Green Building Products Alex Wilson,2008-03-01 Interest in sustainable, green building practices is greater than ever. Whether concerned about allergies, energy costs, old-growth forests, or durability and long-term value, homeowners and builders are looking for ways to ensure that their homes are healthy, safe, beautiful and efficient. In these pages are descriptions and manufacturer contact information for more than 1,400 environmentally preferable products and materials. All phases of residential construction, from sitework to flooring to renewable energy, are covered. Products are grouped by function, and each chapter begins with a discussion of key environmental considerations, and what to look for in a green product. Over 40% revised, this updated edition includes over 120 new products. Categories of products include: Sitework and landscaping Outdoor structures Decking Foundations, footers and slabs Structural systems and components Sheathing Exterior finish and trim Roofing Doors and windows Insulation Flooring and floor coverings Interior finish and trim Caulks and adhesives Paints and coatings Mechanical systems/HVAC Plumbing, electrical and lighting Appliances Furniture and furnishings Renewable energy Distributors and retailers An index of products and manufacturers makes for easy navigation. There is no more comprehensive resource for both the engaged homeowner and those who design and build homes.

Urban Pest Management Partho Dhang,2023-08-31 The management and control of pests in the urban environment in the 21st Century faces many challenges. Pest populations adapt to changing conditions brought about by environmental changes caused by global warming, human population growth, and increased pollution. Urban pests are able to expand their ranges, densities, and habitats, sometimes causing large-scale damage and disease. This book provides collective insights from academic and industry experts on perspectives concerning urban pest management and regulatory innovations arising from the rapid onset of recent environmental challenges. Chapter topics address pest biology, advances in urban pest management practices, emerging urban pest control developments, new technologies, and regulations. The book describes new methods of pest control, their impacts on human health and the environment, and strategies for integrated management limiting the use of chemicals. It provides a practical resource for researchers and policy makers in pest management, urban health, medical entomology and environmental science.

Building Pathology Samuel Y. Harris,2001-03-01 A comprehensive approach to building-related deterioration and intervention This essential technical reference gives building professionals the knowledge and tools they need to better diagnose building-related deterioration, identify sound treatment options and solutions, and design to minimize performance problems on new projects. Combining a clear and accessible explanation of the principles and mechanisms of building deterioration with coverage of a broad array of intervention methods, it is a ready resource for anyone whose work is concerned with improving building performance.

Berkshire Encyclopedia of Sustainability 2/10 Chris Laszlo,Karen Christensen,Daniel S. Fogel,Gernot Wagner,Peter J. Whitehouse,2010-01-01 The Business of Sustainability is a core resource for policy makers, members of the development community, entrepreneurs, and corporate executives, as well as business and economics students and their professors. It contains rich analysis of how sustainability is being factored into industries across the globe, with enlightening case studies of businesses serving as agents of change. Contributing authors provide a groundbreaking body of research-based knowledge. They explain that the concept of

sustainability is being re-framed to be positive about business instead of being tied to the old notion of a trade-off between business and society (that is, if business wins, society and the environment must lose), and they explore how economic development can contribute to building our common future.

Annual Franchise and Distribution Law Developments Jeffrey Brimer, Leslie Smith-Porter, 2005 This book will cut timely research out of your day by putting the latest review and analysis on franchise and distribution law at your fingertips.

Entomology and Pest Management Larry P. Pedigo, Marlin E. Rice, Rayda K. Krell, 2021-03-15 Larry Pedigo and Marlin Rice have produced the top pest management textbook on the market for decades. New co-author Rayda Krell has helped bring the book into the twenty-first century. The successful core concepts of the book—understanding pests in their environment and using an ecological approach to combat them—remain as robust as ever. Features that instructors have come to rely on have been retained, including insect diagnostic boxes with detailed information on important species and species groups and an appendix with keys to major insect orders. New material on genetically modified plant species and regional pest technologies complement concepts in basic and applied entomology. Taxonomies and systematics of insects have been updated throughout the book.

Solutions for a Cleaner, Greener Planet Marc Zimmer, 2019-02-01 Many of the most toxic materials on Earth—from arsenic to plutonium—occur naturally, but manufacturers have also used them in products such as paints, plumbing, pesticides, nuclear fuel, and weaponry. Without careful management, toxins can leach into groundwater or pollute our environment. Exposure to toxins leads to various cancers, impairment of the immune and reproductive systems, as well as cognitive problems. What can be done? Solutions include a wide range of infrastructure approaches, such as better water filtration, governmental and manufacturing regulations, outright bans on certain chemicals, careful monitoring, and the use of alternative fuels. Learn more about key contaminants and their impact on health, as well as solutions on a global and individual level.

Understanding Environmental Pollution Marquita K. Hill, 2010-04-22 The third edition of this well-received textbook delivers a concise overview of global and individual environmental pollution for undergraduate courses, presenting students with the tools to assess environmental issues. With more than thirty percent new material, Hill assesses pollution from an international perspective, including air and water pollution, global warming, energy, solid and hazardous waste, and pollution at home. Both the sources and impacts of pollution are addressed, as well as governmental, corporate, and personal responsibility for pollution, and pollution prevention is emphasized throughout. Non-technical language encourages greater understanding of these often complex issues, and thought-provoking 'Delving Deeper' exercises are included, increasing engagement with the text and enabling students to apply what they have learned. A new chapter on the chemistry basics of pollution links to sections on toxicology and risk assessment, helping students understand concerns over chemicals and their regulation. An essential review of environmental pollution for environmental science students.

Chemistry for Green Environment M. M. Srivastava, 2005 Providing an overview of the current status of chemistry; regarding the implementation of clean, eco-friendly, less improvident manufacturing processes. This book acknowledges a more eco-conscious face of multi-dimensional chemistry: the need, principle, evolution, strategies and bioethical concerns for sustainable development of environment.
