The History of Human Space Flight Ted

Spitzmiller, 2017-02-21 Military Writers Society of America Awards, Gold Medal for History

Highlighting men and women across the globe who have dedicated themselves to pushing the limits of space exploration, this book surveys the programs, technological advancements, medical equipment, and automated systems that have made space travel possible. Beginning with the invention of balloons that lifted early explorers into the stratosphere, Ted Spitzmiller describes how humans first came to employ lifting gasses such as hydrogen and helium. He traces the influence of science fiction writers on the development of rocket science, looks at the role of rocket societies in the early twentieth century, and discusses the use of rockets in World War II warfare. Spitzmiller considers the engineering and space medicine advances that finally enabled humans to fly beyond the earth's atmosphere during the space race between the United States and the Soviet Union. He recreates the excitement felt around the world as Yuri Gagarin and John Glenn completed their first orbital flights. He recounts triumphs and tragedies, such as Neil Armstrong's one small step and the Challenger and Columbia disasters. The story continues with the development of the International Space Station, NASA's interest in asteroids and Mars, and the emergence of China as

a major player in the space arena. Spitzmiller shows the impact of space flight on human history and speculates on the future of exploration beyond our current understandings of physics and the known boundaries of time and space.

History of Rocketry & Space Travel Wernher Von Braun, Frederick Ira Ordway (III), 1975 It reviews the work of three great pioneers of the early part of the twentieth century - America's Goddard, Germany's Oberth, and Russia's Tsiolkovsky - as well as the accomplishments of Esnault-Pelterie in France, Isaac Lubbock's work on liquid propellants in Great Britain, and the development of the Russian Katyusha. It details the experiments of von Braun and Walter R Dornberger in Germany before World War II, and gives a full account of the work of their development team on the V-2 rocket at the Peenemunde Center. The dramatic story of the German scientists' surrender to American forces in 1945, as well as their eventual accomplishments at the Army's Redstone Arsenal and subsequently NASA's Marshall Space Flight Center in Huntsville, Alabama, is also told at first hand.

Space Journey Jillian Cutting, 1993

The Space Barons Christian Davenport, 2018-03-20

The historic quest to rekindle the human exploration and colonization of space led by two rivals and their vast fortunes, egos, and visions of space as the next entrepreneurial frontier The Space Barons is the story of a group of billionaire entrepreneurs who are pouring their fortunes into the epic resurrection of the American space program. Nearly a half-century after Neil Armstrong walked on the moon, these Space Barons-most notably Elon Musk and Jeff Bezos, along with Richard Branson and Paul Allen-are using Silicon Valley-style innovation to dramatically lower the cost of space travel, and send humans even further than NASA has gone. These entrepreneurs have founded some of the biggest brands in the world-Amazon, Microsoft, Virgin, Tesla, PayPal-and upended industry after industry. Now they are pursuing the biggest disruption of all: space. Based on years of reporting and exclusive interviews with all four billionaires, this authoritative account is a dramatic tale of risk and high adventure, the birth of a new Space Age, fueled by some of the world's richest men as they struggle to end governments' monopoly on the cosmos. The Space Barons is also a story of rivalry-hard-charging startups warring with

established contractors, and the personal clashes of the leaders of this new space movement, particularly Musk and Bezos, as they aim for the moon and Mars and beyond.

