Tectonic Controls and Signatures in Sedimentary Successions Lynne E. Frostick,2009-04-13 Stratigraphers and sedimentologists who are presently describing and interpreting the infill of sedimentary basins are generally agreed that it is difficult to disentangle the signatures of tectonic processes from those of climate and eustatic sea level change in the resultant rock succession. Until better criteria are developed to distinguish between the roles played by the major variables, it is still most useful to document and interpret basin-fill architectures where we know, from independent evidence, that one of the main controls is likely to have been a major contributor. This book contains a collection of papers describing situations where the tectonic setting is fairly well established, and it can be assumed that at least the tectonic factor has contributed to the resultant signatures.

Spectral Spaces Max Dickmann,Niels Schwartz,Marcus Tressl,2019-03-21 Offers a comprehensive presentation of spectral spaces focussing on their topology and close connections with algebra, ordered structures, and logic.

Agriculture Handbook Lulu B. Thorne,1949 Set includes revised editions of some issues.

Integral Domains Inside Noetherian Power Series Rings: Constructions and Examples William Heinzer,Christel Rotthaus,Sylvia Wiegand,2021-10-08 Power series provide a technique for constructing examples of commutative rings. In this book, the authors describe this technique and use it to analyse properties of commutative rings and their spectra. This book presents results obtained using this approach. The authors put these results in perspective; often the proofs of properties of classical examples are simplified. The book will serve as a helpful resource for researchers working in commutative algebra.
