**Computer Simulations of Space Societies** William Sims Bainbridge, 2018-06-09

At the intersection of astronautics, computer science, and social science, this book introduces the challenges and insights associated with computer simulation of human society in outer space, and of the dynamics of terrestrial enthusiasm for space exploration. Never before have so many dynamic representations of space-related social systems existed, some deeply analyzing the logical implications of social-scientific theories, and others open for experience by the general public as computer-generated virtual worlds. Fascinating software ranges from multi-agent artificial intelligence models of civilization, to space-oriented massively multiplayer online games, to educational programs suitable for schools or even for the world's space exploration agencies. At the present time, when actual forays by humans into space are scarce, computer simulations of space societies are an excellent way to prepare for a renaissance of exploration beyond the bounds of Earth.

**Human Spaceflight** Louis Friedman,2015-11-15 Mars, the red planet named for the god of war, a mysterious dust-ridden place, is most like Earth in its climate and seasons. Of all the possible destinations in space to travel, Mars is the most likely for humans to reach. According to esteemed scientist Louis Friedman, it may be the only destination outside the moon to ever see human footprints. Far from diminishing our future in space, Human Spaceflight lays out a provocative future for human space travel. The noted aerospace engineer and scientist says that human space exploration will continue well into the future, but space travel by humans will stop at Mars. Instead, nanotechnology, space sails, robotics, biomolecular engineering, and artificial intelligence will provide the vehicles of the future for an exciting evolution not just of space travel but of humankind. Friedman has worked with agencies around the globe on space exploration projects to extend human presence beyond Mars and beyond the solar system. He writes that once we accept Mars as the only viable destination for humans, our space program on planet Earth can become more exciting and more relevant. Mars, he writes, will take hundreds, even thousands, of years to settle. During that time, humans and all our supporting technologies will evolve, allowing our minds to be present throughout the universe while our bodies stay home on Earth and Mars.

The Century of Space Science J.A. Bleeker,Johannes Geiss,M.

Huber,2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field. Hence, at this point in history we are in a unique position to gain first-hand insight into the field and its development. To this end, *The Century of Space Science*, a scholarly, authoritative, reference book presents a chapter-by-chapter retrospective of space science as studied in the 20th century. The level is academic and focuses on key discoveries, how these were arrived at, their scientific consequences and how these discoveries advanced the thoughts of the key players involved. With over 90 world-class contributors, such as James Van Allen, Cornelis de Jager, Eugene Parker, Reimar Lüst, and Ernst Stuhlinger, and with a Foreword by Lodewijk Woltjer (past ESO Director General), this book will be immensely useful to readers in the fields of space science, astronomy, and the history of science. Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection.

*Into the Blue: American Writing on Aviation and Spaceflight* Joseph J. Corn,2011-10-13 *Into the Blue* revisits the remarkable trajectory of Americans in air and space, gathering sixty of the best eyewitness and participant narratives from Benjamin Franklin's letters on the first hot air balloons to Chris Jones's account of being marooned on the International Space Station. Here are those who made flight happen: Orville and Wilbur Wright, self-taught

pioneers whose homespun invention stunned the world; World War I ace Eddie Rickenbacker, whose memoirs (excerpted here for the first time in unedited form) describe the frightening novelties of aerial combat; and daredevils like Texas barnstormer Slats Rodgers and test pilot Jimmy Collins. Ernest Hemingway offers a vivid dispatch on a 1922 flight over France, and Gertrude Stein muses on the look of America from the air; Charles A. Lindbergh and Amelia Earhart narrate their groundbreaking transatlantic flights; Ralph Ellison reflects on the experience of African American airmen at Tuskegee; William F. Buckley Jr. recounts his mishaps as an amateur pilot; Wernher von Braun envisions a space station of the future, while astronauts John Glenn, Michael Collins and Buzz Aldrin provide firsthand recollections of the conquest of space. Here too, among many other subjects, are scenes and episodes in the development of commercial aviation, from the hiring of the first stewardesses and the high stress lives of air traffic controllers to the new ubiquity of what Walter Kirn calls Airworld. A thirty-two-page insert offers photographs, some previously unpublished, of the writers and their crafts.

Popular Science ,2007-08 Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

Dynamic Secularization William Sims Bainbridge,2017-05-11 This book

discusses secularization, arguing that it may be more complex and significant than is generally recognized. Using a number of online exploration methods, the author provides insights into how religion may be changing, and how information technology might be energized in this process. Working from the premise that the relationship between science and religion is complex, the author demonstrates that while science has contradicted some specific religious beliefs, science itself may have been facilitated by beliefs formed many centuries ago. Science assists engineers in the development of powerful new technologies, and asserts that the universe is based on a set of fundamental principles that can be understood by humans through the assistance of mathematics. The challenging ideas discussed will benefit readers through sharing a variety of Internet-based research methods and cultural discoveries. The book provides a balance between quantitative methods, illustrated by 24 tables of statistics, and qualitative methods, illustrated by 30 screenshots of computer-generated virtual worlds. Analysis interweaves with description, creating a sense of involvement in the experience of exploring online realities at the same time as radical insights are shared.

**Spaceflight in the Shuttle Era and Beyond** Valerie Neal,2017-06-27 An exploration of the changing conceptions of the Space Shuttle program and a call for a new vision of spaceflight. The thirty years of Space Shuttle flights saw contrary changes in American visions of space. Valerie Neal, who has spent much of her career examining the Space Shuttle program, uses this iconic vehicle to question over four decades' worth of thinking about, and struggling with, the meaning of human spaceflight. She examines the ideas, images, and icons that emerged as NASA, Congress, journalists, and others sought to communicate rationales for, or critiques of, the Space Shuttle missions. At times concurrently, the Space Shuttle was billed as delivery truck and orbiting science lab, near-Earth station and space explorer, costly disaster and pinnacle of engineering success. The book's multidisciplinary approach reveals these competing depictions to examine the meaning of the spaceflight enterprise. Given the end of the Space Shuttle flights in 2011, Neal makes an appeal to reframe spaceflight once again to propel humanity

forward. "Neal may be the one person who knows the space shuttle program better than the astronauts who flew this iconic vehicle. Her book casts new light on the program, exploring its cultural significance through a thoughtful analysis. As one who lived this history, I gained much from her broader perspective and deep insights."—Kathryn D. Sullivan, retired NASA astronaut and former Administrator of the National Oceanic and Atmospheric Administration "A much needed look at how to create a cultural narrative for human spaceflight that resonates with millennials rather than the Apollo generation. Quite valuable."—Marcia Smith, Editor, SpacePolicyOnline.com
