Russian Mathematics Education Alexander P. Karp, Bruce Ramon Vogeli, 2010

This anthology, consisting of two volumes, is intended to equip background researchers, practitioners and students of international mathematics education with intimate knowledge of mathematics education in Russia. Volume I, entitled *The History and Relevance of Russian Mathematics Education*, consists of several chapters written by distinguished authorities like Jeremy Kilpatrick and Bruce Vogeli. It examines the history of mathematics education in Russia and its relevance to mathematics education throughout the world. The second volume, entitled *Programs and Practices* will examine specific Russian programs in mathematics, their impact and methodological innovations. Although Russian mathematics education is highly respected for its achievements and was once very influential internationally, it has never been explored in depth. This publication does just that.

Mathematical Circles Dmitry Fomin, Sergei Aleksandrovich Genkin, Dmitrii

Vladimirovich Fomin, Ilia Itenberg, 1996 What kind of book is this? It is a book produced by a remarkable cultural circumstance in the former Soviet Union which fostered the creation of groups of students, teachers, and mathematicians called mathematical circles. The work is predicated on the idea that studying mathematics can generate the same enthusiasm as playing a team sport - without necessarily being competitive. This book is intended for both students and teachers who love mathematics and want to study its various

branches beyond the limits of school curriculum.

Russian Mathematicians in the 20th Century Yakov Sinai, 2003-10-08 In the 20th century, many mathematicians in Russia made great contributions to the field of mathematics. This invaluable book, which presents the main achievements of Russian mathematicians in that century, is the first most comprehensive book on Russian mathematicians. It has been produced as a gesture of respect and appreciation for those mathematicians and it will serve as a good reference and an inspiration for future mathematicians. It presents differences in mathematical styles and focuses on Soviet mathematicians who often discussed "what to do" rather than "how to do it". Thus, the book will be valued beyond historical documentation. The editor, Professor Yakov Sinai, a distinguished Russian mathematician, has taken pains to select leading Russian mathematicians – such as Lyapunov, Luzin, Egorov, Kolmogorov, Pontryagin, Vinogradov, Sobolev, Petrovski and Krein – and their most important works. One can, for example, find works of Lyapunov, which parallel those of Poincaré; and works of Luzin, whose analysis plays a very important role in the history of Russian mathematics; Kolmogorov has established the foundations of probability based on analysis. The editor has tried to provide some parity and, at the same time, included papers that are of interest even today. The original works of the great mathematicians will prove to be enjoyable to readers and useful to the many researchers who are preserving the interest in how mathematics was done in the former Soviet Union. Contents: Lyapunov (A New Case of Integrability of Differential Equations of Motion of a Solid Body in Liquid) Luzin (Sur l'absolue convergence des series trigonometriques) Steklov Egorov (Mathematics and Religion in Moscow, by C E Ford) Smirnov (Sur les polynomes orthogonaux a une variable complexe) Bernstein (Sur la meilleure approximation sur tout l'axe reel des fonctions continues par des fonctions entieres de degre fini) Urysohn Chebotaryov Vinogradov (Representation of an Odd Number as the Sum of Three Primes) Aleksandrov (Sur la notion de dimension des ensembles fermes) Menshov Gelfond (Sur le septieme probleme de Hilbert) Khinchin (Three Pearls of Number Theory) Kolmogorov (Local Structure of Turbulence in an Incompressible Viscous Fluid at Very Large Reynolds Numbers) Pontryagin (Homotopic Classification of an $(n+2)$ -Dimensional Spheres into an n -Dimensional Spheres) Gelfand (On Identities for Eigenvalues of a Second Order Differential Operators) Sobolev (On a Theorem of Functional Analysis) Petrovsky (On Problem of some PDE's) Krein (On Extreme Points of Regularly Convex Sets) Liusternik (Topology and Variational Problem) Rokhlin (Proof of Gudkov's Hypothesis) Novikov (Periodic Groups) Bogoliubov (Mathematical Problems of Quantum Field Theory) Aleksandrov (Neue ungleichungen fur die mischvolumen konvexer korper) Kantorovich (A New Method of Solving of Some Classes of Extremal Problems) Malcev (Free Topological Algebras) Linnik (An Application of the Theory of Matrices and of Lobatschevskian Geometry to the Theory of Dirichlet's Real Characters) Markov (The Theory of Algorithms) Lavrentev (On the Theory of Quasi-Conformal Mapping of Three-Dimensional Domains) Tikhonov (Ueber die Erweiterung von Raumen) Delone (Sur le nombre de representations d'un nombre par une forme eubique a discriminant negatif) Keldysh (On the Completeness of the Eigenfunctions of Some Classes of Non-Self Adjoint Linear Operators) Faddeev and other articles Readership: General mathematicians. Keywords: Geometry & Topology; Analysis & Differential Equations; Algebra & Number Theory Reviews: "For anyone who wants an overview of mathematics in

