Catalogue of fishing gear in the Mediterranean and Black Sea region Lucchetti, A., Petetta, A., Bdioui, M., Gökçe, G., Saber, M., Sacchi, J., Ozbilgin, H., Carlson, A., Carpentieri, P.,2023-10-30 The wide variety of marine species of the Mediterranean and the Black Sea, found in different geographical subregions and habitats, has led to the development of a highly diversified fishing sector characterized by a broad range of fishing gear. Over time, harvesting marine resources has become more efficient due to a progressively improving understanding of the habits and behaviours of the various target species. In order to find ways to conserve fish resources and the marine environment, there is a need to further study these different types of fishing gear as well as to develop less impactful techniques. To this end, a comprehensive overview of fishing gear and methods in use in the Mediterranean and the Black Sea can facilitate the mitigation of incidental catch of vulnerable species, the mitigation of adverse impacts of fisheries on juvenile fish and discards, the decarbonization of fishing fleets through more energy efficient gear, the development of innovative gear to remove marine litter, and the reduction of lost, abandoned and otherwise discarded fishing gear, to name a few. This catalogue aims to provide such an overview and to describe the main technical characteristics and modes of use of fishing gear in operation in the region, considering specificities and differences not only at the regional level but also at the country and local levels.

Marine Geology and Geotechnology of the South China Sea and Taiwan Strait Ronald C. Chaney,2020-11-24 The waters and rich resources of the South China Sea are claimed by seven different countries, and it is estimated that approximately 40% of the world's trade moves through the area. *Marine Geology and Geotechnology of the South China Sea and Taiwan Strait* examines the physiology, geology, and potential development of this important portion of

the western Pacific Ocean's largest marginal sea. The book covers multiple oceanographic topics, and further discusses topography, sedimentation, wave generation, and hazards such as earthquakes, storm surges, and tsunamis. Features: Examines seabed material, such as clays, calcareous, siliceous, and various other organic sediments Presents different potential routing strategies for sea crossings using tunnels, bridges, or a combination of both Provides bridge design recommendations considering aesthetics, seismic and wind issues, potential vessel collisions, and more Includes a historical timeline and useful maps regarding the political complexity of the area and the various territorial claims made by different nations Marine Geology and Geotechnology of the South China Sea and Taiwan Strait serves as a valuable resource for geotechnical engineers, marine geologists, civil engineers, and professionals concerned with the region.

Stewart, 2018-12-05 This book gathers invited contributions from active researchers to provide an up-to-date overview of the geological setting of the Red Sea. It discusses aspects ranging from historical information to modern research in the Red Sea, and presents findings from rapidly advancing, emerging fields. This semi-enclosed young ocean basin provides a unique opportunity to study the development of passive continental margins in order to examine the current status of that region. In addition to studies on the Sea itself, it includes those from related fields on the littoral zone. The book is of interest to geoscientists and non-specialists alike.

Godforsaken Sea Derek Lundy,2012-09-20 Godforsaken Sea is the hair-raising account of the world's most demanding, dangerous, and deadly sailing race. Around the world, one sailor, one boat, no stops, no assistance. Author Derek Lundy's vivid book follows the field of the 1996 - 1997 Vendee Globe through the race's grueling four-month circumnavigation of the globe, most of it through the terror of the Southern Ocean. Lundy narrates the race through the eyes and experiences of sixteen sailors - fourteen men and two women - who embody the best and most eccentric aspects of our human condition. There's the gallant Brit who spends days beating back against the worst seas to save a fellow sailor; the Frenchman who bothers to salvage only a bottle of champagne from his broken and sinking boat; the sailor who comes to love the albatross that trails her for months, naming it Bernard; the sailor who calmly smokes a cigarette as his boat capsizes; and the Canadian who, hours before he disappears forever, dispatches this message: If you drag things out too long here, you're sure to come to grief. With the literary touch of Saint-Exupery and Conrad, Derek Lundy harnesses hurricane-force winds, six story waves, icebergs, and deafening noise. And he lays bare the spirit of the men and women who push themselves to the outer limits of human endeavor - even if it means never returning home.

Decline of the Steller Sea Lion in Alaskan Waters National Research Council,Division on Earth and Life Studies,Polar Research Board,Ocean Studies Board,Committee on the Alaska Groundfish Fishery and Steller Sea Lions,2003-04-04 For an unknown reason, the Steller sea lion population in Alaska has declined by 80% over the past three decades. In 2001, the National Research Council began a study to assess the many hypotheses proposed to explain the sea lion decline including insufficient food due to fishing or the late 1970s climate/regime shift, a disease epidemic, pollution, illegal shooting, subsistence harvest, and predation by killer whales or sharks. The report's analysis indicates that the population decline cannot be explained only by a decreased availability of food; hence other factors, such as predation and illegal shooting, deserve further study. The report recommends a management strategy that could help determine the impact of fisheries on sea lion survival-establishing open and closed fishing areas around sea lion rookeries. This strategy would allow researchers to study sea lions in relatively controlled, contrasting environments. Experimental area closures will help fill some short-term data gaps, but long-term monitoring will be required to understand why sea lions are at a fraction of their former abundance.

The Egyptian Red Sea Eric Hanauer,1988 The Encyclopedia of Social Media and Politics explores how the rise of social media is altering politics both in the United States and in key moments, movements, and places around the world. Its scope encompasses the disruptive technologies and activities that are changing basic patterns in American politics and the amazing transformations that social media use is rendering in other political systems heretofore resistant to democratization and change. In a time when social media are revolutionizing and galvanizing politics in the United States and around the

world, this encyclopedia is a must-have reference. It reflects the changing landscape of politics where old modes and methods of political communication from elites to the masses (top down) and from the masses to elites (bottom up) are being displaced rapidly by social media, and where activists are building new movements and protests using social media to alter mainstream political agendas.