Wonders All Around Bruce McCandless

III, 2021-07-13 The Man You Never Knew You Knew
It's one of the most powerful and popular images in the history of space exploration: an astronaut in a snow-white spacesuit, untethered and floating alone in an expanse of blue. Bruce McCandless II is the man in that spacesuit, and Wonders All Around: The Incredible True Story of Astronaut Bruce McCandless II and the First Untethered Flight in Space is the thoroughly engrossing, extensively researched story of his inspiring life and groundbreaking accomplishments, as told by his son, a gifted writer and storyteller. Bruce McCandless II, a Navy fighter pilot, joined NASA in 1966. He was Houston's capsule communicator—the person talking to the astronauts—as Apollo 11's Neil Armstrong made his giant leap for mankind in 1969. McCandless supported subsequent Apollo flights and developed technology and techniques his fellow astronauts used during the Skylab program, working behind the scenes until he was chosen to ride Challenger into space on the tenth shuttle mission. When he stepped into the cosmos to test the Manned Maneuvering Unit, he became a space flight icon. But the road to that incredible feat was not the sure bet it should have been for such a gifted man. Bruce McCandless II was an astronaut for 24 years, and his story encompasses the development of the space agency itself—the changes in focus, in personnel, in approach, and in the city of Houston that grew up with it. Wonders All Around is more than a catalogue of McCandless's extraordinary achievements, which included work on the design, deployment, and repair of the Hubble Space Telescope. It is also a tale of perseverance and devotion. Recounted with

insight and humor, this book explores the relationship between a father and a son, men of two very different generations. And finally, it is an exploration of the mindset of one unique individual, and the courage, imagination, and tenacity that propelled him and his country to their place in the forefront of space history. From Wonders All Around: Bruce McCandless turned his Jeep around and screeched out of the cul-de-sac in front of our house for the ten-minute drive to the space center. The moon, a waxing crescent, was standing thirty degrees above the western horizon, and my father slipped into a sort of reverie as he sped toward it on NASA Road One. The moon floated serene and imperturbable in front of him like a black-and-white photograph of itself, Earth's gravitational remora, her pale silent sister, movie star and legend, goddess and mirage. Bruce McCandless had just turned thirty-two. He was an engineer, a true son of science, a distant nephew of Sir Isaac Newton. He knew the formulas required for achieving orbital velocity, could tell you the fuel mixtures you needed, the stages and timing of rocket-booster separations. He brushed sentiments away like so many spider webs. But even he was having trouble believing that human beings—his colleagues and friends—were up there in the sky, getting ready to do something no one had ever done before. He was going to be part of it. He would be talking to two men as they walked on the moon. The young astronaut hadn't quite reached his lifelong goal of touching the lunar surface, but he was close. He was almost there. He could feel it.

How to Make a Spaceship Julian

Guthrie, 2017-09-05 A New York Times bestseller! The historic race that reawakened the promise of manned spaceflight Winner of the 2016 Eugene E. Emme Award for Astronautical Literature A Finalist for the PEN/E. O. Wilson Literary Science Writing Award Alone in a Spartan black cockpit, test pilot Mike Melvill rocketed toward space. He had eighty seconds to exceed the speed of sound and begin the climb to a target no civilian pilot had ever reached. He might not make it back alive. If he did, he would make history as the world's first commercial astronaut. The spectacle defied reason, the result of a competition dreamed up by entrepreneur Peter Diamandis, whose vision for a new race to space required small teams to do what only the world's largest governments had done before. Peter Diamandis was the son of hardworking immigrants who wanted their science prodigy to make the family proud and become a doctor. But from the age of eight, when he watched Apollo 11 land on the Moon, his singular goal was to get to space. When he realized NASA was winding down manned space flight, Diamandis set out on one of the great entrepreneurial adventure stories of our time. If the government wouldn't send him to space, he would create a private space flight industry himself. In the 1990s, this idea was the stuff of science fiction. Undaunted, Diamandis found inspiration in an unlikely place: the golden age of aviation. He discovered that Charles

Lindbergh made his transatlantic flight to win a \$25,000 prize. The flight made Lindbergh the most famous man on earth and galvanized the airline industry. Why, Diamandis thought, couldn't the same be done for space flight? The story of the bullet-shaped SpaceShipOne, and the other teams in the hunt, is an extraordinary tale of making the impossible possible. It is driven by outsized characters—Burt Rutan, Richard Branson, John Carmack, Paul Allen—and obsessive pursuits. In the end, as Diamandis dreamed, the result wasn't just a victory for one team; it was the foundation for a new industry and a new age.

Magnificent Desolation Buzz Aldrin, Ken Abraham, 2010 Recounts the astronaut's life and career, including his childhood, the landmark 1969 moon landing, and his battles with alcoholism and depression after his fame.
