Ann M. Pendleton-Jullian, John Seely Brown

The Technological Revolution in Financial Services Michael R. King, Richard W. Nesbitt, 2020-08-26 The financial services industry is being transformed by heightened regulation, technological disruption, and changing demographics. These structural forces have lowered barriers to entry, increasing competition from within and outside the industry, in the form of entrepreneurial fintech start-ups to large, non-financial technology-based companies. The Technological Revolution in Financial Services is an invaluable resource for those eager to understand the evolving financial industry. This edited volume outlines the strategic implications for financial services firms in North America, Europe, and other advanced economies. The most successful banks, insurance companies, and asset managers will partner with financial technology companies to provide a better and more innovative experience services to retail customers and small businesses. Ultimately this technological revolution will benefit customers and lead to a more open and inclusive financial system.

Design Unbound: Designing for Emergence in a White Water World, Volume 1 Ann M. Pendleton-Jullian, John Seely Brown, 2018-12-04 Tools for navigating today's hyper-connected, rapidly changing, and radically contingent white water world. Design Unbound presents a new tool set for having agency in the twenty-first century, in what the authors characterize as a white water world—rapidly changing, hyperconnected, and radically contingent. These are the tools of a new kind of practice that is the offspring of complexity science, which gives us a new lens through which to view the world as entangled and emerging, and architecture, which is about designing contexts. In such a practice, design, unbound from its material thingness, is set free to design contexts as complex systems. In a world where causality is systemic, entangled, in flux, and often elusive, we cannot design for absolute outcomes. Instead, we need to design for emergence. Design Unbound not only makes this case through theory but also presents a set of tools to do so. With case studies that range from a new kind of university to organizational, and even societal, transformation, Design Unbound draws from a vast array of domains: architecture, science and technology, philosophy, cinema, music, literature and poetry, even the military. It is presented in five books, bound as two volumes. Different books within the larger system of books will resonate with different reading audiences, from architects to people reconceiving higher education to the public policy or defense and intelligence communities. The authors provide different entry points allowing readers to navigate their own pathways through the system of books.
