

# STARLIGHT FIND STARS AND CONSTELLATIONS

MICHAEL DRISCOLL

📖 **How to Identify the Stars** Willis Isbister Milham, 1909

📖 **Wishing on a Star** Fran Lee, 2014-11-12 If you go outside on a clear night, you can't help yourself. Your head tilts back, your eyes rise up, and you find yourself gazing at the stars . . . WOW! From the beginning of time, people have admired the night sky's beauty. The night sky is our oldest picture book, and *Wishing on a Star* retells some of these stories from around the world in simple language that kids can understand. *Wishing on a Star* also includes lots of fun activities that celebrate the stars. Learn how to make a twinkling thaumatrope, fly a starry kite, and act in your own constellation play. Star maps and stargazing tips show how to find the constellations, and cool science facts teach more about the stars.

📖 **How to Identify the Stars** Willis I. Milham, 2017-03-05 From the introduction. The ability to recognize the more brilliant stars and to locate the more conspicuous constellations or star groups, is both an interesting and a useful acquirement. The number of people who have a real interest in popular astronomy and a fair acquaintance with the stars and constellations is steadily increasing and they find real pleasure in their information. To the meteorologist who would make observations of the position of the streamers of the Aurora Borealis or locate the place of the appearance and disappearance of bright meteors, a knowledge of the stars and constellations is absolutely necessary. The best way to locate the position of an auroral streamer without the use of apparatus is to observe the stars between which and over which it extends. Similarly the point of appearance and disappearance of a meteor has been definitely determined if the nearest star in each case has been noted. If great exactness is desired, the angular distance and direction of the point in question from the nearest star may be estimated. Whenever an object is thus located by means of the stars, the exact time of observation and the place of observation (latitude, longitude, and elevation) must also be stated. From such observations made at two, preferably more, stations, the distance, height, and direction of an auroral display, and the distance, height, direction of motion, velocity of motion, and orbit in space of a meteor may be determined by computation. The purpose of the constellation tracings and the descriptive material here given, is to serve as a guide in taking the first steps in learning the stars and constellations and also to point the way to the acquisition of further information on the part of those who desire it. The method here followed and the material presented is

ESSENTIALLY THE SAME AS THAT USED IN THE COURSE ON DESCRIPTIVE ASTRONOMY IN WILLIAMS COLLEGE.
