Flip the Script Oren Klaff,2019-08-13 THE BESTSELLING AUTHOR OF PITCH ANYTHING IS BACK TO FLIP YOUR ENTIRE APPROACH TO PERSUASION. Is there anything worse than a high-pressure salesperson pushing you to say yes (then sign on the dotted line) before you're ready? If there's one lesson Oren Klaff has learned over decades of pitching, presenting, and closing long-shot, high-stakes deals, it's that people are sick of being marketed and sold to. Most of all, they hate being told what to think. The more you push them, the more they resist. What people love, however, is coming up with a great idea on their own, even if it's the idea you were guiding them to have all along. Often, the only way to get someone to sign is to make them feel like they're smarter than you. That's why Oren is throwing out the old playbook on persuasion. Instead, he'll show you a new approach that works on this simple insight: Everyone trusts their own ideas. If, rather than pushing your idea on your buyer, you can guide them to discover it on their own, they'll believe it, trust it, and get excited about it. Then they'll buy in and feel good about the chance to work with you. That might sound easier said than done, but Oren has taught thousands of people how to do it with a series of simple steps that anyone can follow in any situation. And as you'll see in this book, Oren has been in a lot of different situations. He'll show you how he got a billionaire to take him seriously, how he got a venture capital firm to cough up capital, and how he made a skeptical Swiss banker see him as an expert in banking. He'll even show you how to become so compelling that buyers are even more attracted to you than to your product. These days, it's not enough to make a great pitch. To get attention, create trust, and close the deal, you need to flip the script.

Scriptinformatics Dr. habil. Gábor Hosszú,2021-02-05 Scripts (writing systems) usually belong to specific languages and have temporal, spatial and cultural characteristics. The evolution of scripts has been the subject of research for a long time. This is probably because the long-term development of human thinking is reflected in the surviving script relics, many of which are still undeciphered today. The book presents the study of the script evolution with the mathematical tools of systematics, phylogenetics and bioinformatics. In the research described, the script is the evolutionary taxonomic unit (taxon), which is analogous to the concept of biological species. Among the methods of phylogenetics, phenetics classifies the investigated taxa on the basis of their morphological similarity, and does not primarily examine genealogical relationships. Due to the scarcity of morphological diversity of scripts' features, random

coincidences of evolution-independent features are much more common in scripts than in biological species, thus phenetic modelling based solely on morphological features can lead to erroneous results. For this reason, phenetic modeling has been extended with evolutionary considerations, thereby allowing the modelling uncertainties observed in the script evolution to be addressed due to the large number of random coincidences (homoplasies) characterizing each script. The book describes an extended phenetic method developed to investigate the script evolution. This data-driven approach helps to reduce the impact of the uncertainties inherent in the phenetic model due to the large number of homoplasies that occur during the evolution of scripts. The elaborated phenetic and evolutionary analyses were applied to the Rovash scripts used on the Eurasian Steppe (Grassland), including the Turkic Rovash (Turkic Runic/runiform) and the Székely-Hungarian Rovash. The evaluation of the extended phenetic model of the scripts, the various phenograms, the script spectra and the group spectra helped to reconstruct the main ancestors and evolutionary stages of the investigated scripts.

Arabic Script in Motion M. Javad Khajavi,2019-04-12 This book is a pioneering study of temporal typography and time-based calligraphic art written in the Arabic system of writing. Inspired by the innate qualities of Arabic script as well as certain practices in Islamic calligraphy and contemporary calligraphic art, the book devises five broad categories of temporal behaviors for Arabic characters in time-based media. It goes onto expand the vocabulary used to describe Arabic script's appearance in time-based media and proposes a theory to help artists, practitioners, and theoreticians push the boundaries of temporal text-based art. Furthermore, it tackles questions of legibility and readability, and seeks to understand how temporality of Arabic text influences the creation of meaning. This book will therefore appeal not only to animators, designers, and artists, but also to commentators and scholars who deal with temporal text-based art written in Arabic script.
