White Screens/Black Images James Snead,2016-07-22 Hollywood's representation of blacks has been consistently misleading, promoting an artificially constructed mythology in place of historical fact. But how, James Snead asks, did black skin on screen develop into a complex code for various types of white supremacist discourse? In these essays, completed shortly before his death in 1989, James Snead offers a thoughtful inquiry into the intricate modes of racial coding in Hollywood cinema from 1915 to 1985. Snead presents three major methods through which the racist ideology within film functions: mythification, in which black images are correlated in a larger sceme of semiotic valuation where the dominant I needs the marginal other in order to function effectively; marking, in which the color black is repeatedly over-determined and redundantly marked, as if to force the viewer to register the image's difference from white; and omission--the repetition of black absence from positions of autonomy and importance. White Screens/Black Images offers an array of film texts, drawn from both classical Hollywood cinema and black independent film culture. Individual chapters analyze Birth of a Nation , King Kong , Shirley Temple in The Littlest Rebel and The Little Colonel , Mae West in I'm No Angel , Marlene Dietrich in Blonde Venus , Bette Davis in Jezebel , the racism of Disney's Song of the South , and Taxi Driver . Making skillful use of developments in both structuralist and post-structuralist film theory, Snead's work speaks not only to the centrality of race in Hollywood films, but to its centrality in the formation of modern American culture.

Digital Mammography Nico Karssemeijer,Martin Thijssen,Jan Hendriks,Leon van Erning,2012-12-06 In June 1998 the Fourth International Workshop on Digital Mammography was held in Nijmegen, The Netherlands, where it was hosted by the department of Radiology of the University Hospital Nijmegen. This series of meetings was initiated at the 1993 SPIE Biomedical Image Processing Conference in San Jose, USA, where a number of sessions were entirely devoted to mammographic image analysis. At very successful subsequent workshops held in York, UK (1994) and Chicago, USA (1996), the scope of the conference was broadened, establishing a platform for presentation and discussion of new developments in digital mammog raphy. Topics that are addressed at these meetings are computer-aided diagnosis, image processing, detector development, system design, observer performance and clinical evaluation. The goal is to bring researchers from universities, breast cancer experts, and engineers together, to exchange information and present new scientific developments in this rapidly evolving field. This book contains all the scientific papers and posters presented at the work shop in Nijmegen. Contributions came from as many as 20 different countries and 190 participants attended the meeting. At a technical exhibit companies demon strated new products and work in progress. Abstracts of all papers were reviewed by members of the scientific committee. Many of the accepted papers had excellent quality, but due to limited space not all of them could be included as full papers in these proceedings. Papers that were rated high by the reviewers are included as long or short papers, others appear as extended abstracts in the last chapter.
