Robot Intelligence Technology and Applications 2 Jong-Hwan Kim,Eric T .

Matson,Hyun Myung,Peter Xu,Fakhri Karray,2014-03-21 We are facing a new technological challenge on how to store and retrieve knowledge and manipulate intelligence for autonomous services by intelligent systems which should be capable of carrying out real world tasks autonomously. To address this issue, robot researchers have been developing intelligence technology (InT) for "robots that think" which is in the focus of this book. The book covers all aspects of intelligence from perception at sensor level and reasoning at cognitive level to behavior planning at execution level for each low level segment of the machine. It also presents the technologies for cognitive reasoning, social interaction with humans, behavior generation, ability to cooperate with other robots, ambience awareness and an artificial genome that can be passed on to other robots. These technologies are to materialize cognitive intelligence, social intelligence, behavioral intelligence, collective intelligence, ambient intelligence and genetic intelligence. The book aims at serving researchers and practitioners with a timely dissemination of the recent progress on robot intelligence technology and its applications, based on a collection of papers presented at the at the 2nd International Conference on Robot Intelligence Technology and Applications (RiTA), held in Denver, USA, December 18-20, 2013.

Norms of Word Association Leo Postman,Geoffrey Keppel,2014-05-10 Norms of Word Association contains a heterogeneous collection of word association norms. This book brings together nine sets of association norms that were collected independently at different times during a 15-year period. Each chapter is a self-contained unit. The order in which the norms are presented is arbitrary, although an attempt is made to group together norms that seem to belong together. The 1952 Minnesota norms are presented first, due to age and in recognition of the fact that a number of the norms that follow are direct outgrowths of this work. The next three norms in this collection are responses to the Russell-Jenkins stimuli obtained from subjects representing different linguistic communities. A summary of association norms collected from British and Australian subjects are reported along with association norms from German and French college students and French

workmen. Four sets of norms that are not directly related to the 1952 Minnesota collection are included. The text will be of interest to historians and researchers in the field of verbal learning and verbal behavior.

Total Knee Arthroplasty Johan Bellemans,Michael D. Ries,Jan M.K. Victor,2005-08-01
Take away my knee pain and give me better motion. This is what the arthritic patient expects from a Total Knee Arthroplasty (TKA). By virtue of standardization of the TKA procedure, surgeons can nowadays solve the pain issue for the majority of the patients. Restoration of function is a goal of a different order and forms the scope of this book. The editors confronted today's leading knee surgeons with the limitations of current surgical techniques and technology. They challenged them to define new thresholds of functional capacity after Total Knee Arthroplasty. A Guide to Get Better Performance in TKA describes the cutting edge in surgical techniques, prosthetic design and achievement of excellent function for these patients.
