Construction Calculations Manual Sidney M Levy, 2011-09-19 Construction Calculations is a manual that provides end users with a comprehensive guide for many of the formulas, mathematical vectors and conversion factors that are commonly encountered during the design and construction stages of a construction project. It offers readers detailed calculations, applications and examples needed in site work, cost estimation, piping and pipefitting, and project management. The book also serves as a refresher course for some of the formulas and concepts of geometry and trigonometry. The book is divided into sections that present the common components of construction. The first section of the books starts with a refresher discussion of unit and systems measurement; its origin and evolution; the standards of length, mass and capacity; terminology and tables; and notes of metric, U.S, and British units of measurements. The following concepts are presented and discussed throughout the book: Conversion tables and formulas, including the Metric Conversion Law and conversion factors for builders and design professionals Calculations and formulas of geometry, trigonometry and physics in construction Rudiments of excavation, classification, use of material, measurement and payment Soil classification and morphology, including its physicochemical properties Formulas and calculations needed for soil tests and evaluations and for the design of retaining structures Calculations relating to concrete and masonry Calculations of the size/weight of structural steel and other metals Mechanical properties of wood and processing of wood products Calculations relating to sound and thermal transmission Interior finishes, plumbing and HVAC calculations Electrical formulas and calculations Construction managers and engineers, architects, contractors, and beginners in engineering, architecture, and construction will find this practical guide useful for managing all aspects of construction. Work in and convert between building dimensions, including metric Built-in right-angle solutions Areas, volumes, square-ups Complete stair layouts Roof, rafter and framing solutions Circle: arcs, circumference, segments

**Seismic Design of Buildings and Bridges** Alan Williams, 2000 This resource is written for engineers preparing for the National Structural, the Special Civil Engineer Exam-California, and the exam used in 26 Western states. The book has been written to assist candidates preparing for the seismic principles examinations. It is a comprehensive guide and reference for self study based on the 1997 edition of the Uniform Building Code. An introductory chapter describes the California Special Civil Engineer and Structural Engineer Exams and the NCEES Structural Examinations. Subsequent chapters cover general seismic principles, static and dynamic lateral force procedures for buildings, seismic design of steel, concrete, wood and masonry structures, and seismic design of bridges. It provides 18 structural design programs for the HP-45G calculators as well as 100 example problems, including 50 multiple-choice questions. A detailed step-by-step solution is provided for all problems. The work is 30% text and 70% problems and solutions.
