Bomb, Book and Compass Simon Winchester,2008-09-25 Before fate intervened, Joseph Needham was a distinguished biochemist at Cambridge University, married to a fellow scientist. In 1937 he was asked to supervise a young Chinese student named Lu Gwei-Djen, and in that moment began the two greatest love affairs of his life - Miss Lu, and China. Miss Lu inspired Needham to travel to China where he initially spent three dangerous years as a wartime diplomat. He established himself as the pre-eminent China scholar of all time, firm in his belief that China would one day achieve world prominence. By the end of his life, Needham had become a truly global figure, travelling endlessly and honoured by all - though banned from America because of his politics. And in 1989, after a fifty-two year affair, he finally married the woman who had first inspired his passion. The Magnificent Barbarian is Simon Winchester at his best - at once a magnificent portrait of one man's remarkable life and a riveting exploration of the country that so engaged him.

United States Military Forces and Installations in Europe Simon Duke,1989 For many people who live in Europe, the presence of substantial US military forces is a matter of concern and debate, which has tended so far to centre around a few highly-visible bases, such as the cruise missile locations. Apart from these few bases, relatively little is known about the size and extent of the US military presence in Europe. This book aims to fill that gap by providing the raw data on what is where. The study also highlights the historical details behind the acquisition of bases in individual countries, and summarizes and analyses all of the basing agreements between the US and its host nations which are available to the public. The book a timely contribution to the debate: as discussions begin for possible post-INF cuts in superpower force levels in Europe, there is an urgent need for accurate and unbiased information on US forces in Western Europe and on the massive infrastructure that supports those forces.

Airpower Advantage Diane Therese Putney,2004 American air power is a dominant force in today's world. Its ascendancy, evolving in the half century since the end of World War II, became evident during the first Gulf War. Although a great deal has been written about military operations in Desert Shield and Desert Storm, this deeply researched volume by Dr. Diane Putney probes the little-known story of how the Gulf War air campaign plan came to fruition. Based on archival documentation and interviews with USAF planners, this work takes the reader into the planning cells where the difficult work of building an air campaign plan was accomplished on an around-the-clock basis. The tension among air planners is palpable as Dr. Putney traces the incremental progress and friction along the way. The author places the complexities of the planning process within the context of coalition objectives. All the major players are here: President George H. W. Bush, General H. Norman Schwarzkopf, General Colin Powell, General Chuck Horner, and Secretary of Defense Richard Cheney. The air planning process generated much debate and friction, but resulted in great success-a 43-day conflict with minimum casualties. Dr. Putney's rendering of this behind-the-scenes evolution of the planning process, in its complexity and even suspense, provides a fascinating window into how wars are planned and fought today and what might be the implications for the future. Mobile Robotics Ulrich Nehmzow,2012-12-06 Mobile Robotics: A Practical Introduction (2nd edition) is an excellent introduction to the foundations and methods used for designing completely autonomous mobile robots. A fascinating, cutting-edge, research topic, autonomous mobile robotics is now taught in more and more universities. In this book you are introduced to the fundamental concepts of this complex field via twelve detailed case studies that show how to build and program real working robots. Topics covered in clued learning, autonomous navigation in unmodified, noisy and unpredictable environments, and high fidelity robot simulation. This new edition has been updated to include a new chapter on novelty detection, and provides a very practical introduction to mobile robotics for a general scientific audience. It is essential reading for 2nd and 3rd year undergraduate students and postgraduate students studying robotics, artificial intelligence, cognitive science and robot engineering. The update and overview of core concepts in mobile robotics will assist and encourage practitioners of the field and set challenges to explore new avenues of research in this exiting field. The author is Senior Lecturer at the Department of Computer Science at the University of Essex. A very fine overview over the relevant problems to be solved in the attempt to bring intelligence to a moving vehicle. Professor Dr. Ewald von Puttkamer, University of Kaiserslautern Case studies show ways of achieving an impressive repertoire of kinds of learned behaviour, navigation and map-building. The book is an admirable introduction to this modern approach to mobile robotics and certainly gives a great deal of food for thought. This is an important and though-provoking book. Alex M.
