Fintech and Cryptocurrency Mohd Naved,V. Ajantha Devi,Aditya Kumar Gupta,2023-12-07 FINTECH and CRYPTOCURRENCY Dive into the world of fintech and cryptocurrency through the engaging perspectives of this diverse group of authors and uncover the intricate connections between technology, finance, and cryptocurrency that make this a must-have for anyone intrigued by the future of digital society. Digital currencies, decentralization of money, and the growth of new technologies like blockchain, the Internet of Things, and machine learning have produced new opportunities and difficulties for banking and finance, as well as users of these services in electronic commerce. New banking and finance technologies may improve operational efficiency, risk management, compliance, and client pleasure, but they can decrease barriers and introduce new concerns, such as cybersecurity risk. Cryptocurrencies with smart contracts for payments and trading, as well as AI systems with adaptive algorithms that allow picture and speech recognition, expert judgement, group categorization, and forecasting in a variety of fields, are instances of increased automation. Simultaneously, the potentials pose risks and raise regulatory concerns. The rise of blockchain technology and its widespread use have had a significant impact on the operation and management of digital systems. At the same time, researchers and practitioners have paid close attention to digital finance. Blockchain's first applications were limited to the production of digital currency, but it has now been expanded to include financial and commercial applications. Innovative digital finance has had a huge impact on business and society since it has been extensively adopted by businesses and consumers. As a result, the goal of this edited book is to expand and deepen our knowledge of the business possibilities of novel blockchain and digital financial applications.

HAPPINGINEERING Ralf J. Hosse,2020-01-24 HAPPINGINEERING will draw your attention to what really matters in life. It will remind you of simple things we shouldn't lose sight of. It will be your companion helping you to see a clearer picture of your life, to understand life as a whole, to define where you are and where you want to go. HAPPINGINEERING will raise your awareness of the variety life has to offer and invites you to be a part of it. Life is never perfect. In fact, it's perfectly normal that some things in your life go well and others don't. Likewise, there's no guarantee for happiness. The truth is, however, that there's a lot you can do that chances are pretty good that you will lead a happy, fulfilled, and sustainable life.

Time Management for Academic Impact Kate Ames,2019-10-16 Academic staff are appointed to teach, research, consult, manage, and learn new technology amidst increasing pressure and dissatisfaction with workloads. They must learn new techniques to engage students who study across different modes, often juggling life and work. This book aims to blend good teaching practice with good time management skills to help academics feel more productive, confident, and in control of their 'teaching side'. Time Management for Academic Impact explores the relationship between academic workload models, identity, and worldview with our approach to teaching (and research). Using the analogy of life on a treadmill in the midst of tornadoes, it identifies effective, simple, research-informed strategies that will reduce time spent on activities that have low, minimal, or individual impact. Outlining the unique nature of academic work, this book invites the reader to reflect on their own contractual model and helps them to identify 'time thieves', to implement strategies to address these, and to create 'time boundaries' - reclaiming control of their own time. This approach will result in more satisfied students, increased research output, and more time for academics to do the work they want to do. This book will be of great use to university academics and faculty staff balancing research and teaching loads. It will also help vocational and community college educators and professionals working in part time, casual, or contract academic roles.

Professional Android Sensor Programming Greg Milette,Adam Stroud,2012-05-18 Learn to build human-interactive Android apps, starting with device sensors This book shows Android developers how to exploit the rich set of device sensors—locational, physical (temperature, pressure, light, acceleration, etc.), cameras, microphones, and speech recognition—in order to build fully human-interactive Android applications. Whether providing hands-free directions or checking your blood pressure, Professional Android Sensor Programming shows how to turn possibility into reality. The authors provide techniques that bridge the gap between accessing sensors and putting them to meaningful use in real-world situations. They not only show you how to use the sensor related APIs effectively, they also describe how to use supporting Android OS components to build complete systems. Along the way, they provide solutions to problems that commonly occur when using Android's sensors, with tested, real-world examples. Ultimately, this invaluable resource provides in-depth, runnable code examples that you can then adapt for your own applications. Shows experienced Android developers how to exploit the rich set of Android smartphone sensors to build human-interactive Android apps Explores Android locational and physical sensors (including temperature, pressure, light, acceleration, etc.), as well as cameras, microphones, and speech recognition Helps programmers use the Android sensor APIs, use Android OS components to build complete systems, and solve common problems Includes detailed, functional code that you can adapt and use for your own applications Shows you how to successfully implement real-world solutions using each class of sensors for determining location, interpreting physical sensors, handling images and audio, and recognizing and acting on speech Learn how to write programs for this fascinating aspect of mobile app development with Professional Android Sensor Programming.

The Last Lecture Randy Pausch,2008-04-08 After being diagnosed with terminal cancer, a professor shares the lessons he's learned—about living in the present, building a legacy, and taking full advantage of the time you have—in this life-changing classic. We cannot change the cards we are dealt, just how we play the hand. —Randy Pausch A lot of professors give talks titled The Last Lecture. Professors are asked to consider their demise and to ruminate on what matters most to them. And while they speak, audiences can't help but mull over the same question: What wisdom would we impart to the world if we knew it was our last chance? If we had to vanish tomorrow, what would we want as our legacy? When Randy Pausch, a computer science professor at Carnegie Mellon, was asked to give such a lecture, he didn't have to imagine it as his last, since he had recently been diagnosed with terminal cancer. But the lecture he gave—Really Achieving Your Childhood Dreams—wasn't about dying. It was about the importance of overcoming obstacles, of enabling the dreams of others, of seizing every moment (because time is all you have . . . and you may find one day that you have less than you think). It was a summation of everything Randy had come to believe. It was about living. In this book, Randy Pausch has combined the humor, inspiration and intelligence that made his lecture such a phenomenon and given it an indelible form. It is a book that will be shared for generations to come.

Developing and Leading Emergence Teams Peter A.C. Smith, Tom Cockburn, 2016-03-10 Developing and Leading Emergence Teams describes a future business landscape that seems to be complicated, complex and chaotic, in almost equal measures. The variety and diversity of the environments within which large organizations will be seeking to operate, require a similar variety of systems, process and structures if they are to respond successfully to emerging opportunities. The established models of teamworking (matrix, cross-functional or transdisciplinary) can all adapt to this new environment but will only do so if the culture, leadership and management style of the business enables this. The authors describe a model of emergence teams; high-trust teams that exhibit exceptional affinity for knowledge sharing, sense making, and consensus building. They then explore the specifics of leading such a team, how the team leader should: design the team; interact and facilitate the team's development; understand the personal nature of each of the team members and the overall emotional regime that will affect trust, commitment and motivation. Peter Smith and Tom Cockburn draw on research and detailed case examples to provide techniques your organization can adopt in order to build and support the various teams capable of addressing complexity.
