Life Is Simple Johnjoe McFadden,2021-09-28 In short, Life Is Simple is enthralling.--Michael Blastland, Prospect A biologist argues that simplicity is the guiding principle of the universe Centuries ago, the principle of Ockham's razor changed our world by showing simpler answers to be preferable and more often true. In Life Is Simple, scientist Johnjoe McFadden traces centuries of discoveries, taking us from a geocentric cosmos to quantum mechanics and DNA, arguing that simplicity has revealed profound answers to the greatest mysteries. This is no coincidence. From the laws that keep a ball in motion to those that govern evolution, simplicity, he claims, has shaped the universe itself. And in McFadden's view, life could only have emerged by embracing maximal simplicity, making the fundamental law of the universe a cosmic form of natural selection that favors survival of the simplest. Recasting both the history of science and our universe's origins, McFadden transforms our understanding of ourselves and our world.

The Physical Nature of Consciousness Philip R. Van Loocke,2001-01-01 The Physical Nature of Consciousness contains twelve chapters that discuss recent and new perspectives on the relation between modern physics and consciousness. Stuart Hameroff opens with an extended and updated exposition of the Penrose/Hameroff Orch-OR model, and subsequently addresses recent criticisms of quantum approaches to the brain. Evan Walker presents his view on consciousness from the perspective of a new approach to the integration of quantum theory and relativity. Friedrich Beck elaborates on the Beck/Eccles quantum approach to consciousness. Karl Pribram puts the holographic view on consciousness in perspective of his life long work. Peter Marcer and Edgar Mitchell explain the relevance of quantum holography for consciousness. Gordon Globus discusses the relation between postmodern philosophical theories and quantum consciousness. Chris Clarke develops a theory in terms of a specific type of formal logic to reconcile the phenomenology of consciousness with the physical world. Ilya Prigogine summarizes his view on complexity, and on the future of quantum theory, which goes beyond the present formalism, and goes on to comment on the problem of consciousness. Matti Pitkanen identifies the place for consciousness in a unifying topological geometro-dynamics theory. Colin McGinn argues against classical materialism. Dick Bierman gives an overview of anomalous phenomena. He identifies a decline effect, and discusses different possible interpretations. Philip Van Loocke closes the volume with a discussion on how deep teleology in cellular systems may relate to consciousness. (Series A)

The Great Globe and All Who It Inherit David Kellogg,2014-11-04 Every storyteller soon discovers the difference between putting a story inside children and trying to extract it with comprehension questions and putting children inside a story and having them act it out. Teachers may experience this as a difference in “difficulty”, or in the level of motivation and enthusiasm, or even in the engagement of creativity and imagination, and leave it at that. This book explores the divide more critically and analytically, finding symmetrical and even complementary problems and affordances with both approaches. First, we examine what teachers actually say and do in each approach, using the systemic-functional grammar of M.A.K. Halliday. Secondly, we explore the differences developmentally, using the cultural-historical psychology of L.S. Vygotsky. Thirdly, we explain the differences we find in texts by considering the history of genres from the fable through the plays of Shakespeare. “Inside” and “Outside” the story turn out to be two very different modes of experiencing—the one reflective and narrativizing and the other participatory and dialogic. These two modes of experience prove to be equally valuable, and even mutually necessary, but only in the long run—different approaches are necessary at different moments in the lesson, different points in development, and even different times in human history. In the final analysis, though, this distinction is meaningless to children and to their teachers unless it is of practical use. Each chapter employs only the most advanced technology ever developed for making sense of human experience, namely thinking and talking--though not necessarily in that order. So every story has a specific narrative to tell, a concrete set of dialogues to try, and above all a practicable time and a practical space for children, their teachers, and even their teachers’ teachers, to talk and to think.
