States, Civilisations and the Reset of World Order Richard Higgott, 2021-09-16

This book evaluates the current state of world (dis)order at a time of growing populism, nationalism and pandemic panic. It distils the implications of the 'civilisational state' for world order. The retreat of US leadership is mirrored by the decline of both the material and normative liberal multilateral infrastructure it supported. Meanwhile, the rise of China as a challenger is accompanied in political, economic and cultural terms by other emerging powers no longer bound to the norms of 20th century world affairs, notably Turkey, India, China and Russia. By emphasising a cultural lens of analysis alongside robust political and economic analysis, the author offers a prescriptive agenda for the coming post-pandemic age that recognises the changing powers of civilisational, state and hybrid non-state actors. Without overestimating their probabilities, he outlines prospects and preconditions for effective inter-civilisational dialogue and proposes a series of minimal conditions for a multilateral 'reset'. This book will appeal to public and private decision-makers, the media,

the educated lay public and civil society actors interested in the rise of civilisational politics and its possible consequences for world affairs. It will be of particular interest to students and researchers in the fields of politics, international relations, international political economy, geopolitics, strategic studies, foreign policy and social psychology.

Digitalisation for Sustainable Infrastructure: The Road Ahead Carlo Secchi, Alessandro Gili, 2022-11-24 In today's tumultuous and fast-changing times, digitalisation and technology are game changers in a wide range of sectors and have a tremendous impact on infrastructure. Roads, railways, electricity grids, aviation, and maritime transport are deeply affected by the digital and technological transition, with gains in terms of competitiveness, cost-reduction, and safety. Digitalisation is also a key tool for fostering global commitment towards sustainability, but the race for digital infrastructure is also a geopolitical one. As the world's largest economies are starting to adopt competitive strategies, a level playing field appears far from being agreed upon. Why are digitalisation and technology the core domains of global geopolitical competition? How are they changing the way infrastructure is built, operated, and maintained? To what extent will road, rail, air, and maritime transport change by virtue of digitalisation, artificial intelligence, and the Internet of Things? How to enhance cyber protection for critical infrastructure? What are the EU's, US' and China's digital strategies?

Select Your Electric Car Dale Stubbart, An Electric Car is often referred to as an electric vehicle or EV. In *Select Your Electric Car*, I explore the various options of EVs available in the United States. If you live in California or in one of the other states which have similar zero emission vehicle standards, you will have more choices. These states have laws that

car companies selling cars in their state must provide a certain percentage of EVs. I am going to focus on the EVs which are widely available in the US now (2018). I'll compare them, so that hopefully you will be able to purchase the EV which fits your lifestyle - or the lifestyle which you plan to adopt once you own an EV. I'll also look at a few other EVs which are not as widely available. In 2019, car dealers will be offering more models of EVs nationally, at least that's the plan. I'm thinking that you might want a car with more of a track record. So I won't be saying as much about those models, though I will mention them. The US ranks seventh in number of EVs sold, following China, United Kingdom, France, Sweden, Netherlands, and Norway who is at #1. If you wanted to wait until 2019 to drive your EV, and you had \$200,000 (\$200K) to spare, and you had a Commercial Driver's License (CDL) or could hire a driver who did; why not just purchase a Tesla Electric Semi. After all, Elon Musk is now saying it will have a 600-mile range. Even if he's only 75% correct, that's still a 450-mile range. I could drive into town (Olympia) every day of the week and up to the big city (Seattle) on the weekend. And I still wouldn't have to charge my rig. And in Aug 2018, a Tesla Semi made it from Coast to Coast across the US. It did have to be recharged. But the driver was able to find charging stations which were powerful enough to charge it. But where would I park the thing? Besides I don't have a CDL. And the few people I know who do aren't interested in being my personal chauffeur. I also definitely don't have \$200K that I can afford to spend on my next vehicle. I won't talk about the Tesla Semi in this book. You can read about that vehicle in my book - The Xybrid Vehicle. I'll also mention techniques for driving an EV which will expand their range. At least these techniques work when driving my 2015 Electric Nissan Leaf. Rating G; Reading Level Easy

Logistics Management in the 21st Century and Beyond Moses Onilede, In this ever-evolving world, the essence of logistics management continues to transform, driven by a myriad of factors such as technological advancements, globalization, and changing consumer demands. As we traverse the 21st century and beyond, the logistics landscape is rapidly morphing into a complex network of interconnected systems that require astute management for optimal efficiency and effectiveness. This book, *Logistics Management in the 21st Century and Beyond*, aims to provide a comprehensive exploration of the current trends, challenges, and future potentials of logistics management. In the 21st century, logistics management has stepped out of the shadow of being merely a support function. Today, it is recognized as a strategic business function that directly impacts a company's bottom line and its competitive positioning. The era marked by the rise of e-commerce giants, real-time tracking, and just-in-time delivery systems has set new parameters for logistics management, pushing its boundaries beyond traditional norms. However, the advent of these developments also ushers in various challenges. Environmental concerns, demand for same-day or even same-hour delivery, a shifting supply chain due to global politics, and the need for data-driven decision-making are just a few of the hurdles that logistics managers face in the current century. This book delves into these issues, offering insights into managing logistics in this complex era and strategies to navigate these challenges effectively. Moreover, this book also paves the way to the future, exploring the potential impacts of emerging technologies such as blockchain, artificial intelligence, and autonomous vehicles on logistics management. It also discusses the importance of

sustainability and resilience in logistics, as climate change and global crises like the COVID-19 pandemic have demonstrated the need for logistics systems that can withstand shocks and adapt to new circumstances. Logistics Management in the 21st Century and Beyond is a guide to the current state of logistics management and a roadmap to its future. It is intended for logistics professionals, business managers, students, and anyone interested in understanding the dynamic field of logistics management. It provides a wealth of knowledge and practical insights, highlighting the importance of logistics in our interconnected, fast-paced, and ever-changing world. Embark on this journey to unravel the complexities of logistics management in the 21st century and look beyond to foresee its future. Our exploration will lead you to the understanding that logistics, in essence, is the lifeline of the modern global economy, and its efficient and effective management is the key to thriving in this competitive era.

Energy Issues and Transition to a Low Carbon Economy Francisco J.

Lozano, Alberto Mendoza, Arturo Molina, 2021-08-10 Without energy, there is no well-functioning economy, besides facing social risks. This book provides a systemic approach to energy in Mexico and its relations to the USA arising from the energy reform of the former. It covers the transition from fossil fuels to a low-carbon economy, relying heavily on renewable sources and mitigating climate change risks. Several human knowledge disciplines and topics are covered in the book, including public policy, economics, transboundary issues, electricity and thermal energy, residual biomass use, distributed energy systems and its management, and decision-making tools. An analysis is considered regarding energy issues interaction in the Mexican-USA border, which differ in both

countries from pricing and policy, and the work and research that has been developed for transboundary energy trade.
