Birding at the Bridge Heather Wolf,2016-06-14 Bright lights, big city, and . . . birds? The Brooklyn Bridge once overshadowed a decaying industrial waterfront, but today it points the way to a new green oasis: Brooklyn Bridge Park. When avid birder Heather Wolf moved from tropical Florida to a nearby apartment, she wondered how many species she might see there, and soon came to a surprising realization: Not only is the park filled with an astonishing variety of birds, but the challenges that come with urban birding make them even more fun—and rewarding—to find. Camera in hand, Heather has captured scores of memorable scenes—a European starling pokes its head out of a hole in a snack shop, a marsh wren straddles two branches, common grackle nestlings clamor for food above the basketball courts—in more than 150 stunning photographs that will entrance birders and bird lovers, wherever their local patch may be. From the familiar-but-striking bufflehead duck to the elusive mourning warbler, every species comes to life on the page, foraging, nesting, and soaring in the slice of the city where they’ve made themselves at home. Discover the thrilling adventure of birding in the great outdoors—in the heart of Brooklyn.

A Most Remarkable Creature Jonathan Meiburg,2022-02-22 An enthralling account of a modern voyage of discovery as we meet the clever, social birds of prey called caracaras, which puzzled Darwin, fascinate modern-day falconers, and carry secrets of our planet's deep past in their family history. “Deftly intertwine[s] natural history and human history, with insights and lessons that go far

beyond the subject birds.”—David Sibley, author of *What It's Like to Be a Bird* “Utterly captivating and beautifully written, this book is a hugely entertaining and enlightening exploration of a bird so wickedly smart, curious, and social, it boggles the mind.”—Jennifer Ackerman, author of *The Bird Way* In 1833, Charles Darwin was astonished by an animal he met in the Falkland Islands: handsome, social, and oddly crow-like falcons that were tame and inquisitive . . . quarrelsome and passionate, and so insatiably curious that they stole hats, compasses, and other valuables from the crew of the *Beagle*. Darwin wondered why these birds were confined to remote islands at the tip of South America, sensing a larger story, but he set this mystery aside and never returned to it. Almost two hundred years later, Jonathan Meiburg takes up this chase. He takes us through South America, from the fog-bound coasts of Tierra del Fuego to the tropical forests of Guyana, in search of these birds: striated caracaras, which still exist, though they're very rare. He reveals the wild, fascinating story of their history, origins, and possible futures. And along the way, he draws us into the life and work of William Henry Hudson, the Victorian writer and naturalist who championed caracaras as an unsung wonder of the natural world, and to falconry parks in the English countryside, where captive caracaras perform incredible feats of memory and problem-solving. *A Most Remarkable Creature* is a hybrid of science writing, travelogue, and biography, as generous and accessible as it is sophisticated, and absolutely riveting.

The Smart Neanderthal Clive Finlayson, 2019-02-15 Since the late 1980s the dominant theory of human origins has been that a 'cognitive revolution' (C.50,000 years ago) led to the advent of our species, *Homo sapiens*. As a result of this revolution our species spread and eventually replaced all existing archaic *Homo* species, ultimately leading to the superiority of modern humans. Or so we thought. As Clive Finlayson explains, the latest advances in genetics prove that there was significant interbreeding between Modern Humans and the Neanderthals. All non-Africans today carry some Neanderthal genes. We have also discovered aspects of Neanderthal behaviour that indicate that they were not cognitively inferior to modern humans, as we once thought, and in fact had their own rituals and art. Finlayson, who is at the forefront of this research, recounts the discoveries of his team, providing evidence that Neanderthals caught birds of prey, and used their feathers for symbolic purposes. There is also evidence that Neanderthals practised other forms of art, as the recently discovered engravings in Gorham's Cave Gibraltar indicate. Linking all the recent evidence, *The Smart Neanderthal* casts a new light on the Neanderthals and the 'Cognitive Revolution'. Finlayson argues that there was no revolution and, instead, modern behaviour arose gradually and independently among different populations of Modern Humans and Neanderthals. Some practices were even adopted by Modern Humans from the Neanderthals. Finlayson overturns classic narratives of human origins, and raises important questions about who we really are.

Are We Smart Enough to Know How Smart Animals Are? Frans de Waal, 2016-04-25 A New York Times bestseller: A passionate and convincing case for the sophistication of nonhuman minds. —Alison Gopnik, *The Atlantic* Hailed as a classic, *Are We Smart Enough to Know How Smart Animals Are?* explores the oddities and complexities of animal cognition—in crows, dolphins, parrots, sheep, wasps, bats, chimpanzees, and bonobos—to reveal how smart animals really are, and how we've underestimated their abilities for too long. Did you know that octopuses use coconut shells as tools, that elephants classify humans by gender and language, and that there is a young male chimpanzee at Kyoto University whose flash memory puts that of humans to shame? Fascinating, entertaining, and deeply informed, de Waal's landmark work will convince you to rethink everything you thought you knew about animal—and human—intelligence.

Birding Without Borders Noah Strycker, 2017-10-10 The story of how the associate editor of *Birding* magazine set himself a lofty goal: to become the first person to see half the world's birds in one year. In 2015, for 365 days, with a backpack, binoculars, and a series of one-way tickets, Noah Strycker traveled across forty-one countries and all seven continents, eventually spotting 6,042 species—by far the biggest birding year on record. This is no travelogue or glorified checklist. Noah ventures deep into a world of chronic sleep deprivation, airline snafus, breakdowns, mudslides, floods, war zones, ecologic devastation, conservation triumphs, common and iconic species, and scores of passionate bird lovers around the globe. By pursuing the freest creatures on the planet, he gains a unique perspective on the world they share with us—and offers a hopeful message that even as many birds face an uncertain future, more people than ever are working to protect them. “*Birding Without Borders* is light-hearted and filled with stories of exotic birds, risky adventures, and colorful birding companions.”—New York Times Book Review “Highly recommended for anyone interested in travel, natural history, and adventure.”—Library Journal “Even readers who wouldn't know a marvellous spatuletail from a southern ground hornbill will be awed by Strycker's achievement and appreciate the passion with which he pursues his interest.”—Publishers Weekly
