The Light of the World Joseph ibn Nahmias,Robert G.

Morrison,2016-03-01 This book contains an editionÑwith an

extensive introduction, translation and commentaryÑof *The Light of the World*, a text on theoretical astronomy by Joseph Ibn Nahmias, composed in Judeo-Arabic around 1400 C.E. in the Iberian

Peninsula. As the only text on theoretical astronomy written by a

Jew in any variety of Arabic, this work is evidence for a continuing relationship between Jewish and Islamic thought in the late fourteenth and early fifteenth centuries. The text's most lasting effect may have been exerted via its passage to Renaissance Italy, where it influenced scholars at the University of Padua in the early sixteenth century. With its crucial role in the development of European astronomy, as well as the physical sciences under Islam and in Jewish culture, *The Light of the World* is an important episode in Islamic intellectual history, Jewish civilization, and the history of astronomy.

The No-Salt, Lowest-Sodium Light Meals Book Donald A.

Gazzaniga, Maureen A. Gazzaniga, 2007-04-01 Perhaps

heartbreaking is the wrong word for a very happy event, one that brings tears to your eyes because you know what the alternative would have been. But however you describe it, the letters that Don Gazzaniga finds on his web site ever since his first cookbook was published easily bring tears to the reader's eyes. The doctor told him that the very low-sodium diet is the main thing responsible for this success and I couldn't wait to share it with you. When I said that your book saved [my husband's] life, I meant it. That first cookbook was a surprise to medical professionals and their

patients alike. Doctors have always believed that no one could ever get below 1500 milligrams of sodium a daily diet. Keep it at that level, Don's doctor told the sixty-three-year-old Gazzaniga in 1997. He had diagnosed his patient's problem as congestive heart failure and was about to sign him up for the only solution believed possible, a heart transplant. To Don, this was a challenge. After a lot of research, the help of nutritionist daughter, Jeannie, familiarity with the cuisines of many different countries, and hours in the kitchen, Don came up with a large selection of recipes and a twenty-eight-day menu that never went above five hundred milligrams of sodium a day! Yep! That's five hundred. And the food was delicious. The recipes in that first diet were gathered in a general cookbook that told readers just about everything they needed to know: where to find the right ingredients, how to make tasty substitutions that did not raise the sodium level, and more, with the sodium count given for each ingredient and each recipe. That was The No-Salt, Lowest-Sodium Cookbook. Don decided to embellish the general work with some specialties and, with his wife, Maureen, created The No-Salt, Lowest-Sodium Baking Book. If anyone thinks that you can't make delicious bread and pies and cookies and other baked goodies with very little or no sodium, try a

few of Don's recipes. i0 But suppose you want to celebrate your grandson's third birthday, or your doctor's latest green light, with a party and need delicious tidbits for the guests. Here they are in their new book. Sometimes you feel like a light lunch---a salad, a sandwich, a bowl of soup. Here they are. There are sections explaining where to buy special flavorings and the like, how to substitute low-sodium or sodium-free ingredients, and a foreword by Dr. Michael Fowler, director of the Stanford Heart Transplant Program and medical director of the Stanford Cardiomyopathy Center.

Light Driven Micromachines George K. Knopf, Kenji

Uchino, 2018-03-29 In *Light Driven Micromachines*, the fundamental principles and unique characteristics of light driven material structures, simple mechanisms and integrated machines are explored. Very small light driven systems provide a number of interesting features and unique design opportunities because streams of photons deliver energy into the system and provide the control signal used to regulate the response of the micron sized device. Through innovative material design and clever component fabrication, these optically powered tiny machines can be created to perform mechanical work when exposed to varying light intensity, wavelength, phase, and/or polarization. The book begins with the scientific background necessary to understand the nature of light and how light can initiate physical movement by inducing material deformation or altering the surrounding environment to impose micro-forces on the actuating mechanisms. The impact of physical size on the performance of light driven mechanisms and machines is discussed, and the nature of light–material interactions

is reviewed. These interactions enable very small objects and mechanical components to be trapped and manipulated by a focused light beam, or produce local temperature gradients that force certain materials to undergo shape transformation. Advanced phase transition gels, polymers, carbon-based films and piezoelectric ceramics that exhibit direct light-to-mechanical energy conversion are examined from the perspective of designing optically driven actuators and mechanical systems. The ability of light to create photothermal effects that drive microfluidic processes and initiate the phase transformation of temperature sensitive shape memory materials are also explored in the book. This compendium seeks to inspire the next generation of scientists and engineers by presenting the fundamental principles of this emerging interdisciplinary technology and exploring how the properties of light can be exploited for microfluidic, microrobotic, biomedical and space applications.

Shit, Actually Lindy West, 2020-10-20 One of the Best Books of 2020 by NPR's Book Concierge **Your Favorite Movies, Re-Watched** New York Times opinion writer and bestselling author Lindy West was once the in-house movie critic for Seattle's alternative newsweekly The Stranger, where she covered film with brutal honesty and giddy irreverence. In Shit, Actually, Lindy returns to those roots, re-examining beloved and iconic movies from the past 40 years with an eye toward the big questions of our time: Is Twilight the horniest movie in history? Why do the zebras in The Lion King trust Mufasa-WHO IS A LION-to look out for their

best interests? Why did anyone bother making any more movies after *The Fugitive* achieved perfection? And, my god, why don't any of the women in *Love, Actually* ever fucking talk?!?! From *Forrest Gump*, *Honey I Shrunk the Kids*, and *Bad Boys II*, to *Face/Off*, *Top Gun*, and *The Notebook*, Lindy combines her razor-sharp wit and trademark humor with a genuine adoration for nostalgic trash to shed new critical light on some of our defining cultural touchstones-the stories we've long been telling ourselves about who we are. At once outrageously funny and piercingly incisive, *Shit, Actually* reminds us to pause and ask, How does this movie hold up?, all while teaching us how to laugh at the things we love without ever letting them or ourselves off the hook. *Shit, Actually* is a love letter and a break-up note all in one: to the films that shaped us and the ones that ruined us. More often than not, Lindy finds, they're one and the same.
