Ambient Diagnostics Yang Cai, 2014-12-01 *Ambient Diagnostics* addresses innovative methods for discovering patterns from affordable devices, such as mobile phones, watches, cameras, and game interfaces, to interpret multimedia data for personal health monitoring and diagnosis. This is the first comprehensive textbook on multidisciplinary innovations in affordable healthcare—from sensory fusion, pattern detection, to classification. *Connecting the Dots* The material in this book combines sensing, pattern recognition, and visual design, and is divided into four parts, which cover fundamentals, multimedia intelligence, pervasive sensors, and crowdsourcing. The author describes basic pattern discovery models, sound, color, motion and video analytics, and pattern discovery from games and social networks. Each chapter contains the material's main concepts, as well as case studies, and extensive study questions. Contains overviews about diagnostic sensors on mobile phones Reflects the rapidly growing platforms for remote sensing, gaming, and social networking Incorporates cognitive tests such as fatigue detection Includes pseudo code and sample code Provides vision algorithms and multimedia analytics Covers Multimedia Intelligence Extensively

Ambient Diagnostics includes concepts for ambient technologies such as point-and-search, the pill camera, active sensing with Kinect, digital human labs, negative and relative feature spaces, and semantic representations. The book also introduces methods for collective intelligence from online video games and social media.

Vehicle/Tire/Road Dynamics Tan Li, 2022-11-24 Vehicle/Tire/Road Dynamics: Handling, Ride, and NVH presents the connection between NVH and conventional vehicle dynamics where both tire and road play a key role. In this book, there is a chapter for handling dynamics that provides an introduction to ride dynamics and a chapter for ride dynamics that provides an introduction to NVH, presenting better coherence and synergy between these major areas of vehicle/tire dynamics. Accompanying the fundamental theories, case studies are given to facilitate comprehension. In addition to the experimental implementations, the state-of-the-art approaches to simulating vehicle/tire dynamics are presented from the viewpoint of both industry and academia. This new book bridges the gap for experts in tire or pavement NVH (also tire-pavement interaction noise) and those who are experts in vehicle dynamics. Conventional vehicle dynamics (e.g., handling/braking/cornering) is focused on low-frequency performance while NVH (noise/vibration/harshness) is focused on high-frequency performance. There is also another area called ride (comfort/stability) which focuses on mid-frequency. Presents a closed loop system for vehicle dynamics, covering handling, ride and NVH. Provides insights into how intelligent tires will enhance autonomous vehicle control and optimize multiple performances, especially for electric vehicles. Demonstrates how pavement characteristics could greatly influence vehicle handling/ride/NVH and improve/balance these performances.

Mastering the Shakespeare Audition Donna Soto-Morettini,2016-08-25 Mastering the Shakespeare Audition is a handbook for actors of all ages and experience, whether auditioning for a professional role or a place in drama school. Many actors have no idea where to start in preparing a Shakespeare

audition speech. Yet many auditions – professional or drama school – require a well-delivered classical monologue. Mastering the Shakespeare Audition shows performers how to focus rehearsal time and spend it well. Starting with how to choose a piece that plays to each actor's particular strength, casting director Donna Soto-Morettini provides a series of timed exercises and rehearsal techniques that will allow any actor to feel confident and truly prepared for performance – in sessions totalling just 35 hours. Offering progressive and clearly marked exercises detailing the time necessary both to read and complete the work, Mastering the Shakespeare Audition also features extended exercises for those with more time to spare, allowing a deeper understanding of the ideas and skills involved.

Advances in Speech and Music Technology Anupam Biswas, Emile Wennekes, Alicja Wiczorkowska, Rabul Hussain Laskar, 2023-01-01 This book presents advances in speech and music in the domain of audio signal processing. The book begins with introductory chapters on the basics of speech and music, and then proceeds to computational aspects of speech and music, including music information retrieval and spoken language processing. The authors discuss the intersection in the field of computer science, musicology and speech analysis, and how the multifaceted nature of speech and music information processing requires unique algorithms, systems using sophisticated signal processing, and machine learning techniques that better extract useful information. The authors discuss how a deep understanding of both speech and music in terms of perception, emotion, mood, gesture and cognition is essential for successful application. Also discussed is the overwhelming amount of data that has been generated across the world that requires efficient processing for better maintenance, retrieval, indexing and querying and how machine learning and artificial intelligence are most suited for these computational tasks. The book provides both technological knowledge and a comprehensive treatment of essential topics in speech and music

processing.
