Multi-Agent Oriented Programming Olivier Boissier,Rafael H. Bordini,Jomi Hubner,Alessandro Ricci,2020-09-15 The main concepts and techniques of multi-agent oriented programming, which supports the multi-agent systems paradigm at the programming level. A multi-agent system is an organized ensemble of autonomous, intelligent, goal-oriented entities called agents, communicating with each other and interacting within an environment. This book introduces the main concepts and techniques of multi-agent oriented programming, (MAOP) which supports the multi-agent systems paradigm at the programming level. MAOP provides a structured approach based on three integrated dimensions, which the book examines in detail: the agent dimension, used to design the individual (interacting) entities; the environment dimension, which allows the development of shared resources and connections to the real world; and the organization dimension, which structures the interactions among the autonomous agents and the shared environment.

Introduction to MPEG-7 B. S. Manjunath,Philippe Salembier,Thomas Sikora,2002-06-14 Introduction to MPEG-7: Ein unentbehrliches Nachschlagewerk für Elektronik- und Kommunikationsingenieure, die MPEG-7-kompatible Systeme entwerfen und implementieren wollen sowie für Forscher und Studenten, die sich mit Multimedia-Datenbanktechnologie beschäftigen! Prinzipien und Konzepte der Indizierung von audiovisuellem Material, Metadatenbeschreibung, Informationsabfrage und Browsing sind einige der angesprochenen Themen. Detailliert wird auf die wichtigsten Tools zur Indizierung und zum Abruf von Bildern und Videosequenzen eingegangen. Die mitgelieferte Demo-Software führt schrittweise in die Multimedia-Systemkomponenten ein.

Feature Engineering and Selection Max Kuhn,Kjell Johnson,2019-07-25 The process of developing predictive models includes many stages. Most resources focus on the modeling algorithms but neglect other critical aspects of the modeling process. This book describes techniques for finding the best representations of predictors for modeling and for finding the best subset of predictors for improving model performance. A variety of example data sets are used to illustrate the techniques along with R programs for reproducing the results.

Environments for Multi-Agent Systems Danny Weyns,H. Van Dyke Parunak,Fabien Michel,2005-02-10 This modern field of multi-agent systems has developed from two main lines of earlier research: its practitioners generally regard it as a form of distributed artificial intelligence, whereas some researchers have persistently advocated ideas from the field of artificial life. AI agents (and their designers) usually take the environment for agent interaction as granted. From the ALife perspective and for ALife agents, the environment for interaction is an active participant in agent dynamics, a first class member of the overall systems. This book originates from the First International Workshop on Environments for Multi-Agent Systems, E4MAS 2004, held in New York, NY, USA in July 2004 as a satellite workshop of AAMAS 2004. The 13 carefully selected reviewed and revised papers presented together with an introductory survey article of close to 50 pages are organized in topical sections on conceptual models, language for design and specification, simulation and environments, mediated coordination, and applications.
