Mr. Deeds Goes to Yankee Stadium Wes D. Gehring, 2010-07-27 Celebrated film director Frank Capra was a central architect of the feel good movie genre now known as populism, which celebrates people, families, second chances, and other traditional American icons such as small town or pastoral life and baseball. Capra developed his own brand of populism by interweaving traditional values of the genre with a younger, more vulnerable hero starting with *Mr. Deeds Goes to Town* in 1936. The result, Capraesque populism, has had a significant influence on American pop culture in general and forms a small but important subgenre of baseball movie. This book examines eight of these Capraesque baseball films, starting with the all-important *Pride of the Yankees* (1942), which one admiring critic has called *Mr. Deeds Goes to Yankee Stadium*. An introduction provides an overview of baseball and populism. Individual chapters are devoted to the populist legacy from Will Rogers (Capra's mentor) to Capra, *The Pride of the Yankees*, *The Stratton Story*, *Angels in the Outfield*, *The Natural*, *Bull Durham*, *Field of Dreams*, *Frequency* and *The Rookie*.

The New Digital Natives Alexei Dingli, Dylan Seychell, 2015-03-17 The first generation of Digital Natives (DNs) is now growing up. However, these digital natives were rather late starters since; their exposure to computers started when they could master the mouse and the penetration of computers in educational institutions was still very low. Today, a new breed of digital natives is emerging. This new breed includes those individuals who are being introduced from their first instances to the world of wireless devices. One year olds manage to master the intuitive touch interfaces of their tablets whilst sitting comfortably in their baby bouncers. The controller-less interfaces allow these children to interact with a machine in a way which was unconceivable below. Thus, our research investigated the paradigm shift between the different generations of digital natives. We analysed the way in which these two generations differ from each other and we explored how the world needs to change in order to harness the potential of these new digital natives.

Sensor Technology for Smart Homes Juan Ye,Michael O’Grady,Oresti Banos,2021-04-21 This Special Issue presents the recent advances in sensor technologies for smart homes, including fiber Bragg grating (FBG) sensors for detecting the presence and number of occupants, the Internet of things for monitoring CO₂ concentration, and designing a novel eye-tracking system for monitoring and controlling a smart home, and infrared thermal sensors for fall detection. Such new explorations are pushing the boundary of sensing technologies and, thus, will have more profound implications for the future smart home. Advanced machine learning and data mining algorithms have been proposed to address sensor failure, appliance identification, and human activity recognition in a home environment. These results will enable a promising, sustainable deployment of sensing technologies. A novel multi-agent gamification system is proposed for managing tasks between household members and between families, which demonstrate another dimension of future smart home application. This Special Issue concludes with a review on sensors for human activity recognition. This work paves the roadmap for deploying smart home systems in different socioeconomic contexts. The whole Special Issue has significantly helped to shape our understanding of the strength, implications, and barriers of deploying long-term, sustainable, sensor technologies for smart homes.
