Greenberg,2017-11-29 This book provides the "how to's" of police patrol, focusing on how officers on the front line perform their duties (covering both skills and techniques), meet day-to-day challenges, and manage the tasks and risks associated with modern police patrol. Drawing on theory, research, and the experience of numerous practitioners, it provides practical daily checklists and guidance for delivering primary police services: • Conducting mobile and foot patrols • Completing a preliminary investigation • Canvassing a neighborhood • Developing street contacts • Building and sustaining trust • Delivering death notifications, and more. It features interviews with frontline officers, as well as both police chiefs and supervisors to examine the role of police officers in the 21st century and their partnership with, and accountability to, the communities they serve. In addition, this book explores how modern policing has evolved by examining the research, innovation, tradition, and technology upon which it is based. It provides new perspectives and ideas as well as basic knowledge of daily practices, offering value to new and experienced police and security personnel alike; students in criminal justice, law and public safety; community leaders; and others involved in advancing police operations and community well-being.

The Teenage Brain Frances E. Jensen,Amy Ellis Nutt,2015-01-06 A New York Times Bestseller Renowned neurologist Dr. Frances E. Jensen offers a revolutionary look at the brains of teenagers, dispelling myths and offering practical advice for teens, parents and teachers. Dr. Frances E. Jensen is chair of the department of neurology in the Perelman School of Medicine at the University of Pennsylvania. As a mother, teacher, researcher, clinician, and frequent lecturer to parents and teens, she is in a unique position to explain to readers the workings of the teen brain. In The Teenage Brain, Dr. Jensen brings to readers the astonishing findings that previously remained buried in academic journals. The root myth scientists believed for years was that the adolescent brain was essentially an adult one, only with fewer miles on it. Over the last decade, however, the scientific community has learned that the teen years encompass vitally important stages of brain development. Samples of some of the most recent findings include: Teens are better learners than adults because their brain cells more readily build memories. But this heightened adaptability can be hijacked by addiction, and the adolescent brain can become addicted more strongly and for a longer duration than the adult brain. Studies show that girls' brains are a full two years more mature than boys' brains in the mid-teens, possibly explaining differences seen in the classroom and in social behavior. Adolescents may not be as resilient to the effects of drugs as we thought. Recent experimental and human studies show that the occasional use of marijuana, for instance, can cause lingering memory problems even days after smoking, and that long-term use of pot impacts later adulthood IQ. Multi-tasking causes divided attention and has been shown to reduce learning ability in the teenage brain. Multi-tasking also has some addictive qualities, which may result in habitual short attention in teenagers. Emotionally stressful situations may impact the adolescent more than it would affect the adult: stress can have permanent effects on mental health and can lead to higher risk of developing neuropsychiatric disorders such as depression. Dr. Jensen gathers what we've discovered about adolescent brain function, wiring, and capacity and explains the science in the contexts of everyday learning and multitasking, stress and memory, sleep, addiction, and decision-making. In this groundbreaking yet accessible book, these findings also yield practical suggestions that will help adults and teenagers negotiate the mysterious world of adolescent development.

Current empirical and methodological developments are described. Critiques of the duality approach are explored and important questions for future research identified.

Secrecy in Japanese Arts: "Secret Transmission" as a Mode of Knowledge M. Morinaga, 2005-05-05 Exploring the Japanese tradition of hidden (or the secret transmission of) knowledge within a closed and often hereditary group, the author investigates how esoteric practices function, how people make meaning of their practices, and how this form of esotericism survived into the modern age. These questions are examined through the use of esoteric texts from the 15th to 18th centuries and theatrical treatises from the late 19th century onwards.

Eastern Body, Western Mind Anodea Judith, 2011-03-16 Revised edition of the groundbreaking New Age book that seamlessly merges Western psychology and science with spirituality, creating a compelling interpretation of the Eastern chakra system and its relevance for Westerners today. In Eastern Body, Western Mind, chakra authority Anodea Judith brought a fresh approach to the yoga-based Eastern chakra system, adapting it to the Western framework of Jungian psychology, somatic therapy, childhood developmental theory, and metaphysics and applying the chakra system to important modern social realities and issues such as addiction, codependence, family dynamics, sexuality, and personal empowerment. Arranged schematically, the book uses the inherent structure of the chakra system as a map upon which to chart our Western understanding of individual development. Each chapter focuses on a single chakra, starting with a description of its characteristics and then exploring its particular childhood developmental patterns, traumas and abuses, and how to heal and maintain balance.

Inventing Ourselves Sarah-Jayne Blakemore, 2018-05-15 A tour through the groundbreaking science behind the enigmatic, but crucial, brain developments of adolescence and how those translate into teenage behavior The brain creates every feeling, emotion, and desire we experience, and stores every one of our memories. And yet, until very recently, scientists believed our brains were fully developed from childhood on. Now, thanks to imaging technology that enables us to look inside the living human brain at all ages, we know that this isn't so. Professor Sarah-Jayne Blakemore, one of the world's leading researchers into adolescent neurology, explains precisely what is going on in the complex and fascinating brains of teenagers--namely that the brain goes on developing and changing right through adolescence--with profound implications for the adults these young people will become. Drawing from cutting-edge research, including her own, Blakemore shows: How an adolescent brain differs from those of children and adults Why problem-free kids can turn into challenging teens What drives the excessive risk-taking and all-consuming relationships common among teenagers And why many mental illnesses--depression, addiction, schizophrenia--present during these formative years Blakemore's discoveries have transformed our understanding of the teenage mind, with consequences for law, education policy and practice, and, most of all, parents.

ACROSS BORDERS AND TIME: JONATHAN SWIFT Csaba Maczelka, David Clare, Andrew C. Rouse, Gabriella Hartvig, 2022-12-16 The volume Across Borders and Time: Jonathan Swift contains the papers delivered at the conference The World of Swift; Swift and his World, which was dedicated to the 350th anniversary of the birth of Jonathan Swift. The conference was held on 24-25 November 2017, at the House of Arts and Literature, Pécs, and jointly organised by the Institute of English Studies of Pécs University and SPECHEL, the latter of which is also the publisher of this volume in its series, SPECHEL e-ditions. It also benefited from the support provided by the Irish Embassy in Budapest. That year also marked the 650th anniversary of Hungary's first university, founded in Pécs in 1367, and so the conference honoured that event, too. In this, the fifth SPECHEL e-dition, series editor Rouse joins up once again with SPECHEL member Gabriella Hartvig, an internationally respected scholar of the period and colleague at Pécs University, together with Irish Swiftian scholar David Clare. The volume comprises a selection of essays

emanating from papers delivered at the conference celebrating the 350th anniversary of the Anglo-Irish writer Jonathan Swift, held in the anniversary year of 2017, and includes a paper delivered by the Irish Ambassador to Hungary that opened the conference. We are grateful to the Irish Embassy for their financial support, as well as to a number of local businesses and the Mayor's Office of Pécs. The conference was organised by SPECHEL as part of the British and Irish Autumn 2017 series of events, and included a recital of the music of the Irish harper Turlough O'Carolan (1670-1738).
