*Radioecological Techniques* Vincent Schultz, F. Ward Whicker, 2012-12-06 During the twenty years the authors have been associated with the field of radiation ecology, there has been a diversified and increasing use of radionuclides in applied and basic biological research. Prior to the advent of the atomic age in the 1940s the use of radionuclides as tracers was initiated, and following that period one observed a dramatically increased use in many disciplines. Concurrent with this increase there appeared many books and articles on radionuclide techniques useful to biologists in general. Although only a few ecological applications were evident in these early years, ecologists were quick to see the opportunities available in their field. In the United States, major centers for such activities included Oak Ridge National Laboratory and the U. S. Atomic Energy Commission's Savannah River Plant. At Oak Ridge National Laboratory Dr. Stanley I. Auerbach, director of ecological activities, encouraged with remarkable success the use of tracers by his associates. Dr. Eugene P. Odum had the foresight to see that radionuclide tracers provided the means to solve many problems of interest to ecologists. Consequently, his research included some unique radio tracer applications at the Savannah River Plant. In addition he encouraged others involved in ecological activities at the Savannah River Plant to do likewise. Ecologists such as Dr. Robert C. Pendleton at the U. S. Atomic Energy Commission's Hanford Works applied radionuclides in their research. To these early investigators and to those who followed we owe the opportunity to write this book.

*Field Book of North American Mammals* Harold Elmer Anthony, 2017-10-28 Excerpt from *Field Book of North American Mammals: Descriptions of Every Mammal Known North of the Rio Grande, Together With Brief Accounts of Habits, Geographical Ranges, Etc* Descriptions of new species and subspecies are continually being published. Since work on this field book began; quite a few such papers have appeared and it has become necessary to revise manuscript to include changes. For the purposes of the field book it has seemed advisable to draw a dividing line somewhere; otherwise the manuscript would have been unduly delayed by going back over copy to bring it up to date. Miller's List of North American Recent Mammals offered a satisfactory solution for this problem and the 1923 edition was chosen as the basis for this field book. However, I have used all subsequent papers for data other than new names and have attempted to consult every source up to the time of going to press; also the new names and changes of nomenclature in important revisions since 1923 have been used. Archaeology of Piedra Museo Locality Laura Miotti, Monica Salemmme, Darío Hermon, 2023-02-05 This book highlights the knowledge about landscapes and characteristics of the earliest hunter-gatherer lifeway in Southern Patagonia. It presents an analysis of the archaeological investigations carried out during three decades by an interdisciplinary team that involved archaeologists, anthropologists, paleontologists, geologists and specialists in pollen and diatoms. The database yielded was recovered from systematic survey and excavations from the Pleistocene and Holocene stratigraphic layers of the rockshelter known as AEP-1, Piedra Museo Locality, situated in the central plateau of Santa Cruz Province, Argentina. Piedra Museo is a unique place in the world of high academic interest with some of the earliest archaeological remains in the Americas. Researchers defined two strata and several Stratigraphic units in the site based on the sedimentological and pedological characteristics. The depositional zones contain archaeological remains that are interpreted as hunting events corresponding to two main different occasions in the human colonization of the region, and a third human occupation during the Middle Holocene. Last one occurred then of the massive rockshelter roof collapse. The faunal remains led to a new approach to the palaeoenvironmental evolution of this enclosed basin. This volume describes the management of lithic raw materials and social networks from first human occupation of the Patagonian region to territorial consolidation of hunter-gatherer societies.

Biotic Homogenization Julie L. Lockwood, Michael L. McKinney, 2011-06-28 Biological homogenization is the dominant process shaping the future global biosphere. As global transportation becomes faster and more frequent, it is inevitable that biotic intermixing will increase. Unique local biotas will become extinct only to be replaced by already widespread biotas that can tolerate human activities. This process is affecting all aspects of our world: language, economies, and ecosystems alike. The ultimate outcome is the loss of uniqueness and the growth of uniformity. In this way, fast food restaurants exist in Moscow and Java Sparrows breed on Hawaii. Biological homogenization qualifies as a global environmental catastrophe. The Earth has never witnessed such a broad and complete reorganization of species distributions.

**The Atlas of European Mammals** Anthony J. Mitchell-Jones, 1999 This volume presents maps of 194 species plotted on a 50km UTM grid and entirely based on field observations. Over 93,000 records are mapped with separate symbols for data collected before or after 1970. Where appropriate, recent extinctions have been taken into account.

Rats, Lice and History Hans Zinsser, 2011-12-31 When *Rats, Lice and History* appeared in 1935, Hans Zinsser was a highly regarded Harvard biologist who had never written about historical events. Although he had published under a pseudonym, virtually all of his previous writings had dealt with infections and immunity and had appeared either in medical and scientific journals or in book format. Today he is best remembered as the author of *Rats, Lice, and History*, which gone through multiple editions and remains a masterpiece of science writing for a general readership. To Zinsser, scientific research was high adventure and the investigation of infectious disease, a field of battle. Yet at the same time he maintained a love of literature and philosophy. His goal in *Rats, Lice and History* was to bring science, philosophy, and literature together to establish the importance of disease, and especially epidemic infectious disease, as a major

force in human affairs. Zinsser cast his work as the biography of a disease. In his view, infectious disease simply represented an attempt of a living organism to survive. From a human perspective, an invading pathogen was abnormal; from the perspective of the pathogen it was perfectly normal. This book is devoted to a discussion of the biology of typhus and history of typhus fever in human affairs. Zinsser begins by pointing out that the louse was the constant companion of human beings. Under certain conditions—to wash or to change clothing—lice proliferated. The typhus pathogen was transmitted by rat fleas to human beings, who then transmitted it to other humans and in some strains from human to human. Rats, Lice and History is a tour de force. It combines Zinsser's expertise in biology with his broad knowledge of the humanities

*Yup'ik Eskimo Dictionary* ,2012 The most comprehensive Yup'ik dictionary in existence, the second edition of this important work now adds extensive research on Central Alaskan Yup'ik, enhancing the forty years of research done by Steven A. Jacobson on the Yup'ik language and dialects. Over these decades, Jacobson has combed through records of explorers, linguists, missionaries, and anyone who has come in contact with the actively migratory Yup'ik people. Combined with information from native Yup'ik speakers, that research has led to a richly detailed dictionary that covers the entire language and all its dialects. The dictionary also offers sections on Yup'ik spelling, early vocabulary, demonstrative words, and important intersections of Yup'ik language and culture such as the kayak, dogsled, parka, and old-style dwellings.

**No-no Boy** John Okada,1957

A Latin Lover in Ancient Rome Walter Ralph Johnson,2009 Over the centuries, Latin love elegy has inspired love poetry in the West from Petrarch to Pound. A Latin Lover in Ancient Rome: Readings in Propertius and His Genre offers a critical reevaluation of the Latin elegiac poet Propertius, situating him within the social and political milieu of first-century BCE Rome. W. R. Johnson's study is centered on close readings of the poems in Propertius' four books that emphasize both his celebration of erotic freedom as a manifestation of the sovereignty of the individual and his insistence on the value of this freedom, especially when it is threatened by autocratic ideology. Many recent titles on Propertius have tended to minimize or ignore this aspect of the poet's work, concentrating instead on neo-formalism or Lacanian psychology. Johnson restores Propertius' erotic creed and his politics to the core of his poetics and his career. He offers a vivid picture of the sociopolitical and erotic world of the late Roman Republic and the early years of the Empire which hatched Latin love elegy and allowed it to flourish. This study aims to redirect attention to the pleasures and energies Propertius provides that later generations of poets and readers discovered in and through him.