Russia during the 20th century there is now the volume Russian Mathematicians in the 20th century ... It shall remain on my book shelf as a monument over a heroic generation."Professor Lennart Carleson Institute of Mathematics, The Royal Institute of Technology, Stockholm, Sweden "The list selected is very representative both topically and geographically. It covers research in all areas of mathematics ... The 33 persons in the list worked not only in Moscow and Leningrad (now Saint Petersburg), but also in Kiev, Odessa, Kazan, and Novosibirsk. Most of the work presented in this volume was done during the Soviet era when the Russian mathematical community was artificially isolated from the international one for political reasons. Thus to develop their subjects, Soviet mathematicians needed to be self-sufficient. And this volume shows that they indeed succeeded in it. The originality of the Russian mathematical school is clearly seen when one reads the papers included in the book. Altogether this volume gives a very strong impression of the versatility, originality and strength of the Russian mathematical school."L D Faddeev Petersburg Department of the Steklov Institute of Mathematics , Russian Academy of Sciences "This book is fascinating ... It shows the greatness of Russian or Soviet mathematicians and the foundations on which younger mathematicians could build up, leading to world leadership until the end of the Soviet Union when the exodus started."F Hirzebruch Emeritus Professor of Mathematics University of Bonn

Russian for the Mathematician Sydney Henry Gould,2012-12-06 The Board of Trustees of the American Mathematical Society, expressing its belief that a great deal of time would be saved for mathematicians if they could study a textbook of Russian precisely adapted to their needs, granted to the present author nine months leave of absence from his duties as Editor of Translations. To the Board, and to Gordon L. Walker, the Executive Director of the Society, who took the initiative in this matter with his customary energy and good will, the author is deeply grateful for the opportunity to write such a book. For indispensable help and advice in the preparation of the book, which was written chiefly in Gottingen, Moscow and Belgrade, gratitude is due to many people, especially to Martin Kneser of the Mathematics Institute in Gottingen, S. M. Nikol'skii and L. D. Kudrjavcev of the Steklov Institute in Moscow, T. P. Andjelic of the Mathematics Institute in the Yugoslav Academy of Arts and Sciences, G. Kurepa and B. Terzic of the Mathematics and Slav istics Departments in the University of Belgrade, and Alexander Schenker of the Department of Slavic Languages and Literatures in Yale University. For expert assistance, both secretarial and linguistic, the author is indebted to his wife Katherine and his son William, for proficient typing of the Reading Selections to Tamara Burmeister, Secretary of the Slavistics Department in Belgrade, and Christine Lefian, editorial assistant in the American Mathematical Society. A Manual for Translators of Mathematical Russian Sydney Henry Gould, 1991

This manual is intended for mathematicians who are fairly well acquainted with Russian and have a need to translate mathematical materials into English. Both of the editors worked extensively with such translations and, in the process of their work, kept records of problems, both grammatical and stylistic, that commonly turned up. The main part of the booklet presents typical examples: first the Russian text is given, then the faulty translation, an acceptable translation, and usually some comments. Although such a manual cannot be exhaustive, it does deal with many common mistakes and misconceptions. The examples are taken from the mathematical literature, making the manual of particular interest to mathematicians; however, it should also be useful to physicists, chemists, engineers, and anyone else concerned with the translation of scientific Russian into English.

