We have produced this guide not just because we and so many other people love sharks. It is also because their identification, whether of living animals, fishery catches or body parts sold at markets, is an essential tool to support shark conservation, fisheries management and international trade regulation, prevent further depletion of stocks, and enable their recovery. □ the first pocket guide to all 501 shark species □ all species illustrated and described □ handy, compact format with concise text □ a six-page guide to shark teeth identification □ an eight-page guide to the identification of the shark fins most commonly encountered in the fin trade Colour plates are by Marc Dando from the hugely acclaimed *Sharks of the World: A Fully Illustrated Guide*.

Emperors of the Deep William McKeever, 2019-06-25 In this remarkable groundbreaking book, a documentarian and conservationist, determined to dispel misplaced fear and correct common misconceptions, explores in-depth the secret lives of sharks—magnificent creatures who play an integral part in maintaining the health of the world's oceans and ultimately the planet. From the *Jaws* blockbusters to Shark Week, we are conditioned to see sharks as terrifying cold-blooded underwater predators. But as Ocean Guardian founder William McKeever reveals, sharks are evolutionary marvels essential to maintaining a balanced ecosystem. We can learn much from sharks, he argues, and our knowledge about them continues to grow. The first book to reveal in full the hidden lives of sharks, *Emperors of the Deep* examines four species—Mako, Tiger, Hammerhead, and Great White—as never before, and includes fascinating details such as: Sharks are 50-million years older than trees; Sharks have survived five extinction level events, including the one that killed off the dinosaurs; Sharks have electroreception, a sixth-sense that lets them pick up on electric fields generated by living things; Sharks can dive 4,000 feet below the surface; Sharks account for only 6 human fatalities per year, while humans kill 100 million sharks per year. McKeever goes back through time to probe the shark's pre-historic secrets and how it has become the world's most feared and most misunderstood predator, and takes us on a pulse-pounding tour around the world and deep under the water's surface, from the frigid waters of the Arctic Circle to the coral reefs of the tropical Central Pacific, to see sharks up close in their natural habitat. He also interviews ecologists, conservationists, and world-renowned shark experts, including the founders of Greenpeace's Rainbow Warrior, the head of the Massachusetts Shark Research Program, and the self-professed “last great shark hunter.” At once a deep-dive into the misunderstood world of sharks and an urgent call to protect them, *Emperors of the Deep* celebrates this wild species that hold the key to unlocking the mysteries of the ocean—if we can prevent their extinction from climate change and human hunters.

The authors cover classification, common names, morphology, size, reproduction, diet, habitat, distribution, behavior, status and references to source materials for 50 species. Illustrations include dozens of rare photos and detailed author drawings.

Sharks and Other Fish Andrew Solway, 2007 Sharks are among the most ferocious predators in the oceans, but how have they, and other fish, adapted to become so successful? The series explores how some of our favorite animals are uniquely adapted to their environment. Each book looks at the various ways in which different species have adapted to their surroundings and covers habitat, defenses, camouflage, and the way animals find food.

The Sharks of North American Waters Jose I. Castro, 1983 For many years, brief encounters between sharks and humans could leave the latter with a vivid memory of the much-maligned fish but no convenient means of identifying it more specifically. With the publication of *The Sharks of North American Waters* in 1983, everyone from the experienced ichthyologist to the weekend angler had access to concise descriptions and accurate, detailed drawings in this handy field guide to more than one hundred species.

They predate the dinosaurs and have ruled the seas for 400 million years. *Shark* presents the facts and explores the fallacies about these nearly perfectly adapted fish, from their prehistoric beginning to their struggle for survival today. The book covers: Their origins and ancestors Diversity of the species Shark behavior and physiology Research projects Face-to-face encounters Conservation efforts. A detailed chapter on shark attacks explains where, when and why attacks occur. The book also describes the different types of attacks -- hit-and-run, bump-and-bite and sneak attacks -- and provides useful tips for not becoming a statistic. Engagingly written and illustrated with stunning photographs, *Shark* combines the latest scientific findings and celebrates the mystery and diversity of a remarkable species.
