The Digital City and Mediated Urban Ecologies Kristin Scott, 2016-10-28 This book examines the phenomenon of the “digital city” in the US by looking at three case studies: New York City, San Antonio, and Seattle. Kristin Scott considers how digital technologies are increasingly built into the logic and organization of urban spaces and argues that while each city articulates ideals such as those of open democracy, civic engagement, efficient governance, and enhanced security, competing capitalist interests attached to many of these digital technological programs make the “digital city” problematic.

The Temporary European Cameron Hewitt,2022-02-01 Write guidebooks, make travel TV, lead bus tours? Cameron Hewitt has been Rick Steves' right hand for more than 20 years, doing just that. The Temporary European is a collection of vivid, entertaining travel tales from across Europe. Cameron zips you into his backpack for engaging and inspiring experiences: sampling spleen sandwiches at a Palermo street market; hiking alone with the cows high in the Swiss Alps; simmering in Budapest's thermal baths; trekking across an English moor to a stone circle; hand-rolling pasta at a Tuscan agriturismo; shivering through Highland games in a soggy Scottish village; and much more. Along the way, Cameron introduces us to his favorite Europeans. In Mostar, Alma demonstrates how Bosnian coffee isn't just a drink, but a social ritual. In France, Mathilde explains that the true mastery of a fromager isn't making cheese, but aging it. In Spain, Fran proudly eats acorns, but never corn on the cob. While personal, the stories also tap into the universal joy of travel. Cameron's travel motto (inspired by a globetrotting auntie) is Jams Are Fun—the fondest memories arrive when your best-laid plans go sideways. And he encourages travelers to stow their phones and guidebooks, slow down, and savor those magic moments that arrive between stops on a busy itinerary. The stories are packed with inspiration and insights for your next trip, including how to find the best gelato in Italy, how to select the best produce at a Provençal market, how to navigate Spain's confusing tapas scene, and how to survive the experience of driving in Sicily (hint: just go numb). And you'll get a reality check for every traveler's dream job: researching and writing guidebooks; guiding busloads of Americans on tours around Europe; scouting and producing a travel TV show; and working with Rick Steves and his merry band of travelers. It's a candid account of how the sausage gets made in the travel business—told with warts-and-all honesty and a sense of humor. For Rick Steves fans, or anyone who loves Europe, The Temporary European is inspiring, insightful, and fun.

Freeway Traffic State Detection Using CCTV Stationary Images ,2012 Traffic detection and data collection are essential to transportation planning and management. The CCTV (Closed Circuit Television) traffic cameras have been increasingly deployed for traffic surveillance on major roadways by DOT (Department of Transportation) in the U.S. However, the real-time traffic video data is still very limited to be published online because of the large load to the video servers and internet connections. As a result, the traffic snapshots which are clipped from the video data are widely used as an effective approach to publish the real-time traffic conditions through internet. Currently, almost all U.S. states can provide traffic snapshots via DOT or traveler information websites (511 System). These traffic snapshots are published and updated every 1 minute to 5 minutes in different states. They are potential new traffic data source that can be obtained free from internet without additional equipment and instruction cost. They can provide valuable traffic information to analyze traffic flow patterns and congestion status, where no other detectors are available. How to utilize these online CCTV snapshots effectively for traffic detection and data collection would be of practical significance. In this research, a novel traffic state detection model is developed, which could contribute to both academic and industry fields. The primary contribution of this study is to provide an effective solution to detect the traffic state using the CCTV stationary images. Traffic space occupancy is used as a reliable measure for quantitative traffic analysis and congestion estimation. The practical value of the proposed approach is that it turns widely freely available video source from internet into useful traffic information, and this could be done without interfering the existing CCTV system in DOT. The traffic image data used in this study were collected from I-894 freeway corridor in Milwaukee, Wisconsin. I proposed a model to measure the traffic space occupancy, which could not be measured directly in the field. In addition, a perspective transformation method is provided to estimate the traffic parameters without accurate camera calibration. The proposed algorithms and image processing were implemented in MATLAB. The model validation is performed with field loop detector data collected from the same roadway segments. The model performance was evaluated under different traffic status, illumination conditions, and roadway geometry. The validation and evaluation results indicate that the proposed model has a robust detecting capability for traffic status.
