**Counterspace** William B. Scott, Michael J. Coumatos, William J. Birnes, 2009-10-13 In *Space Wars*, Scott, Coumatos, and Birnes created a fascinating war gaming scenario of how World War III might unfold in above the Earth's surface. Now this thrilling team of writers reunites with *Counterspace*, an even more chilling fictionalized look at America's most catastrophic fears. What if North Korea detonated a nuclear weapon in space and silenced dozens of satellites? What if an Iranian missile threatened to destroy Israel, while a Venezuelan research satellite endangered one of the US's most promising space initiatives? What if tech-savvy terrorist cells unleashed back-to-back horrors in California, creating an avalanche of crises overnight, as national leaders robbed of spy satellite imagery were forced to make decisions in the blind? These are the scenarios of *Counterspace*, a frighteningly plausible look at threats to the United States and the world. Scott, Coumatos, and Birnes use war gaming scenarios to show how the US Strategic Command might choose to fight off these menaces and prevent global disaster. Combining current and future technology with our enemies' grandest plans, *Counterspace* is equally a terrifying possibility and a hopeful affirmation that America can and will be ready to face such dangers, told with the pulse-pounding power of a modern day thriller. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

**War in Space** Bowen Bleddyn E. Bowen, 2020-06-18 Applying strategic theory to outer space and drawing out the implications for international relations Offers a definitive and original vision of space warfare that theorises often-overlooked aspects of contemporary space activities based in the discipline of Strategic Studies. This original research draws out the implications of spacepower for wider debate in grand strategy and IR. Applies the theory in a topical and contentious area within contemporary grand strategy - anti-access and area-denial warfare in the Taiwan Strait between China and America. Key principles are summarised in seven propositions to make the key take-aways of theory applicable and memorable for researchers and practitioners. This book presents a theory of spacepower and considers the implications of space technology on strategy and international relations. The spectre of space warfare stalks the major powers as outer space increasingly defines geopolitical and military competition. As satellites have become essential for modern warfare, strategists are asking whether the next major war will begin or be decided in outer space. Only strategic theory can explore the decisiveness and effects of war in space upon 'grand strategy' and international relations. The author applies the wisdom of military strategy to outer space, and presents a compelling new vision of Earth orbit as a coastline, rather than an open ocean or an extension of airspace as many have assumed. Rooted in

the classical military works of Clausewitz, Mahan, and Castex to name a few, this book presents comprehensive principles for strategic thought about space that explain the pervasive and inescapable influence of spacepower on strategy and the changing military balance of the 21st century.

The First Space War J Furman Daniel, III, T K Rogers, 2023-05-15 Unfortunately, much of what people believe about war in space has been shaped, or misshaped, by Hollywood and other forms of popular media. In this book a STEM educator and a political science professor team up to explore the possibilities for warfare in space and explain why almost everything you've learned about space wars from movies is disappointingly wrong. The truth is stranger and more interesting than fiction. Using history, politics and STEM as guides, this book provides a detailed account of how Earth's first war in space will be fought. As we show, it will begin not as an invasion of Earth by super-advanced aliens but by Earth starting a war with its Martian colony.

**AU-18 Space Primer** Air Command Staff College, 2012-08-01 The US National Space Policy released by the president in 2006 states that the US government should develop space professionals. As an integral part of that endeavor, AU-18, Space Primer, provides to the joint war fighter an unclassified resource for understanding the capabilities, organizations, and operations of space forces. This primer is a useful tool both for individuals who are not space aware-unacquainted with space capabilities, organizations, and operations-and for those who are space aware, especially individuals associated with the space community, but not familiar with space capabilities, organizations, and operations outside their particular areas of expertise. It is your guide and your invitation to all the excitement and opportunity of space. Last published in 1993, this updated version of the Space Primer has been made possible by combined efforts of the Air Command and Staff College's academic year 2008 Jointspacemindedness and Operational Space research seminars, as well as select members of the academic year 2009 Advanced Space research seminar. **Rebuilding American Military Power in the Pacific** Robbin F. Laird, Edward

Timperlake, Richard Weitz, 2013-10-28 This volume examines how the U.S. military must rebuild in the wake of Iraq/Afghanistan, and refocus its power projection to face the new challenges emerging in the Pacific and with China. Rebuilding American Military Power in the Pacific: A 21st-Century Strategy provides an all-encompassing look at the challenges facing the United States in shaping a 21st-century Pacific strategy: dealing with the growing Chinese colossus, the unpredictable nuclear challenge presented by North Korea, the

dynamic of the Arctic opening, and maintaining the security of the conveyor belt of goods and services in the Pacific. Can the United States successfully train and prepare for the 21st century, and break free from the mindset that determined its strategies in the previous century? The authors of the work explain why a carefully considered, fully modernized Pacific strategy is a key element for the evolution of American military power—and why shaping an effective air and maritime strategy in the Pacific as well as globally is the crucial challenge facing the U.S. military and the policy community. Written by authors with significant access to the media, think tanks, and high-level politicians, the book provides an insider's look at how American military leaders are building out relevant capabilities in the Pacific to defend America and its allies, and it contains extensive interviews with those leaders.

**Space Force!** Taylor Dinerman, 2021-09-14 The desire to establish a US Space Force has been around for decades, in both science fiction and in the minds of people who attempt to seriously consider what our nation needs in order to deter future wars (and if necessary, to fight and win them). As an institution, the US Space Force has gotten off to a shaky start; however, prolific space writer Taylor Dinerman has great confidence that someday soon, it will find the right leadership and eventually be emancipated from the Department of the Air Force. At that point, the institution can begin to truly serve the great cause of creating a spacefaring civilization—as it was always meant to.

Space Infrastructures: From Risk to Resilience Governance U. Tatar, A.V. Gheorghe, O.F. Keskin, 2020-04-17 Space-critical infrastructures represent an interdependent system of systems consisting of workforce, environment, facilities, and multidirectional interactions. These are essential for the maintenance of vital societal functions such as health, safety, security, mobility, and the economic and social well-being of people, and their destruction or disruption would have a significant impact on society as a whole. In all, 79 nations and government consortia currently operate satellites, with 11 countries operating 22 launch sites. Despite creating new challenges, this multi-actor environment offers opportunities for international cooperation, but making the most of these opportunities requires a holistic approach to space-critical infrastructure, away from strictly defined space technologies and towards understanding the resilience of complex systems and how they are intertwined in reality. This book presents papers from the NATO Advanced Research Workshop (ARW), entitled Critical Space Infrastructure: From Vulnerabilities and Threats to Resilience, held in Norfolk, Virginia, USA from 21-22 May 2019. The ARW brought together representatives from academia, industry, and international organizations in an effort to deepen scientific and technological understanding of space-critical infrastructures and explore the implications for national and international space security and resilience. It examined space as a critical infrastructure from a multidisciplinary perspective in accordance with NATO's Strategic Concept. The 29 chapters in the book are divided into six sections covering space infrastructure: governance; cybersecurity; risk, resiliency and complexity; emerging technologies such as block chain, artificial intelligence and quantum computing; application domains; and national approaches and applications.
