**Spice** Jack Turner,2008-12-10 In this brilliant, engrossing work, Jack Turner explores an era—from ancient times through the Renaissance—when what we now consider common condiments were valued in gold and blood. Spices made sour medieval wines palatable, camouflaged the smell of corpses, and served as wedding night aphrodisiacs. Indispensable for cooking, medicine, worship, and the arts of love, they were thought to have magical properties and were so valuable that they were often kept under lock and key. For some, spices represented Paradise, for others, the road to perdition, but they were potent symbols of wealth and power, and the wish to possess them drove explorers to circumnavigate the globe—and even to savagery. Following spices across continents and through literature and mythology, *Spice* is a beguiling narrative about the surprisingly vast influence spices have had on human desire. Includes eight pages of color photographs. One of the Best Books of the Year: Discover Magazine, The Christian Science Monitor, San Francisco Chronicle

The SPICE Book Andrei Vladimirescu,1994 This new book, written by Andre Vladimirescu, who was instrumental in the development of SPICE at the University of California Berkeley, introduces computer simulation of electrical and electronics circuits based on the SPICE standard. Relying on the functionality first supported in SPICE2 that is now supported in all SPICE programs, this text is addressed to all users of electrical simulation. The approach to learning circuit simulation is to interpret simulation results in relation to electrical engineering fundamentals; the book asks the student to solve most circuit examples by hand before verifying the results with SPICE. Addressed to both the SPICE novice and the experienced user, the first six chapters provide the relevant information on SPICE functionality for the analysis of linear as well as nonlinear circuits. Each of these chapters starts out with a linear example accessible to any new user of SPICE and proceeds with nonlinear transistor circuits. The latter part of the book goes into more detail on such issues as functional and hierarchical models, distortion analysis, basic algorithms in SPICE and related options parameters, and, how to direct SPICE to find a solution when it does not converge to a solution. The approach emphasizes that SPICE is not a substitute for knowledge of circuit operation but a complement. The SPICE Book is different from previously published books in the approach of solving circuit problems with a computer. The solution to most circuit examples is sketched out by hand first and followed by a SPICE verification. For more complex circuits it is not feasible to find the solution by hand but the approach stresses the need for the SPICE user to understand the results. Readers gain a better comprehension of SPICE thanks to the importance placed on the relation between EE fundamentals and computer simulation. The tutorial approach advances from the hand solution of a circuit to SPICE verification and simulation results interpretation. This book teaches the approach to electrical circuit simulation rather than a specific simulation program. Examples are simulated alternatively with SPICE2, SPICE3 or PSPICE. Accurate descriptions, simulation rationale and cogent explanations make this an invaluable reference.

The Spice Merchant's Daughter Christina Arokiasamy,2008 It was the aroma. The exotic scent of spices: rich, alluring, and almost magical. A scent that would sometimes overpower the freshness in the air and sometimes subtly mingle with it to create a tantalizing bouquet. A scent that would always bring me back to my childhood. Growing up enveloped in the aromas of her mother's spice stall in Kuala Lumpur, Christina Arokiasamy developed an artist's sense of how to combine and use spices in traditional and innovative ways. In *The Spice Merchant's Daughter*, she shares her family's spice secrets, expertly guiding and enticing home cooks to enliven their repertoires. Christina weaves evocative stories of cooking at her mother's side with real-world practical advice gleaned not only from working in professional kitchens but also from tackling the nightly task of getting a home-cooked dinner on the table for her family of four using American ingredients. She shows how easy it is to build layers of complex flavor to create 100 tempting Southeast Asian-inspired recipes, including Lemon Pepper Wings, Spicy Beef Salad, Steamed Snapper with Tamarind-Ginger Sauce, Cardamom Butter Rice with Sultanas, and Coconut Flan Infused with Star Anise. She unlocks the transformative power of homemade spice rubs, curry pastes, and sauces, as well as chutneys and pickles, enabling home cooks to bring new depth and dimension to their favorite dishes. With lush photography and a chapter identifying and defining key pantry ingredients and aromatics, *The Spice Merchant's Daughter* both inspires and empowers, awakening the senses and unlocking the alluring world of spices.

*One Spice, Two Spice* Floyd Cardoz,Jane Daniels Lear,2006-10-24 Floyd Cardoz, chef and co-owner of New York City's Tabla restaurant, is one of the most exciting innovators working behind a stove today. And now, for the first time, he shares the extraordinary recipes that have established his reputation. In them Cardoz is able to make the quantum leap between the American palate and his taste memories—the food of his childhood in Bombay and Goa. The collection, *One Spice, Two Spice*, is an amalgam of two cuisines by a man who has mastered the flavors of each. This volume of more than 140 recipes is a gift to all home cooks who enjoy the flavors of India but are intimidated by the unusual and numerous spices required to

prepare these dishes. Here, Cardoz renders those spices user friendly in a down-to-earth primer and glossary. Then, in the recipe notes, he shows you how to easily integrate these new flavors into everyday meals and dinner-party fare. The techniques—sautéing, panfrying, braising, poaching, and roasting—are not new. The results, however, are astonishing. Imagine crisp panfried black pepper shrimp, meaty sea scallops seared and served in a satiny sweet-sour glaze, asparagus and morels sautéed in a spicy blend of shallot, ginger, and chile—all of which can be made in no time flat. Other recipes—steak rubbed with crushed peppercorns and coriander, cumin, and mustard seeds, duck bathed in an aromatic orange curry, lamb meatballs filled with an herbaceous combination of fresh figs, cilantro, and mint and then napped with a lush, lustrous green sauce—may require more marinating or cooking time, but the trade-off is Cardoz's three-star-restaurant cooking at home. One Spice, Two Spice is more than a cookbook. It is a gateway to a different way of thinking about the food on your plate, and it brings Indian flavors into the modern American repertoire.

**The Designer's Guide to Spice and Spectre®** Ken Kundert,2006-04-11 Engineering productivity in integrated circuit product design and development today is limited largely by the effectiveness of the CAD tools used. For those domains of product design that are highly dependent on transistor-level circuit design and optimization, such as high-speed logic and memory, mixed-signal analog-digital interfaces, RF functions, power integrated circuits, and so forth, circuit simulation is perhaps the single most important tool. As the complexity and performance of integrated electronic systems has increased with scaling of technology feature size, the capabilities and sophistication of the underlying circuit simulation tools have correspondingly increased. The absolute size of circuits requiring transistor-level simulation has increased dramatically, creating not only problems of computing power resources but also problems of task organization, complexity management, output representation, initial condition setup, and so forth. Also, as circuits of more complexity and mixed types of functionality are attacked with simulation, the spread between time constants or event time scales within the circuit has tended to become wider, requiring new strategies in simulators to deal with large time constant spreads.
