Space Rescue Shayler David,2009-03-17 Looks forward to the completion of the ISS, possibility of return to the moon, manned flights to Mars, and the prospect of safety and rescue far beyond. Describes the role of Mission Control and recovery forces in ensuring the support from the ground to the crew in space. Provides a unique range of historic archive of material on the Russian programme. Presents a review of the Columbia accident, its investigation and various proposed rescue scenarios. Details escape systems devised for rocket research aircraft, early manned spacecraft, abort and recovery options from Earth orbit, and from lunar distance. Demonstrates that crew safety has been a factor in planning and mounting on all manned spaceflights.

Astrotwins -- Project Rescue Mark Kelly,2016-03-01 Twins Mark and Scott discover an abandoned Apollo command module and take off to rescue a stranded Russian cosmonaut in the second Astrotwins adventure from retired NASA astronaut and the #1 New York Times bestselling author of Mousetronaut, Mark Kelly. Mark and Scott Kelly, who are mostly known for getting into trouble, are finally back from their first space adventure. The twins have wanted to explore space ever since they were little and watched Neil Armstrong walk on the moon. And when they hear that a Russian cosmonaut is trapped inside the Salyut space station now orbiting 220 miles above the surface of the Earth, they wish they could find a way to help. While staying in the countryside at their grandfather's house with their friend Jenny (aka Egg), the twins repurpose a NASA Titan 2 rocket ship being stored nearby. Complete with spacesuits and snacks, the twins take off on their rescue mission. Will they ever see their family or their grandfather's backyard again? Written by a NASA astronaut with four space flights under his belt, the second exciting Astrotwins story includes extensive back matter on the space program with fantastic facts and details.

The Century of Space Science J.A. Bleeker,Johannes Geiss,M. Huber,2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field. Hence, at this point in history we are in a unique position to gain first-hand insight into the field and its development. To this end, The Century of Space Science, a scholarly, authoritative, reference book presents a chapter-by-chapter retrospective of space science as studied in the 20th century. The level is academic and focuses on key discoveries, how these were arrived at, their scientific consequences and how these discoveries advanced the thoughts of the key players involved. With over 90 world-class contributors, such as James Van Allen, Cornelis de Jager, Eugene Parker, Reimar Lüst, and Ernst Stuhlinger, and with a Foreword by Lodewijk Woltjer (past ESO Director General), this book will be immensely useful to readers in the fields of space science, astronomy, and the history of science. Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection.

Jones,Michael Benson,2002-01-01 Coverage includes: the history of NASA, from its origins in the 1950s as the Jet Propulsion Laboratory and Projects Mercury and Gemini; the history and timeline, triumphs and tragedies of the famed Apollo missions, including the historic Apollo 11, which put the first men on the Moon in 1969; NASA's contributions to our everyday life, most notably on robotics and the creation of cutting-edge research on aerodynamics and chapters on important NASA discoveries: the Pioneer and Voyager Spacecraft, the Hubble Space Telescope, communications satellites such as the Echo, Telstar, and Syncom.

