**The 100 Best Astrophotography Targets** Ruben Kier, 2009-08-15 Any amateur astronomer who is interested in astrophotography, particularly if just getting started, needs to know what objects are best for imaging in each month of the year. These are not necessarily the same objects that are the most spectacular or intriguing visually. The camera reveals different things and has different requirements. What objects in the sky tonight are large enough, bright enough, and high enough to be photographed? This book reveals, for each month of the year, the choicest celestial treasures within the reach of a commercial CCD camera. Helpful hints and advice on framing, exposures, and filters are included. Each deep sky object is explained in beautiful detail, so that observers will gain a richer understanding of these astronomical objects. This is not a book that dwells on the technology of CCD, Webcam, wet, or other types of astrophotography. Neither is it a book about in-depth computer processing of the images (although this topic is included). Detailed discussions of these topics can be found in other publications. This book focuses on what northern latitude objects to image at any given time of the year to get the most spectacular results.

**What is Ancient Philosophy?** Pierre Hadot,2002 Hadot shows how the schools, trends, and ideas of ancient Greek and Roman philosophy strove to transform the individual's mode of perceiving and being in the world. For the ancients, philosophical theory and the philosophical way of life were inseparably linked. Hadot asks us to consider whether and how this connection might be reestablished today.

**Flowcasting the Retail Supply Chain** André J. Martin,Mike Doherty,Jeff Harrop,2006 Despite the myraid supply chain management approaches that have been spawned over the last decade or more, retailers have been unable to put a dent in out-of-stocks at store level, Why is that? Andre' Martin, Mike Doherty, and Jeff Harrop- all experienced practitioners, consultants, and implementation specialists in the field of time-phased supply chain planning - have been asking themselves the same question and have come to the conclusion that 1) far less forecasting is needed in the retail supply chain and 2) the only forecasting that needs to happen is at the store shelf. Flowcasting the Retail Supply Chain outlines a breakthrough approach for supply chain planning that mimics the natural flow of products from the factory to the consumer. It is the first and only approach that truly puts the consumer front and center when planning the supply chain.

*Globalizing Indian Thought* Debashis Chatterjee,Deepa Sethi,Surya Prakash Pati,2021-11-29 The overarching principle that once integrated India's institutions is often described by the word 'dharma'. The notion of dharma goes well beyond what is known as

'rule of law'. Rule of law is about publicly disclosed legal codes and processes. Dharma, on the other hand, is the holding principle that encompasses the whole of nature, including human nature. Dharma is much more nuanced and yet, paradoxically, more unambiguous than rule of law. The research presented in Globalizing Indian Thought tells us that India will do well to hark back to its 'sanatana dharma'. The book decodes and deliberates on a few big ideas with the hope to shape India's story on the world stage. It would be of interest to anyone who wishes to know how we can bring in ideas that are inherently Indian to broaden the discourse on matters of national and international importance.

*The Shadow of Imana* Véronique Tadjo, 2015-03-04 As evidence emerged of the genocide in Rwanda in 1994, the outside world reeled in shock. What could have motivated these individual and collective acts of evil? In 1998, Véronique Tadjo traveled to Rwanda to try to find out. She started with the premise that what happened in Rwanda concerns us all: "We need to understand. Our humanity is in peril." *The Shadow of Imana* is a reminder that humankind the world over is capable of genocide. Records of what the author saw—sites of massacres, corpses, weapons dumps—are combined with personal stories of traumatized returnees, bereaved survivors, rape victims, orphans, lawyers faced with the impossible task of doing justice, prisoners. But Tadjo's story goes beyond mere reportage of death and cruelty. Her poetically wrought account incorporates traditional

tales, explores the spiritual legacy of the genocide, and uncovers a healing vitality as well as a commitment to forgiveness. Véronique Tadjó was born in Paris and grew up in Côte d'Ivoire. The Shadow of Imana has been translated from the French by Véronique Wakerley.

