They have pointed the way, helped us tell time, and best of all, told us stories. Now, curious kids can explore the night sky with *Stories in the Sky: Constellations*. From Ursa Major and Ursa Minor, Leo the Lion, Orion the Hunter, and more, ten of the most popular and easiest-to-find constellations in the night sky are featured with beautiful illustrations that show the stars in the constellation as well as a cute rendering of the animal or person it represents. The book is organized alphabetically by constellation. Profiles of each constellation include basic information such as size, visibility, and number of stars, as well as information on the discovery and naming of the constellation and associated lore. Beyond details about the constellation itself is information about every astronomical event that took place or discovery made in the vicinity of the constellation. In the constellation of Cygnus (the Swan) we encounter the location of the first confirmed black hole. A stop at Gemini (the Twins) is a chance to say hello to the dwarf planet Pluto, and in Orion (the hunter) we find the location of the first identified gamma-ray burst. Stunning star maps throughout the book by acclaimed star mapmaker Wil Tirion show us the exact location of every constellation, the details of its structure, as well as its surrounding astronomical neighbors.

Containing star charts, a guide to the constellations, and details about seasons and the movement of the objects we see in the sky, this classic book makes H. A. Rey’s passion for astronomy evident on every page. New updates concentrate on the planetary and solar system information in the latter part of the book. Facts and figures for each planet have been revised, and new scientific information has been added, such as Pluto’s reclassification as a dwarf planet. There's also a brand-new online resource that allows readers to track the positions of the planets in the night sky till the year 2100. “An excellent introduction to the heavens, to satisfy and stimulate a child’s interest...a very useful book.”—Kirkus Reviews “Persuades the reader that astronomy is not only easy—it’s fun.”—The New York Times “Excellent.”—Saturday Review

Star Stories Anthony Aveni, 2019-10-22 “Skillfully guides us around the awesome night sky through the imagination of different peoples around the world, past and present. A wonderful treasury.” —Jacqueline Mitton, author of *Zoo in the Sky* Most of us can recall searching the clouds as children for recognizable shapes and pictures. Similarly, since the dawn of humankind, the night sky has been filled with countless points of light that beckon gazers to connect the dots. We can see love, betrayal, and friendship in the heavens, if we know where to look. A world expert on cultural understandings of cosmology, Anthony Aveni provides an unconventional atlas of the night sky, introducing tales beloved for generations. The constellations included are not only your typical Greek and Roman myths, but star patterns conceived by a host of cultures, non-Western and indigenous, ancient and contemporary. Follow an epic animal race, a quest for a disembodied hand, and an emu egg hunt in these constellation stories from diverse cultures. The sky has long served as a

template for telling stories about the meaning of life. People have looked for likenesses between the domains of heaven and earth to help marry the unfamiliar above to the quotidian below. Perfect for all sky watchers and storytellers, this book is an essential complement to Western mythologies, showing how the confluence of the natural world and culture of heavenly observers can produce a variety of tales about the shapes in the sky. Praise for Anthony Aveni "A pioneering cultural astronomer." —Publishers Weekly "He writes with a mastery and polish that is wonderfully accessible, akin to an engaging classroom lecture." —The New York Times Book Review

Uncharted Constellations John C. Barentine, 2016-04-04 This book compiles an array of interesting constellations that fell by the wayside before the IAU established the modern canon of constellations. That decision left out lesser known ones whose history is nevertheless interesting, but at last author John Barentine is giving them their due. This book is a companion to *The Lost Constellations*, highlighting the more obscure configurations. The 16 constellations found in this volume fall into one or more of three broad categories: asterisms, such as the Big Dipper in Ursa Major; single-sourced constellations introduced on surviving charts by a cartographer perhaps currying the favor of sponsors; and re-brands, new figures meant to displace existing constellations, often for an ideological reason. All of them reveal something unique about the development of humanity's map of the sky.
