Sorting Things Out Geoffrey C. Bowker,Susan Leigh Star,2000-08-25 A revealing and surprising look at how classification systems can shape both worldviews and social interactions. What do a seventeenth-century mortality table (whose causes of death include fainted in a bath, frightened, and itch); the identification of South Africans during apartheid as European, Asian, colored, or black; and the separation of machine- from hand-washables have in common? All are examples of classification—the scaffolding of information infrastructures. In *Sorting Things Out*, Geoffrey C. Bowker and Susan Leigh Star explore the role of categories and standards in shaping the modern world. In a clear and lively style, they investigate a variety of classification systems, including the International Classification of Diseases, the Nursing Interventions Classification, race classification under apartheid in South Africa, and the classification of viruses and of tuberculosis. The authors emphasize the role of invisibility in the process by which classification orders human interaction. They examine how categories are made and kept invisible, and how people can change this invisibility when necessary. They also explore systems of classification as part of the built information environment. Much as an urban historian would review highway permits and zoning decisions to tell a city's story, the authors review archives of classification design to understand how decisions have been made. *Sorting Things Out* has a moral agenda, for each standard and category valorizes some point of view and silences another. Standards and classifications produce advantage or suffering. Jobs are made and lost; some regions benefit at the expense of others. How these choices are made and how we think about that process are at the moral and political core of this work. The book is an important empirical source for understanding the building of information infrastructures.

Philosophy of Complex Systems ,2011-05-23 The domain of nonlinear dynamical systems and its mathematical underpinnings has been developing exponentially for a

century, the last 35 years seeing an outpouring of new ideas and applications and a concomitant confluence with ideas of complex systems and their applications from irreversible thermodynamics. A few examples are in meteorology, ecological dynamics, and social and economic dynamics. These new ideas have profound implications for our understanding and practice in domains involving complexity, predictability and determinism, equilibrium, control, planning, individuality, responsibility and so on. Our intention is to draw together in this volume, we believe for the first time, a comprehensive picture of the manifold philosophically interesting impacts of recent developments in understanding nonlinear systems and the unique aspects of their complexity. The book will focus specifically on the philosophical concepts, principles, judgments and problems distinctly raised by work in the domain of complex nonlinear dynamical systems, especially in recent years. -Comprehensive coverage of all main theories in the philosophy of Complex Systems -Clearly written expositions of fundamental ideas and concepts -Definitive discussions by leading researchers in the field -Summaries of leading-edge research in related fields are also included

Handbook of Social Skills and Autism Spectrum Disorder Justin B. Leaf,2017-10-17 This handbook identifies the various social deficiencies widely associated with children and youth diagnosed with autism spectrum disorder (ASD). It discusses possible causes as well as the lifelong effects if these deficiencies are not addressed. The handbook presents current behavioral and curriculum-based methods for assessing social deficits. Chapters examine the various interventions that have been used to improve social skills and behavior, including video modeling, peer-mediated interventions, and script fading. Chapters also assess various interventions using empirically based procedures, evaluate the research of each of these procedures, provide guidelines for treatment planning, and offer clinical recommendations. The handbook concludes with future directions for the development of both social behavior and clinical social skills interventions. Topics featured in the Handbook include: Impairments in social behavior that may result in negative outcomes such as depression, loneliness, and suicide in individuals with ASD. Bullying among youth with ASD. Behavioral skills training to promote social behavior of individuals with ASD. The Early Start Denver Model approach to helping young children with ASD. The implementation of social skills groups for individuals diagnosed with ASD. The Handbook of Social Skills and Autism Spectrum Disorder is a must-have resource for researchers, clinicians/professionals, and graduate students in clinical child, school, and developmental psychology, behavioral therapy, and social work, as well as such interrelated disciplines as child and adolescent psychiatry, rehabilitation medicine/therapy, pediatrics, and special education/educational psychology.