**Arabic for Nerds** Gerald Drißner, 2015-10-16 FILL THE GAPS. Arabic for Nerds 1 will push you from the intermediate to the advanced level. Gerald Drißner has been collecting interesting facts about Arabic grammar, vocabulary and expressions, hints and traps for almost ten years. Finally he has compiled them to a book: Arabic for Nerds. This book should fill a gap. There are plenty of books about Arabic for beginners, but it is difficult to find good material for intermediate students. This book is suitable for readers who have been studying Arabic for at least two years. Readers should have a sound knowledge of vocabulary (around 3000 words) and know about tenses, verb moods and plurals. If a student wants to reach an advanced level, it is not about learning vocabulary lists - it is about understanding the fascinating core of Arabic. Arabic for Nerds doesn't teach vocabulary, nor are there exercises. This book explains how Arabic works and gives readers hints in using and understanding the language better. Since most of the Arabic

words are given in translation, the reader should be able to read this book without a dictionary. This is what Arabic for Nerds is all about. It is specifically intended for intermediate learners.

An Introduction to Statistical Learning Gareth James, Daniela Witten, Trevor Hastie, Robert Tibshirani, 2013-06-24 An Introduction to Statistical Learning provides an accessible overview of the field of statistical learning, an essential toolset for making sense of the vast and complex data sets that have emerged in fields ranging from biology to finance to marketing to astrophysics in the past twenty years. This book presents some of the most important modeling and prediction techniques, along with relevant applications. Topics include linear regression, classification, resampling methods, shrinkage approaches, tree-based methods, support vector machines, clustering, and more. Color graphics and real-world examples are used to illustrate the methods presented. Since the goal of this textbook is to facilitate the use of these statistical learning techniques by practitioners in science, industry, and other fields, each chapter contains a tutorial on implementing the analyses and methods presented in R, an extremely popular open source statistical software platform. Two of the authors co-wrote The Elements of Statistical Learning (Hastie, Tibshirani and Friedman, 2nd edition 2009), a popular reference book for statistics and machine learning researchers. An Introduction to Statistical Learning covers many of the same topics, but at a level accessible to a much broader audience. This book is targeted at statisticians and non-statisticians alike who wish to use cutting-edge statistical learning techniques to analyze their data. The text assumes only a previous course in linear regression and no knowledge of matrix algebra.

28 JOBS, 28 WEEKS, 28 STATES Jubanashwa Mishra,2022-09-12 Description At age 28, when most people are expected to settle down or risk disaster, Jubanashwa Mishra decided on an extraordinary adventure. He had recently realized that he was in the wrong job and had given it up; he had tried to get over his first-and unrequited-love, but failed. Something had to change. Following the example of Sean Aiken, who spent 52 weeks working 52 jobs across Canada and USA, he began a journey that he hoped would help him discover his true passion. Over the next 28 weeks, he travelled to 28 states of India-by train, bus, shared taxi, airplane, bike, boat, and on foot-spending a week at a different job in each state. This compelling book draws upon that 25,000-kilometre journey. We travel with Jubanashwa and discover what it takes to manage a small hotel in Udaipur; clean hillsides in Dharamshala; cremate dead bodies on the ghats of Varanasi; sell condoms in Bihar's villages, and peanuts on Chennai's Marina beach; help a caregiver looking after HIV positive patients in Shillong; go river-rafting in Jammu and Kashmir; and assist a tattoo artist in Goa and a motorbike mechanic in Aizawl. In between, there are memorable encounters with Buddhist monks, Aghori sadhus, Naxalites, Bollywood publicists, drug dealers and aged hippies-and a brief reunion with Sameen, the woman Jubanashwa had

lost his heart to. Funny, moving and always entertaining, this memoir-cum-travelogue is a record of a young man's unusual journey of self-discovery, and an inspiration for all of us who want to take a chance in life and follow our dreams.