Soldiers ,1977

This New Ocean William E. Burrows,1999-11-05 It was all part of man's greatest adventure--landing men on the Moon and sending a rover to Mars, finally seeing the edge of the universe and the birth of stars, and launching planetary explorers across the solar system to Neptune and beyond. The ancient dream of breaking gravity's hold and taking to space became a reality only because of the intense cold-war rivalry between the superpowers, with towering geniuses like Wernher von Braun and Sergei Korolyov shelving dreams of space travel and instead developing rockets for ballistic missiles and space spectacles. Now that Russian archives are open and thousands of formerly top-secret U.S. documents are declassified, an often startling new picture of the space age emerges: the frantic effort by the Soviet Union to beat the United States to the Moon was doomed from the beginning by gross inefficiency and by infighting so treacherous that Winston Churchill likened it to dogs fighting under a carpet; there was more than science behind the United States' suggestion that satellites be launched during the International Geophysical Year, and in one crucial respect, Sputnik was a godsend to Washington; the hundred-odd German V-2s that provided the vital start to the U.S. missile and space programs legally belonged to the Soviet Union and were spirited to the United States in a derring-do operation worthy of a spy thriller; despite NASA's claim that it was a civilian agency, it had an intimate relationship with the military at the outset and still does--a distinction the Soviet Union never pretended to make; constant efforts to portray astronauts and cosmonauts as Boy Scouts were often contradicted by reality; the Apollo missions to the Moon may have been an unexcelled political triumph and feat of exploration, but they also created a headache for the space agency that lingers to this day. This New Ocean is based on 175 interviews with Russian and American scientists and engineers; on archival documents, including formerly top-secret National Intelligence Estimates and spy satellite pictures; and on nearly three decades of reporting. The impressive result is this fascinating story--the first comprehensive account--of the space age. Here are the strategists and war planners; engineers and scientists; politicians and industrialists; astronauts and cosmonauts; science fiction writers and journalists; and plain, ordinary, unabashed dreamers who wanted to transcend gravity's shackles for the ultimate ride. The story is written from the perspective of a witness who was present at the beginning and who has seen the conclusion of the first space age and the start of the second.

Mission Control Michael Peter Johnson,2015-10-18 Brave astronauts, flaring rockets, and majestic launches are only one side of the story of spaceflight. Any mission to space depends on years--if not decades--of work by thousands of dedicated individuals on the ground. These are the people whose voices offer a friendly link to Earth in the void of space, whose hands maneuver rovers across the face of planets, and whose skills guide astronauts home. This book is a long-overdue history of three major centers that have managed important missions since the dawn of the space age. In Mission Control, Michael Johnson explores the famous Johnson Space Center in Houston, the Jet Propulsion Laboratory in Pasadena, and the European Space Operations Centre in Darmstadt, Germany--each a strategically designed micro-environment responsible for the operation of spacecraft and the safety of passengers. He explains the motivations behind the location of each center and their intricate design. He shows how the robotic spaceflight missions overseen in Pasadena and Darmstadt set these centers apart from Houston, and compares the tracking networks used for different types of spacecraft. Johnson argues that the type of spacecraft and the missions they controlled--not the nations they represented--defined how the centers developed, yet these centers ended up playing vital national roles as space technology became a battleground for international power struggles in the Cold War years and even after. The most visible part of a conflict that was just as real as the wars in Korea, Vietnam, and Afghanistan and caused great global anxiety, mission control centers have served as symbols of national security in the public eye and

pivotal links in the history of modern technology.

Raiders or Elite Infantry? David W. Hogan,1992-12-10 How have the U.S. Army Rangers acted as special operations forces in military operations since 1942? Hogan's study examines the nature and purpose of the Rangers over the past fifty years and shows how they have served as scouts, raiders, assault troops, and elite infantry. They have spearheaded amphibious landings, raided enemy prison camps, patrolled behind enemy lines in Korea, served alongside Green Berets in Vietnam, and carried out special missions in Grenada. Professional officers, military historians, students, and general readers will find this a fascinating history. This analytical account opens with a short description of the origins of the Ranger legend in America and then moves to a discussion of their use in World War II, as commandos in 1942, then as spearheaders in 1943 and 1944, as line infantry in Europe and as special operations forces in the Pacific. This provocative assessment also traces the development of Ranger raider units in Korea, the special training and use of Green Berets as Rangers in Vietnam, and the shifting of Ranger roles into more complex and varied types of operations in Vietnam and Grenada and in a world of increasing terrorism and changing combat situations. Illustrations, maps, and a lengthy bibliography add to the usefulness of the study.

1950s "Rocketman" TV Series and Their Fans C. Miller,A. Van Riper,A. Bowdoin Van Riper,2012-08-30 The fourteen essays featured here focus on series such as Space Patrol, Tom Corbett, and Captain Z-Ro, exploring their roles in the day-to-day lives of their fans through topics such as mentoring, promotion of the real-world space program, merchandising, gender issues, and ranger clubs - all the while promoting the fledgling medium of television.
