Die Neuauflage wurde aktualisiert und um einen Abschnitt Programmierung erweitert: Programmieren der Mikrocontroller, Programmieren in C++ und Programmieren in Java.

Computer Assisted Radiology / Computergestützte Radiologie AMK Berlin, 2013-03-09 New imaging technology and more sophisticated image processing systems will have a profound effect on those areas of medicine which are concerned with imaging for diagnosis and therapy planning. Digitally formatted data will form the basis of an increasing number of medical imaging modalities. Before the diagnostic imaging department of the future will largely be digital, many problems have still to be solved as regards image quality, costs, and ease of use. The computer and other information science derived methods will contribute towards solving many of the problems in these areas. It is widely expected that there will be an information science derived evolution in imaging for radiology and related departments. Computer assistance may be applied to image generation, e.g. CT, MRI, DR and DSR, storing and transferring of images, and viewing, analysing and interpreting of images. The application of computers to these activities (which characterise radiological departments), may be defined as Computer Assisted Radiology (CAR) . In the main, CAR will promote the transition from analog imaging systems to digital systems, integration of digital imaging modalities through Picture Archiving and Communication Systems (PACS') and the graduated employment of Medica~ Work Stations (MWS) for diagnosis and therapy planning. It will transfer geographically, organisationally and/or mentally isolate imaging activities towards fully integrated multi-imaging modality diagnostic departments. This development will have a considerable impact on patient management, on the medical profession and on the health care system.

Technischer Einsatz von Personal Computern (PC) am Beispiel der Schweißtechnik. Zerebrale Links-Rechts-Asymmetrie: Struktur, Funktion, Entstehung. Metallaktivierung am Beispiel Titan: Von den morphologischen Grundlagen zu Anwendungen in der Wirkstoffsynthese Ulrich Dilthey,2013-11-21 Die wissenschaftliche Suche nach strukturellen Korrelaten lokalisierter Hirnfunktionen war bis vor zwanzig Jahren auf das Naturexperiment herd förmiger Hirnerkrankungen angewiesen. Der wesentliche Zugang waren dabei pathoanatomische Studien an Hirnen Verstorbener, die zu Lebzeiten durch umschriebene Verletzungen oder Schlaganfälle neurologische Ausfälle entwickelt hatten (Broca, 1863; Wernicke, 1874; Kleist, 1934; Luria, 1966). Störungen wurden also ihren anatomischen Quellen zugeordnet. Die Beziehung zwischen gesunder Hirnanatomie und normaler Funktion hat sich dagegen erst in jüngerer Zeit vor allem durch die Magnetresonanz Tomographie und Positronenemissions-Tomographie der Untersuchung erschlossen. Wie schon im letzten Jahrhundert hat dabei die Frage der Art der Beziehung zwischen anatomischer und funktioneller Links-Rechts-Asymmetrie des Gehirns (Hemisphärendominanz) eine besonders aufschlußreiche Rolle gespielt. Anatomische und funktionelle Hemisphärenasymmetrie Ausgangspunkt unserer eigenen Arbeiten zu den hirnstrukturellen Korrelaten hemisphärischer Dominanz waren ursprüngliche Überlegungen von Flechsig (1908), von Economo & Horn (1930) und Geschwind & Levitsky (1968). Sie alle hatten eine funktionelle Bedeutung der makroskopisch gut sichtbaren Links-Rechts-Asymmetrie eines Areals auf der hinteren Supratemporalfläche, des sogenannten Planum temporale diskutiert, konnten diese Hypothese an ihren Hirnpräparaten wegen fehlender Informationen über die dominante Hemisphäre der Verstorbenen aber natürlich nicht überprüfen (Abb. 1). Bekannt war aus diesen und anderen Arbeiten, daß im unausgewählten Sektionsgut im Mittel 73,5% aller Hirne eine in ihrem Ausmaß variable, linksgerichtete Asymmetrie des Planum temporale zeigen [Übersichten bei Steinmetz (1992), Steinmetz et al. (1990)]. Nicht bekannt war, ob dies lediglich eine anatomische Spielart ist (vgl.

So ist zum Beispiel die enge Verbindung von Praxis- und Privatbereich von existenzieller Bedeutung für niedergelassene Ärzte.
