*Books, Bytes and Business* Bill Martin, Xuemei Tian, 2016-04-08 How are businesses responding to global changes in markets driven by changes in technology? Whatever the industry, the trends are familiar: globalization and the rise of industrial conglomerates, mergers and acquisitions, the networking of businesses and markets, outsourcing and shifts in the distribution of resources and production, all reflected in the emergence of new players, new products and services and new forms of competition. As arguably the first knowledge-based business, book publishing provides an ideal setting for the study of challenge and opportunity. The industry is currently experiencing fierce levels of competition, extreme financial pressures, restructuring and the threat of technology-induced obsolescence. Added to these are the challenges posed by new and potential entrants to the market, the emergence of new products and services, new ways of doing business, including trading in virtual markets, and the vulnerability of traditional business models. The suitability of book publishing as a context for

researching the emergence of knowledge-based business becomes all too apparent. Through combining primary research with secondary analysis drawn from the relevant literatures, *Books, Bytes and Business* is both a readable and informative account of business in the knowledge-based economy.

Forecasting Informatics Competencies for Nurses in the Future of Connected Health J. Murphy, W. Goossen, P. Weber, 2017-01-26 Nursing informatics has a long history of focusing on information management and nurses have a long history of describing their computer use. However, based on the technical advances and through the ongoing and consistent changes in healthcare today, we are now challenged to look to the future and help determine what nurses and patients/consumers will need going forward. This book presents the proceedings of the Post Conference to the 13th International Conference on Nursing Informatics, held in Geneva, Switzerland, in June 2016. The theme of the Post Conference is Forecasting Informatics Competencies for Nurses in the Future of Connected Health. This book includes 25 chapters written as part of the Post Conference; a result of the collaboration among nursing informatics experts from research, education and practice settings, from 18 countries, and from varying levels of expertise - those beginning to forge new frontiers in connected health and those who helped form the discipline. The book content will help forecast and define the informatics competencies for nurses in practice, and as such, it will also help outline the requirements for informatics training in nursing programs around the world. The content will aid in shaping the nursing practice that will exist in our future of connected health, when practice and technology will be inextricably intertwined.

**Knowledge Graphs for eXplainable Artificial Intelligence: Foundations, Applications and Challenges** I. Tiddi, F. Lécué, P. Hitzler, 2020-05-06 The latest advances in Artificial Intelligence and (deep) Machine Learning in particular revealed a major drawback of modern intelligent systems, namely the inability to explain their decisions in a way that humans can easily understand. While eXplainable AI rapidly became an active area of research in response to this need for improved understandability and trustworthiness, the field of Knowledge Representation and Reasoning (KRR) has on the other hand a long-standing tradition in managing information in a symbolic, human-understandable form. This book provides the first comprehensive collection of research contributions on the role of knowledge graphs for eXplainable AI (KG4XAI), and the papers included here present academic and industrial research focused on the theory, methods and implementations of AI systems that use structured knowledge to generate reliable explanations. Introductory material on knowledge graphs is included for those readers with only a minimal background in the field, as well as specific chapters devoted to advanced methods, applications and case-studies that use knowledge graphs as a part of knowledge-based, explainable systems (KBX-systems). The final chapters explore current challenges and future research directions in the area of knowledge graphs for eXplainable AI. The book not only provides a scholarly, state-of-the-art overview of research in this subject area, but also fosters the hybrid combination of symbolic and subsymbolic AI methods, and will be of interest to all those working in the field.
