Mathematics for Social Justice: Resources for the College Classroom Gizem Karaali, Lily S. Khadjavi, 2019-07-09 Mathematics for Social Justice offers a collection of resources for mathematics faculty interested in incorporating questions of social justice into their classrooms. The book begins with a series of essays from instructors experienced in integrating social justice themes into their pedagogy; these essays contain political and pedagogical motivations as well as nuts-and-bolts teaching advice. The heart of the book is a collection of fourteen classroom-tested modules featuring ready-to-use activities and investigations for the college mathematics classroom. The mathematical tools and techniques used are relevant to a wide variety of courses including college algebra, math for the liberal arts, calculus, differential equations, discrete mathematics, geometry, financial mathematics, and combinatorics. The social justice themes include human trafficking, income inequality, environmental justice, gerrymandering, voting methods, and access to education. The volume editors are leaders of the national movement to include social justice material into mathematics teaching. Gizem Karaali is Associate Professor of Mathematics at Pomona College. She is one of the founding editors of The Journal of Humanistic Mathematics, and an associate editor for The Mathematical Intelligencer and Numeracy ; she also serves on the editorial board of the MAA's Carus

Explorations in Environmental and Natural Resource Economics R.

Halvorsen, Gardner Mallard Brown, David Layton, 2006-01-01 This volume contains an excellent set of papers by top scholars in environmental and resource economics. These papers span the wide range of topics that characterized the extraordinarily broad and productive career of Gardner Brown. They bring current issues in modeling important environmental policy questions into sharp focus in a way that emphasizes Brown's seminal insights. Richard Carson, University of California, San Diego, US I am glad this book has been written. Gardner is clearly too radical to get a statue and I doubt he would have the patience to sit long enough for the sculptor to finish. Yet Gardner's ideas really deserve remembrance. The editors have managed not only to cover many of the areas and methods Gardner worked with but also to find authors who loved and/or respected him and who have honoured him by providing

high quality work in his spirit. The book is imbued with those curious blends of curiosity and rigour, daring abstraction and yet painstaking attention to detail that are so characteristic of Gardner's work. It was a great pleasure to read. Thomas Sterner, University of Gothenburg, Sweden

Gardner M. Brown, Jr. has been a leading innovator in the development of environmental and natural resource economics. This book comprises essays written in his honor by some of the most distinguished economists working in this field. The principal themes addressed include fundamental theoretical and empirical issues in the valuation of environmental and natural resources; the relationships between economic growth, natural resources and environmental quality; re-evaluation of some standard results in the dynamic modeling of renewable and non-renewable resources; the protection and management of biological resources; and the economics of antibiotic resistance. The original papers within this book will be of great interest to academics and practitioners in the field of environmental and natural resource economics.

Principles of Estimating Trevor Holroyd, 2000-08-11 Current practice on most contracts dictates that the engineer deals with engineering matters and the quantity surveyor covers the commercial aspects. As a result, engineers have become increasingly uneasy at setting rates, evaluating claims and of pricing work generally. This book provides engineers with a sound all round ability and commercial adeptness in price estimating. Author Trevor Holroyd draws on his experience of consulting and professional training in his latest book which will appeal to civil and structural engineers, surveyors, contractors, consulting practices and more.

Rule #1 Phil Town, 2006-03-21 #1 NEW YORK TIMES BESTSELLER • "The clearest and best book out there to get you on the path to riches. This one's

special!”—Jim Cramer, host of CNBC’s Mad Money “Great tools for anyone wanting to dabble in the stock market.”—USA Today Phil Town is a very wealthy man, but he wasn’t always. In fact, he was living on a salary of \$4,000 a year when some well-timed advice launched him down a highway of investing self-education that revealed what the true “rules” are and how to make them work in one’s favor. Chief among them, of course, is Rule #1: “Don’t lose money.” In this updated edition to the #1 national bestseller, you’ll learn more of Phil’s fresh, think-outside-the-box rules, including: • Don’t diversify • Only buy a stock when it’s on sale • Think long term—but act short term to maximize your return • And most of all, beat the big investors at their own game by using the tools designed for them! As Phil demonstrates in these pages, giant mutual funds can’t help but regress to the mean—and as we’ve all learned in recent years, that mean could be very disappointing indeed. Fortunately, Rule #1 takes readers step-by-step through a do-it-yourself process, equipping even the biggest investing-phobes with the tools they need to make quantum leaps toward financial security—regardless of where the market is headed.
