*Smart Management* David Butcher, Martin Clarke, 2001-04-17 Politics play a central role in all organisations but to this point they have largely been seen as a negative force. Butcher and Clarke expose this as a misunderstanding and show how political behaviour is entirely endemic to managerial activity and how understanding and managing it can have extremely powerful positive effects. They provide an approach to managing politics by balancing personal and organisational interests and show how the centrality of politics to organisational life make it the ideal place from which to change existing patterns of power and influence. **The Use Case and Smart Grid Architecture Model Approach** Marion Gottschalk, Mathias Uslar, Christina Delfs, 2017-01-10 This book introduces readers to the fundamentals of the IEC 62559 Use Case Methodology, explains how it is related to the Smart Grid Architecture Model (SGAM), and details how a holistic view for both architecture and requirements engineering can be achieved. It describes a standardized and holistic approach to requirements engineering for smart grid projects based on work conducted in the context of the EU M/490 standardization mandate. Over the last years, this method has been established in Europe as the basic building block of requirements engineering in the utilities sector. The authors present a canonical, structured approach that users can apply to the Use Case Methodology and the SGAM, as well as open tools for this purpose. The application in various domains outside the smart grid is also discussed, as it can be used for critical infrastructures or system-of-systems domains like Industrie 4.0 and Ambient Assisted Living. Accordingly, the book also presents various architecture models for different fields of application, like EMAM, SCIAM, RAMI 4.0, and MAF.

**Smart Water Management** Henning Bjornlund, Stephanie Kuisma, James E. Nickum, Raya Marina Stephan, 2023-05-22 This book contributes to the

debate about the suitability and challenges of the Smart Water Management (SWM) approach. Smart Water Management has increasingly been promoted to manage water and wastewater more efficiently and cost effectively by industries and utilities in urban contexts at regional or city scales, while reducing overall consumption. It is based on the use of Information and Communication Technology (ICT) to provide real-time, automated data to resolve water challenges. Many of these technologies are complex and costly, however, and the approach tends to overlook cheaper and less high-tech (softer) approaches to address the same problems. Yet there may be opportunities for using them even in resource short rural communities in developing countries. The book includes examples of SWM systems in practice in diverse locations from Korea, Mexico, Paris, the Canary Islands and southern Africa, aimed at addressing a diverse set of problems, including monitoring water supply to refugees. Critical voices highlight the need for smart institutions to accompany smart technologies, the absurdity of applying SWM to dysfunctional legacy infrastructure systems, whether its adoption raises moral hazards, and whether SWM is the latest example of hegemonic masculinity in water management. The chapters in this book were originally published in Water International.
