Sweet Spot One-Third Roulette Strategy (OTRS) Stephen TABONE,2019-09-07 Sweet Spot One-Third Roulette Strategy (OTRS) An extensive exploration into Roulette Column or Dozen Betting Very Stable Win/Loss Ratio: Pro Roulette Players Are Using This Mega Powerful StrategyThe average Roulette gambler plays in one of two main ways. The first way involves betting on a random selection of 18 numbers (just under half the wheel if playing on a single Zero wheel, and one off an even split if playing on a Double Zero wheel since there are x38 numbered pockets). Most bettors who take this approach tend to change some of their numbers on subsequent games. Sometimes players will bet less or more than 18 numbers generally more when they are not hitting numbers and less when they are hitting numbers. This means their risk of losing more chips increases when they are not doing too well versus winning more when they are hitting numbers and losing less by covering fewer numbers. The second way Roulette gamblers approach the game is to choose x12 numbers (just under One-Third of the wheel), and they tend to stick to the same numbers. When you really understand how Roulette operates and apply a strategy that gels well with the concept of winning, a big psychological burden is removed from the decision-making process that being the what numbers factor. Thus, what remains is the when to bet factor. The focus of the strategy found in this book concentrates on knowing when to bet and by how much to bet. This book explores these two important elements without which a strategy falls short. In this book, the Author shows you how you can apply order to Roulette games using the second way i.e. betting on x12 numbers, and explains how his strategy works so you can stand a very good chance yielding a profit during a session of playing Roulette games.List of books titles by this Author can be found here: <https://www.amazon.com/Stephen-R-Tabone/e/B01COOOED8> Contents: Introduction. Roulette Cracker John Hare, Roulette is a fixed odds game. Unlike card games, bingo and some other casino games where there are so many variables, the odds (the probability) of winning on a roulette table are fixed for every bet. If you know how the game works and understand something about the statistical probabilities of the bets, you can reduce the risk of losing and play with the odds in your favour. Surprisingly, even though you may win more often, you will almost certainly put

your winnings back and lose in the long run if you just continue what you are doing. This is a statistical fact and is because the European table has an advantage of 2.7%. Despite this however, there are still ways to help counteract the problem particularly if you change the way you bet and introduce a betting ratio into your play. If you get it right, you could at least extend your time on the table, reduce your losses or maybe even return to profit. This book started out as the instruction manual for the Roulette Cracker software; a sophisticated algorithm. It still is the instruction manual but sections have been re written and now contain information which can be very useful to a roulette player with or even without the software - whether they are playing for fun or for real, in a casino or on line. The software is accessed by logging onto our web site and enrolling for one of the 3, 6, or 12 month membership options, but the book can be purchased separately. In addition to gaining some useful information about roulette without membership, buying the book allows you to learn exactly how the software works and what additional benefits you might get, this will help you make the most of your membership of Roulette Cracker. www.Roulette-Cracker.co.uk

Roulette Brett Morton,2004-02-01 Roulette is a percentage game, and winning occasionally is simple. The aim is to win consistently. After watching, listening, and playing all over the world, Brett Morton distilled a wealth of information—and began to understand why he had been losing so often. Each spin of the wheel is a new and usually random event. Every spin is a fight against the casino's advantages. It was a challenge to debunk the theorists, especially those who had never played. His research and hard work proved he was right—winning consistently is possible. Morton explains the methods to use, rates many of the well-known systems, but above all brings a clear and refreshing vision to this exciting game.

Winning at Roulette online and offline begins with putting a workable method into action. The Roulette Supernova System (RSS15) Stephen Tabone, 2020-01-22 The Roulette Supernova System (RSS15) / Flat Betting 15 Numbers into Profit - For use on European or American Roulette Wheels / The automatized skill of The Roulette Supernova System RSS15 is capable of outperforming the cleverest of computer programmes and the seasoned professional roulette bettor. It is the ultimate roulette predicting system. For use on European or American Roulette Wheels. / I am very excited to write about my new Roulette System. If you are looking for a roulette system that actually works, i.e. one that is able to make a profit during a Roulette session (certain amount of games/spins) most of the time, then look no further. This is it! The Roulette Supernova System (RSS15) works on single, double and triple zero 'live' wheels. When I write live, I mean human dealer-initiated games that are truly random and where games are conducted in regulated casinos, not online, non-random algorithms or manipulated air wheels. After developing and testing RSS15, I discovered an anomaly. Now, when I observe live roulette wheels in casinos, I began to see roulette as all very easy and predictable. In using RSS15, I now consider a wheel as being small and the games in motion not so complex in terms of being able to generate profits. For more than 20 years I have studied bet selection options on the table layout in relation to previous outcomes. I have observed sequences of outcomes and considered the probabilities of one and more numbers appearing in any one session of play pertaining to a limited number of games. I have analysed many hundreds of thousands of live and random computer-generated outcomes. I have played and watched countless players bet in various casinos, considering why we chose the number/s we do and on what basis we believe those number/s have a chance of occurring moreover in most instances before the dealer has even spun the ball. No doubt you would have realized too that Roulette is a hard game to beat. I thought so too until I started to look at what drives the game. And by this, I mean the dealer, ball, wheel relationship. You see most people who play Roulette focus on their numbers, their lucky numbers, or where the dolly marker is placed on the table betting layout from spin to spin or go against or going with streaks of even chances or any of the 2-to-1 pay-out betting option odds. On

the whole players are struggling to maintain not only a profitable advantage but are fighting to keep their bankrolls alive. It is like trying to keep a patient alive on life support while the vampire dealers, the casino bosses and demon house edge conspire to suck the blood from the poor souls. There are two main elements to winning when playing Roulette. The first is knowing when to stop and the second is knowing how to get to the profitable side of stopping. To know how to achieve both in order to win as an Advantage Player and Pro Roulette player, you need a proven Roulette System that will deliver. One that is able to hold its own on 'any live Roulette wheel' and you will need to learn when you should take profits and end a session and why this is important. I cover all these aspects in this book as I explain what my roulette system is, how and why it works and how to apply it in practice.
