Achieving Teaching Excellence: Developing Your TEF Profile and Beyond Peter Wolstencroft, Leanne De Main, Paul Cashian, 2020-11-12 What does teaching excellence within Further and Higher Education look like? This book takes the Teaching Excellence Framework (TEF) as its starting point. Each chapter identifies one specific aspect of the TEF and, with the help of case studies, guides the reader through innovative teaching strategies and how to overcome challenges that range from digital learning to feedback and assessment. Extensive practical suggestions are offered for the reader to use in their own teaching, all underpinned by a sound theoretical base. Responsive to current debate, topics addressed include: • Widening Participation • Internationalisation • Gaming and simulation • Student employability The entire volume is cross-referenced to both the TEF and the National Student Survey (NSS), meaning readers can easily contextualise what they have read. With higher investment in teaching and learning, and the changing demands and expectations of students, this timely and practical book will help you successfully navigate your teaching career within Higher Education. Peter Wolstencroft is a Programme Leader for Postgraduate Courses at Liverpool John Moores University. His work and research has a focus on the student experience and improving teaching and learning. Leanne de Main is Associate Dean (Academic) at De Montfort University, having held previous roles at other Universities in Academic Development and Quality. Her research centres on widening participation and inclusive curricula with a key focus on access to Higher Education for students from disadvantaged backgrounds. Paul Cashian is Institutional lead for Assessment for the Coventry University Group having previously been Associate Dean in the University's Faculty of Business and Law. He is Principal Fellow of the HEA and has a wide experience of leading innovative change programmes seeking to enhance the student experience.

Introduction to Functional Magnetic Resonance Imaging Richard B. Buxton, 2009-08-27 Functional Magnetic Resonance Imaging (fMRI) has become a standard tool for mapping the working brain's activation patterns, both in health and in disease. It is an interdisciplinary field and crosses the borders of neuroscience, psychology, psychiatry, radiology, mathematics, physics and engineering. Developments in techniques, procedures and our understanding of this field are expanding rapidly. In this second edition of *Introduction to Functional Magnetic Resonance Imaging*, Richard Buxton – a leading authority on fMRI – provides an invaluable guide to how fMRI works, from introducing the basic ideas and principles to the underlying physics and physiology. He covers the relationship between fMRI and other imaging techniques and includes a guide to the statistical analysis of fMRI data. This book will be useful both to the experienced radiographer, and the clinician or researcher with no previous knowledge of the technology.

Plasma Sources for Thin Film Deposition and Etching Maurice H. Francombe, 2013-10-22 This latest volume of the well-known Physics of Thin Films Series includes four chapters that discuss high-density plasma sources for materials processing, electron cyclotron resonance and its uses, unbalanced magnetron sputtering, and particle formation in thin film processing plasma. Chapter One develops a unified framework from which all high-efficiency sources may be viewed and compared; outlines key elements of source design affecting processing results; and highlights areas where additional research and development are needed Chapter Two reviews and analyzes the main types of electron cyclotron resonance (ECR) plasma sources suitable for ECR PACVD of thin films, mainly ECR sources using magnet coils Chapter Three examines the benefits and limitations of the new technique, unbalanced magnetron sputtering (UBM), along with the motivation for its development, the basic principles of its operation and commercial applications, and some speculations regarding the future of UBM technology Chapter Four describes general phenomena observed in connection with particle formation in thin film processing plasmas; discusses particles in PECVD plasmas, sputtering plasmas, and RIE plasmas; presents an overview of the theoretical modeling of various aspects of particles in processing plasmas; examines issues of equipment design affecting particle formation; and concludes with remarks about the implications of this work for the control of process-induced particle contamination

New Horizons of Applied Scanning Electron Microscopy Kenichi Shimizu, Tomoaki Mitani, 2009-11-19 In modern scanning electron microscopy, sample surface preparation is of key importance, just as it is in transmission electron microscopy. Quantitative Magnetic Resonance Imaging Nicole Seiberlich, Vikas Gulani, Adrienne Campbell-Washburn, Steven Sourbron, Mariya Ivanova Doneva, Fernando Calamante, Houchun Harry Hu, 2020-11-18 Quantitative Magnetic Resonance Imaging is a 'go-to' reference for methods and applications of quantitative magnetic resonance imaging, with specific sections on Relaxometry, Perfusion, and Diffusion. Each section will start with an explanation of the basic techniques for mapping the tissue property in question, including a description of the challenges that arise when using these basic approaches. For properties which can be measured in multiple ways, each of these basic methods will be described in separate chapters. Following the basics, a chapter in each section presents more advanced and recently proposed techniques for quantitative tissue property mapping, with a concluding chapter on clinical applications. The reader will learn: The basic physics behind tissue property mapping How to implement basic pulse sequences for the quantitative measurement of tissue properties The strengths and limitations to the basic and more rapid methods for mapping the magnetic relaxation properties T1, T2, and T2* The pros and cons for different approaches to mapping perfusion The methods of Diffusion-weighted imaging and how this approach can be used to generate diffusion tensor maps and more complex representations of diffusion How flow, magneto-electric tissue property, fat fraction, exchange, elastography, and temperature mapping are performed How fast imaging approaches including parallel imaging, compressed sensing, and Magnetic Resonance Fingerprinting can be used to accelerate or improve tissue property mapping schemes How tissue property mapping is used clinically in different organs Structured to cater for MRI researchers and graduate students with a wide variety of backgrounds Explains basic methods for quantitatively measuring tissue properties with MRI - including T1, T2, perfusion, diffusion, fat and iron fraction, elastography, flow, susceptibility - enabling the implementation of pulse sequences to perform measurements Shows the limitations of the techniques and explains the challenges to the clinical adoption of these traditional methods, presenting the latest research in rapid quantitative

imaging which has the possibility to tackle these challenges Each section contains a chapter explaining the basics of novel ideas for quantitative mapping, such as compressed sensing and Magnetic Resonance Fingerprinting-based approaches
