**What Is Space Junk?** Todd Swatling, 2018-07-15 Every generation is filled with the wonder of what's out there beyond our planet, making space travel and exploration one of the most popular science topics of all time. But what happens to all that stuff we send up into outer space? Does it come back down to Earth or stay up there forever? This exciting, high-interest topic attracts even reluctant readers to read about STEAM topics. Fact boxes add extra information that's Out of this World! throughout the book. Each spread is complemented with vivid NASA photography.

**Space Junk** Karen Romano Young, 2016 This book examines the proliferation of space debris in outer space and discusses methods of retrieving and disposing of the material.--

**Space Garbage** Ruth Owen, 2014-12-15 Are people in danger of being hit by falling space garbage? Readers find the answer as they learn about what space garbage is and how it could affect other objects in space and people on Earth. Through comprehensive text, readers learn about the many kinds of space garbage, including pieces of rockets! They also find fact boxes designed to give them even more information about space garbage. This otherworldly problem is shown in vivid detail through amazing photographs. Readers will be excited to learn about space through a closer look at the garbage orbiting Earth.

This debris includes anything from large satellites and rocket parts to tiny screws and paint chips. Space junk can damage a spacecraft-and also cause issues for humans on Earth. This book takes readers on an exciting out-of-this-world voyage and uncovers cutting-edge technology while supporting STEM and NGSS standards. Each book contains fact boxes,

sidebars, a glossary, an index, and places to go for more information--

**Space Junk** Richard Hantula, Isaac Asimov, 2005-12-15

Describes what can cause space debris, the problems it can cause, and how to clean up the pollution of space around the Earth and beyond.

**Space Junk** Steve Kortenkamp, 2008 Describes the types of debris orbiting Earth and discusses the hazards space junk presents to spacecraft and astronauts.

**Dr Space Junk vs The Universe** Alice Gorman, 2020-11-10 A pioneering space archaeologist explores artifacts left behind in space and on Earth, from moon dust to Elon Musk's red sports car. Alice Gorman is a space archaeologist: she examines the artifacts of human encounters with space. These objects, left behind on Earth and in space, can be massive (dead satellites in eternal orbit) or tiny (discarded zip ties around a defunct space antenna). They can be bold (an American flag on the moon) or hopeful (messages from Earth sent into deep space). They raise

interesting questions: Why did Elon Musk feel compelled to send a red Tesla into space? What accounts for the multiple rocket-themed playgrounds constructed after the Russians launched Sputnik? Gorman—affectionately known as “Dr Space Junk”—takes readers on a journey through the solar system and beyond, deploying space artifacts, historical explorations, and even the occasional cocktail recipe in search of the ways that we make space meaningful. Engaging and erudite, Gorman recounts her background as a (nonspace) archaeologist and how she became interested in space artifacts. She shows us her own piece of space junk: a fragment of the fuel tank insulation from Skylab, the NASA spacecraft that crash-landed in Western Australia in 1979. She explains that the conventional view of the space race as “the triumph of the white, male American astronaut” seems inadequate; what really interests her, she says, is how everyday people engage with space. To an archaeologist, objects from the past are significant because they remind us of what we might want to hold on to in the future.

#### Active Debris Removal in Space Robin Biesbroek, 2015-02-18

There are 17,000 traceable objects in space. However only 600 of these objects are active satellites. The other 96% can be classified as space debris; human-made elements or fragments that do not function anymore. These objects are now the reason why satellite operators get collision warnings on a weekly basis, and every week at least one of these debris objects enters the atmosphere. In the meantime, the number of debris objects in space keeps increasing... It is time for a change. People need to realize that our environment includes space around the Earth, and that this space is polluted. It is time to start actively removing space debris. But access to space is expensive, and catching debris objects has never been done before. Now for the first time, Robin Biesbroek, who manages active debris removal studies at the European Space Agency, describes solutions to clean up space in a non-technical way. Apart from technical design solutions to create a

'garbage truck for space', other questions such as 'what are the legal applications?', 'Where is space debris?', 'can we make a business case out of debris removal?' are discussed.

**Sky Static** Antony Milne, 2002-10-30 Space junk crashing into Earth is a real and escalating danger. Milne provides the first synthesis of the interdisciplinary work of the scientific community, which has been investigating how the satellite industry can be protected from manmade and natural space hazards. The result is an invaluable book for those concerned with space missions and space disasters, those worried about cosmic radiation and its effects on humans, members of the Spaceguard defense movement, and anyone concerned with defense and international cooperation efforts in general. Tens of millions of objects may exist in space, ranging in size from grains of sand to entire rocket boosters. Many fireballs seen in the skies, often thought to be UFOs, are in fact manmade debris. Plutonium and other highly toxic fuels from failed Russian craft have already contaminated inhabited areas of Central Asia. Natural hazards such as comet particles can travel at 100 times the speed of a bullet and can severely damage satellites. There is also the danger of spaceweather effects, such as cosmic rays, that could interfere with a spacecraft's electronics and interrupt the global transmission of telephones and television.

Simulator describes the phenomena of 'space junk' in the earth's orbit, showing points of interest between the moon and the earth such as geosynchronous orbit, medium earth orbit, and the International Space Station. Images of space toys, spaceships and action figures from various science fiction 'universes' as well as replicas of actual spacecraft, are used as stand-ins for the orbital debris itself. The book is screen and letterpress printed and viewable in 3D with enclosed anaglyph glasses. Drum leaf binding with metal covers.
