Scribbles and Ink Ethan Long,2023-07 Two artists, two styles, and one book that may not be big enough for the both of them. See, Ink (the mouse) likes things to be clean and precise. Scribbles (the cat) is the opposite. But while there should be plenty of room for each of them to make their art without getting in each others way, or on each others nerves, THEY CAN'T MANAGE THAT! And from there paint splatters, ink goops, pencils get broken and brushes go wild until... it's not a work of art, IT'S A MESS! Discovering that they are no longer having any fun, the duo tentatively tries to collaborate instead of clobber, and, thus, a disaster-piece becomes a masterpiece. With this much creative friction, will this disaster-piece ever become a masterpiece?

Handbook of Mathematical Models and Algorithms in Computer Vision and Imaging Ke Chen,Carola-Bibiane Schönlieb,Xue-Cheng Tai,Laurent Younes,2023-02-24 This handbook gathers together the state of the art on mathematical models and algorithms for imaging and vision. Its emphasis lies on rigorous mathematical methods, which represent the optimal solutions to a class of imaging and vision problems, and on effective algorithms, which are necessary for the methods to be translated to practical use in various applications. Viewing discrete images as data sampled from functional surfaces enables the use of advanced tools from calculus, functions and

calculus of variations, and nonlinear optimization, and provides the basis of high-resolution imaging through geometry and variational models. Besides, optimization naturally connects traditional model-driven approaches to the emerging data-driven approaches of machine and deep learning. No other framework can provide comparable accuracy and precision to imaging and vision. Written by leading researchers in imaging and vision, the chapters in this handbook all start with gentle introductions, which make this work accessible to graduate students. For newcomers to the field, the book provides a comprehensive and fast-track introduction to the content, to save time and get on with tackling new and emerging challenges. For researchers, exposure to the state of the art of research works leads to an overall view of the entire field so as to guide new research directions and avoid pitfalls in moving the field forward and looking into the next decades of imaging and information services. This work can greatly benefit graduate students, researchers, and practitioners in imaging and vision; applied mathematicians; medical imagers; engineers; and computer scientists.

  Necessary Conditions of Learning Ference Marton,2014-06-20 Necessary Conditions of Learning presents a research approach (phenomenography) and a theory (the variation theory of learning) introduced and developed by Ference

Marton and taken up by his wide and varied following around the world—together with their practical applications in educational contexts. Reflecting Marton's whole lifetime's work, the unique and significant contribution of this book is to offer an evidence-based answer to the questions How do we make novel meanings our own? and How do we learn to see things in more powerful ways? The presentation makes use of hundreds of empirical studies carried out in Europe and Asia which build on the theory. The line of reasoning and the way in which the examples are put together is consistent with the theory—it is both presented and applied. The main argument is that in order to learn we have to discern, and to discern the intended ideas we must be presented with carefully structured variation, against a background of invariance. We then go through processes of contrast, generalization, and fusion in order to make sense. These insights form a practical framework for those who design teaching and teaching materials. Necessary Conditions of Learning is a major original work for which scholars of pedagogical theory have been waiting a long time.

  Line and Scribble Debora Vogrig,2021-05-11 Line and Scribble is a picture book that celebrates imagination and friendship through simple shapes. Line and Scribble do things differently. Line goes straight while Scribble wanders. Line walks a tightrope as Scribble bursts into fireworks. Line likes to draw with a ruler, and Scribble, well . . . doesn't. But no matter how different they may seem, Line and Scribble always have enough in common to be

best friends. • A friendship story that embraces differences instead of competing • Emphasizes how imagination, creativity, and art can change how we see the world—and each other • Promotes visual literacy, recognition, and learning to make connections From constellations to roller coasters and breadsticks to bubbles, Line and Scribble shows how the two can come together to create beautiful, moving, and delightfully unexpected results. This sweet book brims with opportunities for young readers to engage with the building blocks of familiar shapes (lines, circles, squiggles), as well as spotting opposites and differences. • Harold and the Purple Crayon meets Press Here in this highly visual, effortlessly imaginative friendship story. • Resonates year-round as a go-to new gift for birthdays and holidays • Perfect for children ages 3 to 5 years old • Makes a great pick for parents and grandparents, as well as librarians and teachers. • You'll love this book if you love books like Mouse Paint by Ellen Stoll Walsh, I'm NOT just a Scribble . . . by Diane Alber, and Eraser by Anna Kang.
