Manufacturing Transformation Carol Newman,John Page,John Rand,Abebe Shimeles,Måns Söderbom,Finn Tarp,2016 A study prepared by the United Nations University World Institute for Development Economics Research (UNU-WIDER).

Manufacturing Transformation Carol Newman,John Page,John Rand,Abebe Shimeles,Måns Söderbom,Finn Tarp,2016-07-14 While it is possible for economies to grow based on abundant land or natural resources, more often structural change-the shift of resources from low-productivity to high-productivity sectors-is the key driver of economic growth. Structural transformation is vital for Africa. The region's much-lauded growth turnaround since 1995 has been the result of making fewer economic policy mistakes, robust commodity prices, and new discoveries of natural resources. At the same time, Africa's economic structure has changed very little. Primary commodities and natural resources still account for the bulk of the region's exports. Industry is most often the leading driver of structural transformation. Africa's experience with industrialization over the past thirty years has been disappointing. In 2010, sub-Saharan Africa's average share of manufacturing value added in GDP was ten per cent, unchanged from the 1970s. Actually, the share of medium- and high-tech goods in manufacturing production has been falling since the mid-1990s. Per capita manufactured exports are less than ten per cent of the developing country average. Consequently, Africa's industrial transformation has yet to take place. This book presents results of comparative country-based research that sought to answer a seemingly simple but puzzling question: why is there so little industry in Africa? It brings together detailed country case studies of industrial policies and industrialization outcomes in eleven countries, conducted by teams of national researchers in partnership with international experts on industrial development. It provides the reader with the most comprehensive description and analysis available to date of the contemporary industrialization experience in low-income Africa. This is an open access title available under the terms of a CC BY-NC-SA 3.0 IGO licence. It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations.

Challenging the third sector Kenny, Sue,Taylor, Marilyn,2016-06-01 This is the first book to explore the different relationships between active citizenship and civil society, particularly the third sector within civil society. In what ways can the third sector nurture active citizenship? How have the third sector and active citizenship been constructed and reconstructed both locally and internationally, over recent years? To what extent have new kinds of social connectedness, changing forms of political engagement and increasingly complex social and environmental problems influenced civil society action? Written by experts in the field, this important book draws on a range of theory and empirical studies to explore these questions in different socio-political contexts and will be a useful resource for academics and students as well as practitioners.

China's Economic Gene Mutations Zhaoguang Hu,Jian Zhang,Ning Zhang,2015-07-30 The book focuses on low-carbon issues and China's economy, which is analyzed from the perspective of electricity economics. It proposes the novel concept of an "economic gene" to reflect certain characteristics of the economy. The gene mapping of China's economy has been studied based on production functions with electricity. Economic mutations have also been studied with the aim of diagnosing problems in the economy. Two such mutations have occurred in China since 1978, the most recent being in 2012 and no further mutation is expected until 2025. The book describes the inherent quality of China's economy from 2012 to 2025, and how mechanism reforms would greatly improve marginal representative factor productivity in this period. The agents response equilibrium (ARE) approach to simulate national economy, based on multi-agent technology is proposed. Another cornerstone of the model is the input-output table. Simulated input-output tables from 2011 to 2025 are provided in the book. This book provides recommendations for policy makers and advisors, and is a valuable resource for researchers in the fields of economics, public policies, low-carbon development, electricity and energy. It also provides insights into China's economic development.

Food Supply Networks Maurizio Canavari,Melanie Fritz,Gerhard Schiefer,2015-11-27 When relations are facilitated by communication technologies such as e-business, food supply networks can improve efficiency, flexibility and effectiveness. However, a lack of trust within such transactions can prevent the integration of e-business into this large, economic sector. Using case studies from European countries, chapters discuss trust-building methods for food networks in an e-business environment. Key issues include the influence of cultural disparity and cross-border transactions upon major product groups such as meat, cereal products and fresh produce.

