The Poisonous Terrestrial Snakes of Our British Indian Dominions Frank Wall,1913

Mindprint, the subconscious art code Edmond Furter,2014-04-11 Visual archetypes are the DNA of culture. In artefacts and artworks, where archaeo-astronomers see ancient star maps, archaeologists see cultural traditions, and anthropologists see initiation secrets, appear a standard sequence of types, on an axial grid. Structural archaeology uses constellations as myth maps to find the structure of our perception. All inspired artists, in the Stone, Ice, Bronze and Iron Ages; Babylonians, Egyptians, Chinese, Celts, Mayans, Vikings and moderns, subconsciously express mindprint, our eternal artefact. The sixteen clusters of attributes are demonstrated in 200 examples of famous art and rock art works from every continent and culture. Archetypes are statistically proven, and their 'camouflage' is explained in terms of archaeology, anthropology, art history, psychology, philosophy, archaeo-astronomy, esoterica and spirituality. Readers will never look at art, artists or culture as a cumulative, learned or evolved craft again.

The Action Plan for Australian Lizards and Snakes 2017 Nicola Mitchell,Neil Cox,Philip Bowles,Reid Tingley,Stewart Macdonald,Glenn Shea,J Scott Keogh,John Woinarski,David Chapple,2019-12-01 Lizards and snakes (squamate reptiles) are the most diverse vertebrate group in Australia, with approximately 1000 described species, representing about 10% of the global squamate diversity. Squamates are a vital part of the Australian ecosystem, but their conservation has been hindered by a lack of knowledge of their diversity, distribution, biology and key threats. The Action Plan for Australian Lizards and Snakes 2017 provides the first comprehensive assessment of the conservation status of Australian squamates in 25 years. Conservation assessments are provided for 986 species of Australian lizards and snakes (including sea snakes). Over the past 25 years there has been a substantial increase in the number of species and families recognised within Australia. There has also been an increase in the range and magnitude of threatening processes with the potential to impact squamates. This has resulted in an increase in the proportion of the Australian squamate fauna that is considered Threatened. Notably over this period, the first known extinction (post-European settlement) of an Australian reptile species occurred – an indication of the increasingly urgent need for better knowledge and management of this fauna. Six key recommendations are presented to improve the conservation management and plight of Australian squamates. This Action Plan represents an essential resource for research scientists, conservation biologists, conservation managers, environmental consultants, policy makers from Commonwealth and State/Territory governments, and the herpetological community.

Who's in the Game? Terri Toles Patkin, 2020-11-20 Some board games--like Candy Land, Chutes & Ladders, Clue, Guess Who, The Game of Life, Monopoly, Operation and Payday--have popularity spanning generations. But over time, updates to games have created significantly different messages about personal identity and evolving social values. Games offer representations of gender, sexuality, race, ethnicity, religion, age, ability and social class that reflect the status quo and respond to social change. Using popular mass-market games, this rhetorical assessment explores board design, game implements (tokens, markers, 3-D elements) and playing instructions. This book argues the existence of board games as markers of an ever-changing sociocultural framework, exploring the nature of play and how games embody and extend societal themes and values.
