Googling Security Greg Conti, 2008-10-10 What Does Google Know about You? And Who Are They Telling? When you use Google's "free" services, you pay, big time—with personal information about yourself. Google is making a fortune on what it knows about you...and you may be shocked by just how much Google does know. *Googling Security* is the first book to reveal how Google's vast information stockpiles could be used against you or your business—and what you can do to protect yourself. Unlike other books on Google hacking, this book covers information you disclose when using all of Google's top applications, not just what savvy users can retrieve via Google's search results. West Point computer science professor Greg Conti reveals the privacy implications of Gmail, Google Maps, Google Talk, Google Groups, Google Alerts, Google's new mobile applications, and more. Drawing on his own advanced security research, Conti shows how Google's databases can be used by others with bad intent, even if Google succeeds in its pledge of "don't be evil." Uncover the trail of informational "bread crumbs" you leave when you use Google search How Gmail could be used to track your personal network of friends, family, and acquaintances How Google's map and location tools could disclose the locations of your home, employer, family and friends, travel plans, and intentions How the information stockpiles of Google and other online companies may be spilled, lost, taken, shared, or subpoenaed and later used for identity theft or even blackmail How the Google AdSense and DoubleClick advertising services could track you around the Web How to systematically reduce the personal information you expose or give away This book is a wake-up call and a "how-to" self-defense manual: an indispensable resource for everyone, from private citizens to security professionals, who relies on Google. Your Safety and Privacy Online Siggs Bjarnason, 2019-09-09 The purpose of this book is to provide an average computer user with the knowledge that will help them stay safe while online, as well as help them make privacy choices that work for them. My goal is to explain online threats in terms that don't require a technical background to understand. All techno-speak will be limited, and where it cannot be avoided, I will first be explained in common non-computer terms. This book should be accessible to anyone with enough computer knowledge to use Facebook, Twitter, and other social media, do some online shopping, use google to search for cat videos and pay your bills online, all the important stuff. If you are comfortable doing those things, you are in the core demographic for this book. While this book was written with a US consumer in mind, this book will be equally applicable all over the world. There may be an occasional inside joke that folks outside the USA won't understand, but that shouldn't detract anything from the book. What is different about this book is that I'm targeting non-technical folks and I'm explaining the issues and the threats without resulting to scare tactics or threats which seem so prevalent in today's security training. Something called FUD, Fear Uncertainty and Doubt is very prevalent in today information security space. I'm avoiding all FUD in this book. If I were to summarize this book in a few short bullet points, it would be like this: · Don't be clicking on links or attachments in strange, unexpected emails · Don't share your password, like ever · Do use a password manager for all your password · Do use long, unpredictable, and unique passwords for every site. · Do use critical thinking skills and don't be swayed by emotions.