Radio Network Planning and Optimisation for UMTS Jaana Laiho,Achim Wacker,Tomáš Novosad,2005-04-08 Radio Network Planning and Optimisation for UMTS comprehensively explains how to dimension, plan and optimise UMTS (Universal Mobile Telecommunications System) networks. It introduces the properties of the spread spectrum system and provides a general overview of the physical layer of UTRA FDD. The radio network planning process for WCDMA is clearly presented and detailed information on how to dimension, plan and rollout a 3G network, both theoretically and practically is provided. This valuable text examines current and future radio network management issues and their impact on network performance as well as the relevant capacity and coverage enhancement methods. * Includes automation examples of radio resource management * Focuses on UTRA FDD and introduces UTRA TDD, GPRS and EDGE and examines their interaction and synergy * Provides an excellent source of information for those considering future cellular networks where Quality of Service (QoS) is of paramount importance * Analyses the radio network planning challenges and opportunities for both greenfield and existing operators * Includes an accompanying CD-ROM featuring a static radio network simulator implemented in MATLAB(r) Authoritative and instructive, this text will have instant appeal to wireless operators and network and terminal manufacturers. It will also be essential reading for university students, frequency regulation bodies and everyone interested in radio network planning and optimisation, especially RF network systems engineering professionals.

The Use of Emissions Trading in Relation to Other Means of Reducing Emissions ,2006 For quite a long time the Nordic countries have had explicitly formulated climate change strategies and have used various measures intended to curb emissions. Since 1 January 2005 an emissions trading scheme is in operation within the European Union, after several years of preparation. When

setting climate policies the Nordic countries must take this new instrument into account, and try and find the right balance between emissions trading and other means of reducing emissions. This study analyzes how the Nordic countries have dealt with or plan to deal with the conditions of the EU emissions trading system and the relation to other measures to curb emissions.

Sustaining Export-Oriented Development Ross Garnaut, Enzo Grilli, James Riedel, 1995-09-29 This book, first published in 1995, looks at the East Asian economies' post-war development and assesses the possibilities of transferring East Asian development elsewhere. Written and edited by economists, Sustaining Export-Oriented Development traces the changes in the thinking of policy makers and advisers about the policies required for economic development - especially the changed emphasis from import-substitution to outward-orientation which coincided with the East Asian economies' success. Several contributors focus on identifying the key factors in the growth of these dynamic economies. Others look at future constraints such as the environmental limits to growth and the sustainability of export growth in China. This book makes a significant contribution to the discussion of economic growth and development issues and will be of interest to those in economics, trade and aid, and others concerned with public policy.

Canadian Natural Resource and Environmental Policy Melody Hessing, Michael Howlett, 1997 This book examines policy-making in one of the most significant areas of activity in the Canadian economy -- natural resources and the environment. It discusses the evolution of resource policies from the early era of exploitation to the present era of resource and environmental management. Using an integrated political economy and policy perspective, the book provides an analytic framework from which the foundation of ideological perspectives, administrative structures, and substantive issues are explored. The integration of social science perspectives and the combination of theoretical and empirical work make this innovative book one of the most comprehensive analyses of Canadian natural resource and environmental policy to date.

Managing Macroeconomic Policies for Sustainable Growth John Asafu-Adjaye, Renuka Mahadevan, 2012-01-01 'These experienced economists use CGE modelling to analyse the consequences of significant contemporary economic and environmental policies in several Asia-Pacific countries and in Africa. This has not been done previously for several of the economies concerned. This path-breaking, economy-wide study assesses policies relating to agricultural development, trade and industrial development, energy, greenhouse gases and climate change. This readable book should appeal to a wide audience, including students, policymakers and researchers.' Clem Tisdell, University of Queensland, Australia The authors expertly reveal a model-based analysis of economic development and environmental issues with policy prescriptions for enhancing sustainable development. Within the last four decades, there has been a rapid deterioration in the quality of our environmental and natural resources, raising grave concerns about the sustainability of unbridled economic growth. In light of these concerns, the authors analyse a range of economic and environmental issues, and propose policy recommendations that would enhance sustainable economic growth. The book covers a variety of issues related to economic development, trade, energy and climate change, and focuses on countries in the Asia-Pacific region including Australia, Thailand, Papua New Guinea and Fiji. *Managing Macroeconomic Policies For Sustainable Growth* uniquely discusses aspects of the CGE modelling approach that will prove informative for academic researchers and postgraduate students in the areas of economic development and environmental policy. This original book will also appeal to policy analysts and policymakers in public and private institutions.

