Discovering Stained Glass in Detroit Nola Huse Tutag, Lucy Hamilton, 1987 The Detroit area boasts many fine examples of stained glass representing a variety of periods and styles. The European stained glass collection at the Detroit Institute of Arts ranks amongst the most important in the United States. Churches and synagogues contain panels from notable designers and studios, and exquisite glass can also be found in many public and private buildings like the Detroit Public Library, Cranbrook House, the Guardian Building, and the David Whitney, Jr., house. *Discovering Stained Glass in Detroit* contains sixty examples of the area's stained glass treasures, each stunningly presented in full color. Author Nola Huse Tutag accompanies each illustration with an explanatory text. Line drawings illustrate the buildings where the panels are located. The windows represent works by designers such as Louis Comfort Tiffany, Charles J. Connick, Frank Lloyd Wright, Henry Matisse, as well as those from European and American studios.

Theological Stains Assaf Shelleg,2020 Theological Stains traces the growth

of art music in Israel from the mid twentieth century to the turn of the twenty-first. In a riveting and provocative account, Assaf Shelleg explores the theological grammar of Zionism and its impact on the art music written by emigrant and native composers grappling with biblical redemptive promises and diasporic patrimonies. Unveiling the network that bred territorial nationalism and Hebrew culture, Shelleg shows how this mechanism infiltrated composers' work as much as it triggered less desirable responses from composers who sought to realize to the non-territorial Diasporic options Zionism has renounced. In the process compositional aesthetics gets stained by the state's nationalization of the theological, by diasporism that refuses redemption, and by Jewish musical traditions that permeated inaudibly to compositions written throughout the second half of the twentieth century. Accompanying this rich and dramatic story are equivalent developments in modern Hebrew literature and poetry alongside vast and previously unstudied archival sources. The book is also lavishly illuminated with 135 music examples that render it an incisive guide to fundamental chapters in modern and late modern art music--

Enzinger and Weiss's Soft Tissue Tumors Sharon W. Weiss, John R. Goldblum, Andrew L. Folpe, 2007-11-29 Here's your ideal reference on the diagnosis of tumors of the skeletal muscles, connective tissue, fat, and related structures. No other textbook matches its scope and depth of coverage in this complex and challenging area of surgical pathology, and no other text contains as much practical information on differential diagnosis. Throughout, microscopic findings are correlated with the latest developments in molecular biology, cytogenetics, and immunohistochemistry to provide you with a comprehensive and integrated approach to evaluation and diagnosis. Almost 2,000 superb illustrations capture the appearance of a complete range of entities and help relate these to their specific classifications. The result is an essential resource for all who diagnose and treat soft tissue tumors. Get all the assistance you need, in one reference, to effectively diagnose these often complex and challenging entities. Confirm your diagnostic suspicions by comparing your findings to nearly 2,000 full-color, high-quality illustrations representing the complete range of soft tissue tumors. Access all of the essential clinical and prognostic data necessary to

formulate complete sign-out reports. Make optimal use of relevant ancillary techniques such as immunohistochemistry and cytogenetics. Make rapid and effective decisions with the aid of extensive algorithms, and access information at a glance with abundant tables and graphs. Solve difficult diagnostic dilemmas and avoid pitfalls with a special emphasis on overcoming these challenges. Find answers quickly thanks to a new color-coded page design as well as a consistent approach to every entity. Download all of the illustrations from the book for use in electronic presentations with the new bonus CD-ROM. Apply the latest knowledge on FNA biopsy, molecular biology, and cytogenetics. Understand complex molecular events more fully thanks to new conceptual line drawings. Easily distinguish between entities that have a similar appearance with the assistance of new tables that correlate histologic, immunohistochemical, and molecular biologic findings. Navigate through the book quickly thanks to new summary outlines at the beginning of each chapter.

Stained glass and the Victorian Gothic revival Jim Cheshire, 2017-06-01
Stained glass reached the height of its popularity in the Victorian period.

But how did it become so popular and who was involved in this remarkable revival? The enthusiasm for these often exquisite pieces of artwork spread from specialist groups of antiquarians and architects to a much wider section of the Victorian public. By looking at stained glass from the perspective of both glass-painter and patron, and by considering how stained glass was priced, bought and sold, this enlightening study traces the emergence of the market for stained glass in Victorian England. Thus it contains new insights into the Gothic Revival and the relationship between architecture and the decorative arts. Beautifully illustrated with colour plates and black and white illustrations, this book will be valuable to those interested in stained glass and the wider world of Victorian art.

Transplantation in Hematology and Oncology II W.E. Berdel, H. Jürgens, Thomas Büchner, J. Ritter, J. Kienast, J. Vormoor, 2002-09-19 Hematopoietic stem cell and immune cell transplantation has continued as a promising therapeutic alternative and a fascinating area of cell biology as well as a field of persistent procedural problems. This explains why substantial parts of basic research on cell growth and differentiation, immune tolerance and antitumor effects, gene transfer, minimal residual disease and supportive care have settled around clinical transplantation in hematology and oncology. This second volume again updates the current role of allogeneic and autologous transplantation in leukemias, lymphomas and solid cancers, including cont-

versial strategies and novel experimental approaches. In particular, cellular immune therapy, new conditioning strategies, mismatched donor transplantation, updated clinical transplantation, antiangiogenesis and strategies against fungal infections are focused upon. Outstanding representatives of leading groups guarantee first-hand information and indicate how we can work and cooperate more effectively to the benefit of our patients. The editors are indebted to the Gesellschaft zur Bekämpfung der Krebskrankheiten Nordrhein-Westfalen for a substantial support of the publication. They also acknowledge the major contribution of Beate Kosel as coordinator of the editorial work.
