**Bipolar Sagacity Volume 11** Thomas D. Sharts M.ED,2022-05-23 Bipolar Sagacity Volume 11 continues with the theme of the first book: Bipolar Sagacity and underscores the profound bipolar spiritual, social, psychological and vocational struggles a person of introspection experiences as he/she travels throughout the stages of the adult life cycle. This life, both past and present, witnesses to the fact that many people of astute perceptual skills, religious faith, and intellectual knowledge live lives of great contradictions - those bipolar experiences that challenge the very essence of sanity. Yet in truth, the commentary in this book - whether ruminations, lamentations, exhortations, questions, sayings or aphorisms - encapsulates what it means to be human as a cognizant and vibrant living adult; whether as celebrated through supplications, acknowledgement of thanks, discovered truths or founded wisdom, or by experiencing all the human fallibilities and negative perceptions associated with powerful emotional states such as confusion, fear, anger, jealousy, etc.

Naval Firepower Norman Friedman, 2013-08-20 An in-depth history of naval battleship firepower from before World War I to the end of World War II, by America's leading naval analyst. For more than half a century, the big gun was the arbiter of naval power, but it was useless if it could not hit the target fast and hard enough to prevent the enemy doing the same. Because the naval gun platform was itself in motion, finding a "firing solution" was a significant problem exacerbated when gun sizes increased, fighting ranges lengthened, and seemingly minor issues like wind velocity had to be considered. To speed up the process and eliminate human error, navies sought a reliable mechanical calculation. This heavily illustrated book outlines for the first time in layman's terms the complex subject of fire-control, as it dominated battleship and cruiser design from before World War I to the end of the dreadnought era. Covering the directors, range-finders, and electro-mechanical computers invented to solve the problems, author Norman Friedman explains not only how the technology shaped (and was shaped by) the tactics involved, but also analyzes their effectiveness in battle. His examination of the controversy surrounding Jutland and the relative merits of competing fire-control systems draws surprising conclusions. He also reassesses many other major gun actions, such as the battles between the Royal Navy and the Bismarck, and the U.S. Navy actions in the Solomons and at Surigao Strait. All major navies are covered, and the story concludes at the end of World War II with the impact of radar.