Innovation and Employment Charles Edquist, Leif Hommen, Maureen D. McKelvey, 2001-01-01 This book is an important addition to what can be broadly referred to as the national systems of innovation (NSI) approach. The particular contribution of the book is in the examination of the employment effects of innovation, something only indirectly considered hitherto. . . It is a thorough integration of existing knowledge on the key employment implications of innovation. . . Rachel Parker, Labour and Industry This is a highly readable, non-technical book . . . a highly clear and well-argued book that should be useful for policymakers and higher education alike. It brings together much of the most recent and useful literature in the area of innovation, employment and related public policy. It is an opportune addition to the existing documentation on the subject. *Journal of Economics / Zeitschrift für Nationalökonomie* Which kinds of growth lead to increased employment and which do not? This is one of the questions that this important volume attempts to answer. The book explores the complex relationships between innovation, growth and employment that are vital for both research into, and policy for, the creation of jobs. Politicians claiming that more rapid growth would remedy unemployment do not usually specify what kind of growth is meant. Is it, for example, economic (GDP) or productivity growth? Growing concern over jobless growth requires both policymakers and researchers to make such distinctions, and to clarify their employment implications. The authors initially address their theoretical approach to, and conceptualization of, innovation and employment, where the distinction between process and product innovations and between high-tech and low-tech goods and services are central. They go on to address the relationship between innovation and employment, using empirical material to analyse the effects that different kinds of innovations have upon job creation and destruction. Finally, the volume summarizes the findings and addresses conclusions as well as policy implications. This book will be of great interest to those involved in research and policy in the fields of macroeconomics (economic growth and employment), industrial economics and innovation.

Crossing the Thames Estuary Roger Gaspar, 2022-08-01 The Thames Estuary is a complex and challenging area with narrow channels, shoal waters, determined tides and shifting sands, plus busy shipping traffic, three major ports and six wind farms in and around it. But its waters are also fascinating, interesting and have a wide selection of destinations to enjoy. This book describes 60 safe, viable and feasible routes between the Kent, Essex and Suffolk rivers for safe passage and wholly new time-planning tables which are now simplified with significantly additional and readily available information. The third edition retains all the popular features describing and illustrating each sector of each route, with waypoints and 'rolling road' diagrams, providing information and advice about potential or permanent hazards, the implications for the tide and guidance about shipping routes and anchorages. New simplified passage planning tables It includes new and unique passage planning tables which are simple, accurate and quick to use. Readers can select the most appropriate start time and will instantly see predicted arrival time so as to have sufficient time to continue up river to an ultimate destination.

The Study of Nonprofit Enterprise Helmut K. Anheier, Avner Ben-Ner, 2003-07-31 This volume addresses the need to revisit the very economic theories that in the past two decades have contributed so much to the development of a concentrated research agenda on nonprofit organizations. Long neglected as a topic of theorizing and empirical investigation by mainstream economics in particular, these initial theories of nonprofit organizations, introduced by Burton Weisbrod (see Chapter 3 by Kingma and Chapter 4 by Slivinsky) and Henry Hansmann (see Chapter 5 by Ortmann and Schlesinger and Chapter 6 by Hansmann) and others in the late 1970s and early 1980s, continue to shape theoretical and conceptual efforts. Importantly, their influence extends beyond economics and informs sociological and political science approaches to the set of organizations and institutions located between the market firm and the state agency as well (see Chapter 10 by Wolpert, Chapter 11 by Salamon, and Chapter 12 by Wolch; also Anheier & Ben-Ner, 1997; DiMaggio & Anheier, 1990). While the theoretical map of nonprofit research has expanded beyond these early attempts and now includes several other major theories such as stakeholder approaches (Chapter 1 by Ben-Ner and Gui, and Chapter 7 by Krashinsky), supply-side or entrepreneurial theories (Chapter 8 by Badelt and Chapter 9 by Young), institutional theories (Chapter 17 by DiMaggio), and comparative approaches (Chapter 15 by Anheier; see also Salamon & Anheier, 1998), we

nonethelesssuggest that it is time to takestockand reexamine some of the very basics from which these economic theories operate. This is the main purpose ofthe book.
