Whe Are We Really 102 Crystal Clark,2010-12 When Tomorrow Comes begins a brand new chapter of the WHO ARE WE REALLY series through a fictional account of competing realities and timelines, the hearts and minds of those who created them, and the interconnectedness of all things. As we journey through the love and loss of two different realities, we may find ourselves wondering: Are they us, and are we them? Perhaps when one timeline breathes in, the other one exhales...

SOC Functions and Their Applications Jein-Shan Chen,2019-02-11 This book covers all of the concepts required to tackle second-order cone programs (SOCPs), in order to provide the reader a complete picture of SOC functions and their applications. SOCPs have attracted considerable attention, due to their wide range of applications in engineering, data science, and finance. To deal with this special group of optimization problems involving second-order cones (SOCs), we most often need to employ the following crucial concepts: (i) spectral decomposition associated with SOCs, (ii) analysis of SOC functions, and (iii) SOC-convexity and -monotonicity. Moreover, we can roughly classify the related algorithms into two categories. One category includes traditional algorithms that do not use complementarity functions. Here, SOC-convexity and SOC-monotonicity play a key role. In contrast, complementarity functions are employed for the other category. In this context, complementarity functions are closely related to SOC functions; consequently, the analysis of SOC functions can help with these algorithms.

Lower Ed Tressie McMillan Cottom,2017-02-28 More than two million students are enrolled in for-profit colleges, from the small family-run operations to the behemoths brandished on billboards, subway ads, and late-night commercials. These schools have been around just as long as their bucolic not-for-profit counterparts, yet shockingly little is known about why they have expanded so rapidly in recent years—during the so-called Wall Street era of for-profit colleges. In *Lower Ed* Tressie McMillan Cottom—a bold and rising public scholar, herself once a recruiter at two for-profit colleges—expertly parses the fraught dynamics of this big-money industry to show precisely how it is part and parcel of the growing inequality plaguing the country today. McMillan Cottom discloses the shrewd recruitment and marketing strategies that these schools deploy and explains how, despite the well-documented predatory practices of some and the campus closings of others, ending for-profit colleges won't end the vulnerabilities that made them the fastest growing sector of higher education at the turn of the twenty-first century. And she doesn't stop there. With sharp insight and deliberate acumen, McMillan Cottom delivers a comprehensive view of postsecondary for-profit education by illuminating the experiences of the everyday people behind the shareholder earnings, congressional battles, and student debt disasters. The relatable human stories in *Lower Ed*—from mothers struggling to pay for beauty school to working class guys seeking “good jobs” to accomplished professionals pursuing doctoral degrees—illustrate that the growth of for-profit colleges is inextricably linked to larger questions of race, gender, work, and the promise of opportunity in America. Drawing on more than one hundred interviews with students, employees, executives, and activists, *Lower Ed* tells the story of the benefits, pitfalls, and real costs of a for-profit education. It is a story about broken social contracts; about education transforming from a public interest to a private gain; and about all Americans and the challenges we face in our divided, unequal society.

Introduction to Chemical Kinetics Gordon Skinner,2012-12-02 Introduction to Chemical Kinetics is a compilation of lecture notes of the author about principles, concepts, and theories in chemical kinetics. The book tackles the nature of chemical kinetics, reaction rates and order, and thermodynamic consistency of rate laws. The effects of temperature on kinetics, prediction of reaction rates, gas-phase reactions, and controlled reactions are also discussed. The text also explains the reactions catalyzed by enzymes; reactions in solids and heterogenous systems; oxidation of metals; catalysis of reactions by solids; and methods for different reaction rates. The monograph is recommended as a textbook for undergraduate students in chemistry who are currently taking up kinetics, as it is an easily understood and concise book that can also be used as reference.

Ain't Gonna Be the Same Fool Twice April Sinclair,2015-08-18 Stevie Stevenson graduates from college and embraces the liberating California lifestyle in award-winning author April Sinclair's follow-up to her “vivid and brilliant” (San Francisco Review of Books) debut novel *Coffee Will Make You Black* Growing up black in 1960s Chicago, Jean “Stevie” Stevenson came of age amid the tumult of the civil rights movement, learning to value not just her race and gender but her sexuality as well. Now, nearly a decade later, Stevie is a college graduate enjoying a week of vacation in San Francisco. After getting a taste of the bohemian life, she can't bring herself to return home to her family and journalism career in Chicago. Instead, she's determined to spread her wings and discover her true self, experimenting with free love, gay pride, and vegetarianism; forging a friendship with a gay disco queen; and taking a job at the feminist Personal Change Counseling Center. As she falls in and out of love, Stevie takes time to observe both the absurd and the liberating qualities of the West Coast hippie lifestyle—and is constantly reminded that the journey to self-discovery likely has no end point. Written with the same bright wit and endless charm that made *Coffee Will Make You Black* such a beloved book, *Ain't Gonna Be the Same Fool Twice* is a delightful continuation of Stevie's story that was hailed by Salon as “ripely funny, unpretentious, and sincere.”
