Rim International Conference/Workshop on Multi-Agents), PRIMA became a new conference titled “International Conference on Principles of Practice in Multi-Agent Systems” in 2009. With over 100 submissions, an acceptance rate for full papers of 25% and 50% for posters, a demonstration session, an industry track, a RoboCup competition and workshops and tutorials, PRIMA has become an important venue for multi-agent research. Papers submitted are from all parts of the world, though with a higher representation of Pacific Rim countries than other major multi-agent research forums. This volume presents 34 high-quality and exciting technical papers on multimedia research and an additional 18 poster papers that give brief views on exciting research.

The Urban Whale Scott D. Kraus,Rosalind M. Rolland,2009-01-01 In 1980 a group of scientists censusing marine mammals in the Bay of Fundy was astonished at the sight of 25 right whales. It was, one scientist later recalled, like finding a brontosaurus in the backyard. Until that time, scientists believed the North Atlantic right whale was extinct or nearly so. The sightings electrified the research community, spurring a quarter century of

exploration, which is documented here. The authors present our current knowledge about the biology and plight of right whales, including their reproduction, feeding, genetics, and endocrinology, as well as fatal run-ins with ships and fishing gear. Employing individual identifications, acoustics, and population models, Scott Kraus, Rosalind Rolland, and their colleagues present a vivid history of this animal, from a once commercially hunted commodity to today's life-threatening challenges of urban waters. Hunted for nearly a millennium, right whales are now being killed by the ocean commerce that supports our modern way of life. This book offers hope for the eventual salvation of this great whale.
