Combustion 2e Irvin Glassman,2012-12-02 Combustion, Second Edition focuses on the underlying principles of combustion and covers topics ranging from chemical thermodynamics and flame temperatures to chemical kinetics, detonation, ignition, and oxidation characteristics of fuels. Diffusion flames, flame phenomena in premixed combustible gases, and combustion of nonvolatile fuels are also discussed. This book consists of nine chapters and begins by introducing the reader to heats of reaction and formation, free energy and the equilibrium constants, and flame temperature calculations. The next chapter explores the rates of reactions and their temperature dependency; simultaneous interdependent and chain reactions; pseudo-first-order reactions; the partial equilibrium assumption; and pressure effect in fractional conversion. The chain branching reactions and criteria for explosion explosion are then considered, along with the limits and oxidation characteristics of fuels such as hydrogen, carbon monoxide, and hydrocarbons. The remaining chapters look at the laminar flame speed and stability limits of laminar flames; deflagration and detonation; burning in convective atmospheres; and the theory of thermal ignition. The final chapter is devoted to the burning of nonvolatile fuels such as coal. This monograph will be a valuable resource for students and teachers of physics.

Health Inequities in Conflict-affected Areas Samrat Sinha,Jennifer Liang,2021-04-20 This book provides an insight into the issue of health inequity brought about by the violent conflict in Northeast India. While examining the deep vulnerabilities and loss of well-being suffered by families displaced by conflict in the Indo-Bhutan borderland region, the authors raise fundamental questions of accountability and the role of various stakeholders in providing humanitarian assistance to those affected by the conflict. It highlights for the reader the role played by conflict and armed violence in dismantling a functioning public health system and delineates the long-term barriers to post-conflict recovery. The book is written by those who have worked in implementing development and peacebuilding programs in the Bodoland Territorial Region (BTR) of Western Assam. The book especially brings to the fore the voices of those communities directly affected by conflict in Bodoland. The book is valuable to researchers, development practioners and policy makers. Given the unique format of the book, which includes a number of case studies, it is particularly useful for students of development, public health and allied disciplines such as international relations as well as peace and conflict studies.
