**Screening for Skin Cancer** Mark Helfand, Susan Mahon, Karen B. Eden, Oregon Health Sciences University. Evidence-based Practice Center, 2001-05 CONTEXT: Malignant melanoma is often lethal, and its incidence in the United States has increased rapidly over the past 2 decades. Nonmelanoma skin

cancer is seldom lethal, but, if advanced, can cause severe disfigurement and morbidity. Early detection and treatment of melanoma might reduce mortality, whereas early detection and treatment of nonmelanoma skin cancer might prevent major disfigurement and, to a lesser extent, prevent mortality. Current recommendations from professional societies regarding screening for skin cancer vary. **OBJECTIVE:** To examine published data on the effectiveness of screening for skin cancer by a primary care provider. **DATA SOURCES:** We searched the MEDLINE database for papers published from January 1994 to June 1999, using search terms for screening, physical examination, morbidity, and skin neoplasms. For information on accuracy of screening tests, we used the search terms sensitivity and specificity. We identified the most important studies from before 1994 from the Guide to Clinical Preventive Services, second edition, and from high-quality reviews. We used reference lists and expert recommendations to locate additional articles. **STUDY SELECTION:** Two reviewers independently reviewed a subset of 500 abstracts. After consistency was established, 1 reviewer reviewed the remaining abstracts. We included studies if they contained data on yield of screening, screening tests, risk factors, risk assessment, effectiveness of early detection, or cost effectiveness. **DATA EXTRACTION:** We abstracted the following descriptive information from full-text published studies of screening and recorded it in an electronic database: type of screening study, study design, setting, population, patient recruitment, screening test description, examiner, advertising targeted at high-risk groups or not targeted, reported risk factors of participants, and procedure for referrals. We also abstracted the yield-of-screening data, including probabilities and numbers of referrals, types of suspected skin cancers, biopsies, confirmed skin cancers, stages, and thickness of skin cancers. For studies that reported test performance, we recorded the definition of a suspicious lesion; the gold standard determination of disease; and

the number of true-positive, false-positive, true-negative, and false-negative test results. When possible, we recorded positive predictive values, likelihood ratios, sensitivity, and specificity. DATA SYNTHESIS: No randomized or case-control studies demonstrate that screening for melanoma reduces morbidity or mortality. Basal cell carcinoma and squamous cell carcinoma are common, but detection and treatment in the absence of formal screening is almost always curative. No controlled studies have shown that formal screening programs improve this already high cure rate. Although the efficacy of screening has not been established, the screening procedures themselves are noninvasive, and the follow-up test--skin biopsy--has low morbidity. Estimates of accuracy of screening are based on cross-sectional studies that suffer from workup bias. One prospective study tracked patients who had negative results to determine the number of patients who had false-negative results. In this study, the sensitivity of screening for skin cancer was 0.94 and specificity was 0.975. Several recent case-control studies confirm earlier evidence that patients who have atypical moles, many (>50) common moles, or both are at increased risk for melanoma. One well-done prospective study demonstrated that risk assessment by limited physical examination identified a relatively small (

### **Cutaneous Melanoma** Paweł Pietkiewicz, 2020-05-27

According to the American Cancer Society, skin cancer is the most common cancer of all cancer types. Although melanoma represents only about 1% of all skin cancers, this tumour is still responsible for most skin cancer deaths and its incidence is steadily on the rise. The first section of this book covers the topic of genetic and epigenetic regulation of the melanoma progression. The second section focuses on special melanoma scenarios: melanoma in pregnancy and subungual melanoma. The third section follows the emerging trend of implementing mathematic models in skin cancer diagnosis. I hope that this

book, written by international experts, will be a useful resource for both clinicians and researchers in the field.

The Patient Will See You Now Eric Topol, 2016-10-25 The essential guide by one of America's leading doctors to how digital technology enables all of us to take charge of our health A trip to the doctor is almost a guarantee of misery. You'll make an appointment months in advance. You'll probably wait for several hours until you hear the doctor will see you now-but only for fifteen minutes! Then you'll wait even longer for lab tests, the

results of which you'll likely never see, unless they indicate further (and more invasive) tests, most of which will probably prove unnecessary (much like physicals themselves). And your bill will be astronomical. In *The Patient Will See You Now*, Eric Topol, one of the nation's top physicians, shows why medicine does not have to be that way. Instead, you could use your smartphone to get rapid test results from one drop of blood, monitor your vital signs both day and night, and use an artificially intelligent algorithm to receive a diagnosis without having to see a doctor, all at a small fraction of the cost imposed by our modern healthcare system. The change is powered by what Topol calls medicine's Gutenberg moment. Much as the printing press took learning out of the hands of a priestly class, the mobile internet is doing the same for medicine, giving us unprecedented control over our healthcare. With smartphones in hand, we are no longer beholden to an impersonal and paternalistic system in which doctor knows best. Medicine has been digitized, Topol argues; now it will be democratized. Computers will replace physicians for many diagnostic tasks, citizen science will give rise to citizen medicine, and enormous data sets will give us new means to attack conditions that have long been incurable. Massive, open, online medicine, where diagnostics are done by Facebook-like comparisons of medical profiles, will enable real-time, real-world research on massive populations. There's no doubt the path forward will be complicated: the medical establishment will resist these changes, and digitized medicine inevitably raises serious issues surrounding privacy. Nevertheless, the result-better, cheaper, and more human health care-will be worth it. Provocative and engrossing, *The Patient Will See You Now* is essential reading for anyone who thinks they deserve better health care. That is, for all of us.

**Let's Talk Lymphoedema** Peter Mortimer, Gemma Levine, 2017-05-25 Lymphoedema results from a failure of the lymphatic system, causing swelling and fluid retention; it can also cause aching, heaviness and difficulty moving. Research shows that around 140 million people worldwide may be living with lymphoedema, and it affects approximately one in five women after breast cancer treatment. There is no cure for the disease, but there are ways to control the symptoms. *Let's Talk Lymphoedema* has been written to help sufferers deal with its debilitating effects, providing information and inspiration to help them lead rich, vibrant lives. It features contributions from international experts and personalities such as Miriam Stoppard, and the actress Kathy Bates, who herself suffers from the condition.
