The idea of Instant Korean is simple—learn 100 words and phrases and say 1,000 things. The trick is knowing which 100 words to learn, but the author Boye Demente has solved the problem, choosing only those words you'll hear again and again. Even with a Korean language vocabulary this small, you'll be surprised how quickly you can learn Korean and how fluently you too can communicate in Korean. An English–Korean dictionary makes looking up words and phrases simple and quick. Here's a sample of what you'll be able to do with this Korean phrasebook: Meet people. Go shopping. Ask directions. Ride the subway. Order food and drinks. And much more. About the new edition: This revised edition has manga illustrations to give visual cues for language use in context, and useful cultural notes on what's proper in Korea—how to address someone based on the hierarchy in societal structure (age, gender and how well acquainted with the other party), how to get the attention of a wait staff in a restaurant, etc.

Sustainable Urban Transport in an Asian Context Hitoshi Ieda, 2010-02-18 Systems of transportation long ago developed out of the profound human need to connect and communicate. Transport today is still the only

means for the physical movement of goods and people. Alongside the evolution of transportation and communication technologies, the astounding phenomenon of urbanization has taken place. Cities have grown faster and larger, absorbing vast influxes of dwellers who seek convenient and comfortable lifestyles with the required fast, cheap, and safe systems of transport. Of the world's megacities, with populations of more than ten million, over half are in Asia. While enjoying large-scale economic power, Asian megacities also face serious challenges. They suffer from too-rapid urbanization, with the resulting congestion, pollution, and destruction of traditional local cultures and industries. Written by experts from Asian academic institutes, this book addresses the urgent question of how to achieve sustainability in the still-growing cities of Asia. The chapters comprise the latest research and the application of promising measures, some already realized in Asia, that include urban transport system design and management, land-use control, city planning, and sustainability. Of vast import, this volume was written for students and researchers, planners and engineers, and all who are interested in sustainable urban environments. Following is the structure and rough sketch of the contents of this book: Part I, The First Step: An Overview deals with Asian characteristics from natural, cultural, and economic viewpoints, and then describes how we should grasp the concept of urban sustainability in urban transport in Asia. Readers will understand various aspects of Asia as introductory and preparatory knowledge. Part II, Best Practices from Asia with Wisdom: Keys to Success and Facing Limitations will introduce actual comparatively successful and promising measures tried and realized in Asia. This part covers various cases from passenger transport to freight transport, from transport system design to system management, from engineering measures to people's participation, from traffic control to land-use control and site development. Readers will find an abundance of information and examples in this main part of the book. Part III, Future of Urban Transport in Asia: Rising Asia Proposes to the World discusses key issues and hot topics of study on sustainable city and transport for the future: development and management, travel demand management, growth management, site development strategies, and financial and institutional measures.

Sustainable, Smart and Solidary Seoul Tony Robinson,Minsun Ji,2022-09-30 This book showcases how innovative state policy in Korea transformed Seoul from one of the world's most impoverished, polluted, and congested cities into a global leader in green urban planning, smart city innovations, and social economy initiatives that have dramatically improved the local quality of life. Today, Seoul's urban planning innovations are

increasingly touted as replicable best practices for export to cities across the globe. This book describes how innovative state policy has made Seoul a world leader in sustainable, smart, and solidary urban initiatives. Beginning in the 1960s, Seoul led the fastest urbanization and modernization project in world history, becoming a colossal 26-million-person metropolitan region and one of the largest footprints of humanity on earth, transforming the nation from one of the world's poorest to having the 10th largest GDP in 2020. Today, Seoul has become one of the most productive and innovative urban agglomerations on earth. Seoul's residents enjoy the world's highest penetration of high-speed internet, a model mass transit system, and advanced smart-city technologies. The vast city has become increasingly green and sustainable, while also recycling about 90% of all waste. Seoul has become a leader in social economy innovations like cooperative villages, mutual benefit societies, and social investment funds that advance equitable development goals amid a booming capitalist economy. To broaden our imagination of what good urbanism can achieve, this book reviews Seoul's recent innovations in smart, sustainable, and solidary urbanism, including: green urban planning, sustainable development through recycling and reuse, well-managed mass transit, smart city design, and solidarity economy initiatives.

Eco-Cities and Green Transport Huapu Lu,2020-04-11 Eco-cities and Green Transport presents a systematic, uniform, and structured way to examine different cities at different scales in order to suggest unique solutions appropriate to each scale. The book examines city infrastructure and the built environment, transport system supply and demand, and transport behavior to offer innovative policy solutions for various transport modes. With end of chapter experiences and lessons summarized, the book provides an in-depth analysis of the advantages and disadvantages for transforming cities and their transport systems to meet residents current and future needs. The increasingly rapid growth of global urbanization requires cities to be built in an ecologically sustainable, energy efficient, and livable way. A critical component in achieving these goals is an urban transportation system that uses natural resources as reasonably as possible. The outcome of a ten-year data collection research effort by the author and his team, the book sheds new insights into these challenges using a thorough investigation of traffic systems in 20 cities from 13 countries throughout Asia, Europe, and the United States. Summarizes the essential experiences of green transport projects from cities around the world Analyzes projects using a consistent structure, allowing comparison of best practices and policy approaches Overviews the latest sustainable urban transportation concepts, tools, and best practices

Reforming Urban Transport in India M Ramachandran,2017-07-07 Reforming Urban Transport in India is an attempt to take stock of the various issues our cities and towns are facing in the area of urban transport, efforts made and being made both at the policy level as well as the field level to address the problems, the ever increasing complexities of challenges in the area of urban mobility and some of the laudable initiatives on the ground to handle the problems. This book would be a valuable addition to the limited literature available on the subject of urban transport in India. The topic has not attained much prominence even in the broader discussions on the transport sector issues in the country. The fact that we address our urban transport issues in a casual manner but there is need to take them up in a focused and purposeful manner and this can no longer be delayed is probably the one loud message which is emerging out of this volume. The wealth of knowledge of the contributors, each one of them having huge experience behind them in this sector, makes the book a valuable addition to the literature and a helpful guide in policy discussions.

Megacities Andre Sorensen,Junichiro Okata,2010-11-18 For the first time in human history, more than half the world's population is urban. A fundamental aspect of this transformation has been the emergence of giant cities, or megacities, that present major new challenges. This book examines how issues of megacity development, urban form, sustainability, and unsustainability are conceived, how governance processes are influenced by these ideas, and how these processes have in turn influenced outcomes on the ground, in some cases in transformative ways. Through 15 in-depth case studies by prominent researchers from around the world, this book examines the major challenges facing megacities today. The studies are organized around a shared set of concerns and questions about issues of sustainability, land development, urban governance, and urban form. Some of the main questions addressed are: What are the most pressing issues of sustainability and urban form in each megacity? How are major issues of sustainability understood and framed by policymakers? Is urban form considered a significant component of sustainability issues in public debates and public policy? Who are the key actors framing urban sustainability challenges and shaping urban change? How is unsustainability, risk, or disaster imagined, and how are those concerns reflected in policy approaches? What has been achieved so far, and what challenges remain? The publication of this book is a step toward answering these and other crucial questions.