A.J. Lohwater's Russian-English Dictionary of the Mathematical Sciences A. J. Lohwater, 1990

Algebra I Alexey L. Gorodentsev, 2016-11-24 This book is the first volume of an intensive "Russian-style" two-year graduate course in abstract algebra, and introduces readers to the basic algebraic structures – fields, rings, modules, algebras, groups, and categories – and explains the main principles of and methods for working with them. The course covers substantial areas of advanced combinatorics, geometry, linear and multilinear algebra, representation theory, category theory, commutative algebra, Galois theory, and algebraic geometry – topics that are often overlooked in standard undergraduate courses. This textbook is based on courses the author has conducted at the Independent University of Moscow and at the Faculty of Mathematics in the Higher School of Economics. The main content is complemented by a wealth of exercises for class discussion, some of which include comments and hints, as well as problems for independent study.

Math from Three to Seven Aleksandr K. Zvonkin, 2011 This book is a captivating account of a professional mathematician's experiences conducting a math circle for preschoolers in his apartment in Moscow in the 1980s. As anyone who has taught or raised young children knows, mathematical education for little kids is a real mystery. What are they capable of? What should they learn first? How hard should they work? Should they even work at all? Should we push them, or just let them be? There are no correct answers to these questions, and the author deals with them in classic math-circle style: he doesn't ask and then answer a question, but shows us a problem--be it mathematical or pedagogical--and describes to us what happened. His book is a narrative about what he did, what he tried, what worked, what failed, but most important, what the kids experienced. This book does not purport to show you how to create precocious high achievers. It is just one person's story about things he tried with a half-dozen young children. Mathematicians, psychologists, educators, parents, and everybody interested in the intellectual development in young children will find this book to be an invaluable, inspiring resource. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their

parents and teachers, and the mathematics profession. Titles in this series are co-published with the Mathematical Sciences Research Institute (MSRI).

Kvant Selecta: Algebra and Analysis, I Serge Tabachnikov, 1999-08-03 This volume contains translated articles originally published from 1970 to 1990 in the Russian journal Kvant. The influence of this magazine on mathematics and physics education in Russia is unmatched. This volume initiates a collection that represents the Russian tradition of expository mathematical writing at its best. Written by leading Russian mathematicians and expositors, these articles present mathematics in a conceptual, entertaining, and accessible way. This volume is designed for students and teachers who love mathematics, and can expand on local school curriculum subjects. This first volume addresses various topics in number theory.

A Course of Modern Analysis E. T. Whittaker, George Neville Watson, G. N. Watson, 1927 This classic text is known to and used by thousands of mathematicians and students of mathematics throughout the world. It gives an introduction to the general theory of infinite processes and of analytic functions together with an account of the principle transcendental functions.

Surveys in Geometry and Number Theory Nicholas Young, 2007-01-18 A collection of survey articles by leading young researchers, showcasing the vitality of Russian mathematics.

Eastern European Mathematics Education in the Decades of Change Alexander Karp, 2020-05-04 This contributed volume is devoted to the recent history and evolution of mathematics education in Eastern Europe, exploring how it was influenced by social and political changes in this part of the world. Despite the broad recognition of the importance of these changes, little scholarship exists that examines the ways in which they were followed by changes in the teaching of mathematics in the post-socialist countries. Indeed, the analyzed processes are complex and vary across the states. Accordingly, this book touches on many factors--including differences in cultures and traditions -- that find expression in the teaching of mathematics. Specifically, this volume seeks to explore what changes there were in education in general and in the position of mathematics in school education in these years, and how these changes may be explained and documented; what changes there were in the content of mathematics education and its assessment, and how were they motivated and adopted; what new textbooks appeared and what new methodological ideas were offered in them; how and why mathematics teacher education and/or professional development changed; what was the role (if any) of foreign influences on mathematics education, etc. The book will be of interest to both researchers in mathematics education and practitioners--teachers, as well as a broader audience of historians and educators exploring the political aspects of education.
